Hmmm......ran into that situation once myself.....tryed to use
a 9 head 72 meg seagate drive on a 386 mother board, (AMT, if
memory serves)....at any rate, the silly thing would not accept
an odd number of heads. Finally, out of sheer frustration, I
formatted it with a setting of 8 heads. Ended up with 63 meg
instead of 72, but worked fine. Try it with 15, worst case you'll
lose a few megs, and preserve your sanity. :)

Paul Clark

Ps: later found out Seagate provided special formatting
software for those drives......grrrr!

Cross-posted to:
comp.sys.atari.8bit,comp.sys.atari.st,alt.atari,misc.forsale.computers,alt.video.games.classic,rec.games.video.classic

I was curious as to the current price for a used portfolio. B&C has reconditioned ones for 189.00....YIKES !!!! This thing is ten years old and surely is not still worth that price running XT-technology. Anyone have one for sale and wanna shoot me a price ?

Tony

5. Re: New Atari Site

Message-ID: <01bd8cba26066180e612e8c3@default>
Source record: 62417

Yup, as stated in my original message.

I'll post up some screenshots and improve the site over the next few days.
Actually, the screenshots of my Unfinished Projects may have to wait until
I figure
out how to do it ... I haven't got an SIO2PC cable (or room to set up both
PC and
Atari in the same room) so I can't just transfer my progs over to the PC
and use
a screen grabber util like Neograb.

Anyone have any suggestions on how to take piccies of screen displays?

Regards,
David

6. WTB: Omnitrend's Universe

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-01 00:00:00 UTC
From: nrichar@sun.science.wayne.edu
Message-ID: <nrichar-ya023580000106980921090001@141.217.1.38>
Source record: 62418

I may not even be remembering the title correctly, but I'm looking for the game Omnitrend's Universe. I remember playing this for hours as a kid and would like to purchase a copy if anyone has one for sale.

I think it came on 4 disks and had a huge manual. Basically it was a space-based rpg where you could mine, trade and commit acts of piracy, using your earnings to do more mining, trading and piracy.

If anyone has this, or knows where I can find it I'd be most grateful.

8. Joystick Problem

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-01 00:00:00 UTC
From: craig_glassner@bigfoot.com
Message-ID: <3572dfc4.10484217@news.wenet.net>
Source record: 62420

After years in storage I pulled my old 1200XL out of storage and began to set it up for the kids to use. I tried plugging the joystick in, but it doesn't work. Then I remembered (or think I remembered) that there was an adapter(?) I had to use to plug into the Atari joystick port. Is this correct? What about modern joysticks - will they work on the 1200XL?

Any advice appreciated.

It has! Have you played any of the Doom (and derivatives) levels?
Doom opened up a whole new world in editing as you could change
almost everything about the game (levels, sounds, graphics, etc.).

He *has* files on there IIRC *BUT* they are just the megaimages from
Yogi's site. He hasn't even given a breakdown of whats on each so its
a gamble that you get a game you wanted.

Message-ID: <35730E43.167E@cs.byu.edu>
Source record: 62423

Once upon a time, I created a font that was an exact duplicate of the Atari 8-bit system font, using the Resource Editor that came with Borland C++ 4.5. However, I never figured out how to make it even a bit-mapped font usable in regular Windows programs, let alone a True Type font. Is there an Atari 8-bit font for Windows out there somewhere? Or instructions on how to finish my little project?

12. Pc dir to XL/XE .atr image

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-01 00:00:00 UTC
From: stack@xs4all.nl
Message-ID: <3573156e.30444783@news.xs4all.nl>
Source record: 62424

Hi ALL,

just wanted to let you all know that I've just placed a new version
of DIR2ATR and XDIR on my homepage.
DIR2ATR converts a pc directory into one or more .ATR disk images.
It now has a graphical user interface, and supports 3 disk images.

XDIR version 07.02.00 has some sligtht bug fixes.
XDIR let you access .XFD and .ATR disk images and let you
extract those XL/XE files from them.
It now supports 4 disk image types, single, medium, enhanced
and double density disks.

Let me know what you think of them.
Bo.

Source record: 62426

I was looking through my Borland C++ DOS reference manual, and came across some interesting DOS-only functions that access the PC disk directly. I imagine that these could be used quite easily to read/write Atari-formatted disks on the PC (which is what UTIL apparantly does). I can post more information if there is interest. (I don't do much PC hardware programming, but it looks like these DOS functions just translate into the proper interrupt calls.)

> Anyone have any suggestions on how to take piccies of screen displays?

1) Run the games on an emulator and use win95 screen capture software.
2) Use something like a snappy video cap (requires close PC).
3) Digital camera shot of TV picture.
4) PCTv type card (requires PC)

Anyone else have ideas?

Seems to me that a little text goes a long way.

Hey, the frames are nice, the animation is nice, and the files are
available, although poorly labeled and described. I know it's bucking a
trend on the Web, but some little blurbs (even downloadable ones) on each
megaimage would help guys who surf with PCs.

It would certainly let the guys who surf the Web with Lynx and an 8-bit
know what's there, although I doubt that they'd use an 8-bit to actually
download megaimages.

Are you listening, SArcher 119?

Sounds like when I wrote a program to read the character set out of
the OS ROM and munge it into the format my Star printer wanted for
soft fonts. That made for ideal program listings. That should be
trivial for any font format that uses 8x8 (or a multiple thereof)
bitmaps, assuming you understand the format.

I want to get a few SIO cables and was wondering if I could get some leads as to where I could find them. Someone in this NG replied to me a while back offering some for free, but after a bad computer crash, I lost his info.

At any rate, any help will be appreciated.

Thanks!

Jay

I have several SIO cables lying around. You can have as many as you like
for $3 each, plus $3 for Priority Mail shipping for the order. Not quite
as good as that 'free' offer you mentioned, but close. ;-)

Sheldon

Not to be off topic here but... have you ever played the game called
"Elite" on any computer? It sounds like a game you would like. You
can get Elite for free for most platforms it was released for. I
forget the page that has it. Post back if it sounds interesting.

.bin and .exe files are executable Atari files from Atari disks or disk
images. The .exe (and also .com) files were usually used with third-party
DOSes that had command-line interfaces, but can be run from Atari DOS
using the Load Binary command. (Don't try to run the .exe files from
MS-DOS, though ;-)

The SyQuest is a drop-in for an IDE drive - the Atari does not know from
removable. Other IDE drives seem to be ATAPI interfaces, which I do not
think will work. I think the ATAPI drivers follow some other protocol
using the IDE h/w buss.

I don't want to start a war here.... but I can certainly show you the vents in the drives if you care to come out here and look. Without equalizing the pressure in the inside of the drive, the whole head carriage and platters get tweaked out of alignment. The drive runs at low speed while stopping and starting, of course. The gunk is an accumulation of lubricant, water vapor and other volatiles that collect in the HDA. I have a number of drives that exhibit this condition that I keep around for old times sake. I don't know what you have been doing for 15 years, but I have spent the last 28 years working with customers who get hit with just this problem. Like I said, there are a lot of HDA engineers out there that wish this problem did not exist!

The old, old PCs had controllers that would read SD from what I
understand. This was not an option in the BIOS, but you can get under
the OS and make them work. This was back when the PC didn't even have a
floppy unless you paid extra - you got a cassette interface and BASIC in
ROM.....

35. Activity vs Atari

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-02 00:00:00 UTC
From: s9700212@llandrillo.ac.uk
Message-ID: <6l0ktu$2nl$1@nnrp1.dejanews.com>
Source record: 62547

Does anyone here know anything about a GUI called Activity that was released in 1984. It ran on an obscure portable computer called the ACT Apricot FP.

The computer itself is Intel based, and it runs MS-DOS. However it also runs the Activity GUI. This is a fairly advanced GUI with some amazing features. It features shortcuts on its desktop, with user definable icons. The GUI includes tools to change Icons.

Also it includes a Mac OS style trash can.

Also it includes basic multitasking if used with CCPM.

It is also color if you plug to into an external VDU, which makes it the first color GUI.

The most amazine feature was its built in voice recognition. This allowed you to define "voice function keys" for applications and then control them by speaking into a microphone.

It is clearly an amazing machine, with an amazing GUI.

Does anyone know how it fits in with the history of Atari?

If you have any information I would love to hear it.

Thanks in advance.

40. Re: Writing ATARI DS/DD disks on a PC drive

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-02 00:00:00 UTC
From: Underdog <xxx@xxxx.org>
Message-ID: <3573E7F3.BB9818F9@xxxx.org>
Source record: 62552

That very well may be true. Back in 89-90. I used to be a compuserve member and had found a file that allowed me to read and write to Atari 8 bit SD disks on my 360 k drive on my XT. Since then I have lost that file and when I tried to get it off of compuserve. The 8 bit files were all gone. I've never seen it since. Can't even remember what the file was called anymore. But damn, it worked and worked well. Only problem was that it could only read and write SD disks and not the enhanced disk. Other then that, using a happy drive was my only other option. But you have to use your PC to format the disk as a 160k SS or was that 180 k? Oh yea, 180 k format from the PC. Then the happy would read and write to it. Think the format command on the PC DOS was "format drive:/F:180. I know this won't work on HD 1.2 drives on a 360k disk. But if you have a DD/DS drive it will work. or was that on a SD disk only. Like I said. Did'nt work to well on my HD drive when I tried it on a DD/DS disk. Oh well.

Actually, I think I spent most of my youth playing Elite on either the BBC
Acorn computer (did it come out on this platform first), then the
ZX-Spectrum. Probably one of the greatest games to come out for home
computers, it's a shame there isn't a recent update (Elite 2000 anyone?)

Maybe I'll go back and play that until I can turn up a copy of Universe :)

43. Atari-bot upgrading...

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-02 00:00:00 UTC
From: Patrick Robbins <Probb26666@usa.net>
Message-ID: <35741a94.0@news3.uswest.net>
Source record: 62555

For anyone who remembers my Atari-bot plight a while back, here I am again. I have a few relatively unrelated questions, so bear with me.

I still need to know, byte for byte, what typically happens at the serial port when one uses the l-print command with a working printer. This is so I can interface the super armatron and use it as a serial device. I could also program the microcontroller to emulate a disc drive or whatever...

When I boot the 'bot now I have to plug it into a disc drive to load the program. How would I go about making a cartridge so the thing will be self contained? Can I use eeproms somehow?

As far as programming goes, I'm not very advanced. I don't know how this higher level stuff goes either, but can I write a program on my pc in fourth or something and compile it in 6502 assembly? What would I do with it then?

Finally, I'm using the XE game system in the thing. It seems to me that I would have some more expansion options if I had a parallel port. I don't know what I would do with one although I remember Best Electronics used to sell an experimenters kit. Forgive me if this turns out to be naive, but aren't most of the lines on the parallel port the same as those on the cartridge port? It might be easier to modify the computer by bringing out the additional lines if I need them, rather than retrofit the thing with another computer, like an XL.

Thanks,

Patrick Robbins

Source record: 62557

(Bob Woolley (damn I can't remember the spelling), says
it may be possible to 'get under the OS' to read A8 sngl.
dens. disks).
I've heard this may be true, but I sorta doubt it, if
the controller won't handle FM, I don't think any coding
is going to make it do it.
Rick Cortese told me that there is a single 'line' that
is omitted from almost all pc floppy controllers that
could be 'reconnected' to make FM work. Someone also
mentions some C library routines to handle 'unconventional'
disk formats. I suspect those would be calls to the
BIOS disk routines, and again wouldn't overcome the
problem of the controller just doesn't do FM.
I've tried ANADISK on sngle dens disks, it just
won't work, even on the oldest XTs I have. There
may have been early, early pc that would do FM,
but those would be harder to find than the

'catweasle', which is I guess a combination software
and floppy controller.
Like I said earlier, basically sngl density/FM can't
normally be done on a pc. Yes, sngl density MFM,
as somebody mentions, for 'enhanced density' will
sorta work. And you can set a 1.2 meg floppy to
properly read/write in a lower signal level
360k floppy manner, but you have to code to do it.

Totally agreed. Seems most sites prefer to get a banner on and center
the site around them

: computers, it's a shame there isn't a recent update (Elite 2000 anyone?)

Actually, enterprising programmers on a number of platforms have actually disassembled the Elite code and have made modifications and enhancements.

The best known is Elite A for the BBC, which is a pretty major overhaul. You can fly different types of ships, buy lots of new types of equipment, run missions, and so forth.

There is also Elite 128 for the C64/128, which has a few less drastic changes but supports such niceties as 2mhz mode for the 128, a frame limiter (so that the game isn't unplayably fast on 20mhz accelerators), "docking service" (a pay-per-use docking computer), missions, and other neat things.

Hmm.. I won a copy of that in a programming contest a while back and I
never explored it much.. Perhaps I'll now have to look into making a
True-Type Atari-style font.

53. GTIA Register VDLAY ($D01C)

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-02 00:00:00 UTC
From: dmlloyd@earth.execpc.com
Message-ID: <6l206q$lhp@newsops.execpc.com>
Source record: 62565

Does anyone know what the 'VDLAY' register does in the GTIA? My SAM'S book says 'Vertical delay; used for moving players or missles in their 1-line or 2-line resolution formats'. But that doesn't help me much... I've been unable to find a reference to this register in any other of my books.

Also, is there anyplace I can get technical documentation on the specific chips used in various Atari 8-bits (like POKEY, GTIA, ANTIC, and the 7800 graphics chip)? Any help is appreciated.

54. TAF MonSTEr Flea Market July 11th

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-02 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35748fbb.0@diana.idirect.com>
Source record: 62566

SATURDAY, JULY 11TH, 1998 is the date for the Toronto Atari Federation FLEA MARKET! The doors open to the public at 1:00 PM and will remain open until 5:00 PM.

This may be your 'last chance' to come to a bazaar of Atari related pre-owned hardware and software where you may find that peripheral, application or utility for your ST/Mega/TT/Falcon 16/32-bit computer system or your XL/XE 8-bit classic computer system.

Not only is this an opportunity to buy or sell hardware and software for TAF members and other Atarians, this will also be an event whereby you can learn what you can still do with an Atari, including the Internet, Desktop Publishing, Scanning OCR, MIDI, and much, much, more! There is a confirmed Internet Demo (using the suite of available Internet prgs. running under STiNG), Howard Carson of MGI mentioned that he would be showing Calamus SL-98, and Martin Nueland will do a MIDI demo.

If you have original software or hardware that you no longer have any use for, get yourself a half-table and try to sell it! Or find that treasure that you have always wanted. Great deals should be in abundance.

We are anticipating a good turnout and hoping to have some dealers at this event and thus TAF has booked a larger hall to accomadate everyone. To help defray some of TAF's costs of the event, the following will apply:

Half-Table's will be $5.00 or the Full-Table for $10.00 each. Half-Table's are FREE to TAF MEMBERS. Admision is $2.00 per non-member family but if you are selling and have taken a half-table or more, admission is included. Admission for TAF members is, of course, Free.

The Flea Market will run from 1:00 PM to 5:00 PM, with setup commencing for sellors after 12:00 PM, noon, and teardown after 5:00 PM. This should allow enough time for as many people inside and outside Toronto to attend the event.

As usual, piracy cannot and will not be condoned. You must be selling original pre-owned software only. If anyone is caught selling pirated software or stolen hardware, they will be dealt with severely!!

The TORONTO ATARI FEDERATION Flea Market will be held in the "Gold Room" of the North York Memorial Community Hall on the Lower or Concourse Level of the North York City Centre Library Building at 5110 Yonge Street (next to Mel Lastman Square) at Parkhome Ave. Parkhome is 5 stoplights North of Hwy 401 running East off of Yonge.

Parking garage inside the complex - enter next to the Novotel Hotel on Parkhome Ave. Those comming by public transport can take the TTC's Yonge Subway, North to the North York City Centre Station, then walk through the tunnel into the concourse, down to the food court, turn left and find the Memorial Hall on your right.

Saturday, July 11, 1998, 1pm - 5pm for the TAF "Flea Market. To contact TAF on booking a table or tables:

I move stuff from my PCs to my Atari disks with the Myutil thing
which you can get at the umich archive. (It tells about it in the
FAQ) It works good for me which may be because (according to GTRPM)
my Indus GT spins at 297 RPMs instead of the normal 288.(just an
educated guess)

Maybe you missed some of the earlier postings on this tread... I'm already
in the middle of creating the Atari TrueType font (with versions for both
Mac and Windows). It should be done within a week. I will post information
on how to get it on this newsgroup when it is ready.

(FWIW--I've done a number of commercial fonts for both Macs and PCs so I
know what I'm doing. This will be a professional quality font.)

I think you might find answers to both the printing and disk emulation questions by studying the SIO protocol. Its pretty simple, but you could develop both a printer device and a disk emulator in a microcontroller. Frankly, it might be easier to just do all your control logic in the microcontroller anyway, unless you really do just want to have the brains in a Atari (makes sense to me...!)

As far as carts are concerned, yes they use plain old eproms- you can find them from a variety of sources, as well as programmers. Jameco and JDR are 2 such suppliers. One possibility is to get a cart for which you have a duplicate, or one thats dead, unsolder the eprom(s) and replace them with sockets. (Use zif sockets if theres room) Then burn your code in and off you go. There are a couple hurdles in burning your own roms- first is the program- it has to be compiled/assembled to run at an absolute address (which pretty much eliminates Basic unless you do some fancy stuff). If you were on an 800, you could use it to code for the right hand slot with the Assembler/Editor in the left, for example. The problem is then loading the code into the programmer; it could include uploading the code to a PC, formatting it and then burning. It will largely depend upon the capabilites of your eprom burning hardware. This route requires understanding the underlying architecture, as well as a pretty detailed understanding of the Atari memory maps and OS.

Probably the microcontroller route would be easiest.

From a kludgy perspective, you could grab an 850 and send simpler RS232 commands right to your gizmo without messing about with SIO. It still leaves you with the bootup problem however.

Good luck,

Gregm

David,
Mapping the Atari (Ian Chadwick) says it is used for one line
resolution movement of players when two line resolution is set. if DMA
is enabled then you can move the bitmap of the object around in memory.
Something like that, anyway.

It really depends on what you want to do. If you just want the files to go to the PC in their original form, you can use MYUTIL, or UTIL, or SR, depending on the DOS, the density and the arrangement of sides you have. You can also do it by running terminal programs on both machines with a null-modem cable. You can upload the files to a friendly BBS and then download them with the other machine.

If you're looking for .ATR or .XFD images of your files, then you need an SIO2PC cable running SIO2PC or A.P.E. software, or you need something like the A.P.E. PRO cable or the XFormer cable.

It's not a matter of plug it in, press a button and, PRESTO!, but I've managed to do all but the PRO and XFormer cable things, and I'm not a tech genius. The documentation that comes with the hardware/software used in the various methods will help, but you have to read it and follow it step-by-step until you've done it a few times.

65. Re: PC - 8bit: how easy is it?

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-03 00:00:00 UTC
From: Eric Sokolowsky <esok@cs.byu.edu>
Message-ID: <357596FD.167E@cs.byu.edu>
Source record: 62575

I've transferred files from the 8-bit to the PC in a number of ways:

1. Use a serial connection. On the PC end, it requires a terminal program, such as the terminal program that comes with Windows 3.1. Note: I have had much more success with this simple yet functional program than with the "enhanced" program that comes with Win95 or WinNT. On the 8-bit end, it requires a machine with a disk drive and an 850 interface or P:R: connection (or Black Box, or MIO, etc.) for the R: device. Then you need a terminal program on the Atari as well (Bobterm works well). You also need a null modem connector between the Atari and the PC. I have had good success with this method, and it has the advantage that each individual Atari file becomes one file on the PC.

2. Build an APE PRO cable designed by Steven Tucker. On the PC side you need the APE PRO software. On the 8-bit side, you only need an Atari disk drive. You use the PRO cable to connect the Atari disk drive directly to the PC. The PRO software will allow you to create .ATR images from any 8-bit disk, which is helpful for emulators or for using the regular APE software with a real 8-bit. The PRO software will also make backups of copy-protected software.

3. Use the Util, etc. programs mentioned earlier in this thread to read Atari disks directly on a PC floppy drive. (I haven't tried this method.) However, as far as I understand, these programs will only read Atari double-density (256 bytes/sector) disks. It seems more of a pain to copy single-density disk files to double-density disks than to use either of the methods above.

Cb> (thinking)....
Cb> I put pac man load file in a pc directory. I run this proggy
Cb> and now I have a disk image with pac man in it. Wait...
Cb> Now I can load my pac man into a emulator. I think.
Cb> Is that it?

Well, hmmmm, you're right and you're wrong.
If you want to run Pacman using an emulator you could load Pacman directly into Xformer directly from your pc directory without even creating a disk. Xformer takes care of that doing it for you.

If you want to run games on your orignal XL/XE, you need to put (pc) Xl/XE files into a disk image first, and load that disk image into SIO2PC or APE or other disk emulator, before you can use it. There are already some .ATR disk images out there, and most of them are just fine. But if you want to make your own disk images, how would you "create" one?
Probably loading multiple disk images in SIO2PC or APE, and use your Atari XL/XE to copy stuff from one disk to another.
If you don't have an original Atari, you probably would use Xformer and load multiple disk images, and then copy stuff around.

If you first use XDIR (an disk image extraction utility), you can place all your favourite games in a directory called GAMES, and then let DIR2ATR create a disk image (or more disk images depending on the amount of data) of it. This way you don't have to load and unload disk images in an emulator and saves you a lot of time.
If you have to convert the Umich archive to disk you'll be glad to have an utility like this ;)

Bo.

Hi. I'm looking for the following cartridges for the Atari 8-bit computers.
Contact me if you wish to sell any of these cartridges. Here goes:

Bounty Bob Strikes Back - Big Five
Seafox - Broderbund
Monster Maze - Epyx
Boulder Dash - First Star
Bristles - First Star
Flip and Flop - First Star
Tutankham - Parker Bros
Ant Eater - Romox
Attack at EP CYG 4 - Romox
Flapper - Romox
Fortune Hunter - Romox
Princess and Frog - Romox
Spark Bugs - Romox
Starion - Romox
Topper - Romox
Typo - Romox
Whiz Kid - Romox
Super Zaxxon - Sega
Tapper - Sega
Up N Down - Sega
Jawbreaker - Sierra Online
Jawbreaker II - Sierra Online
Oil's Well - Sierra Online
Sammy Lightfoot - Sierra Online
Alpha Shield - Sirius
Capture the Flag - Sirius
Fantastic Voyage - Sirius
Worm War I - Sirius
Chessmaster 2000 - SoftCountry
Frantic Freddie - SpectraVideo
Drelbs - Synapse
The Pharoah's Curse - Synapse
Picnic Paranoia - Synapse
Shadow World - Synapse
Survivor - Synapse
Carnival Massacre - Thorn EMI
Matterhorn - TigerVision

I have NEW Colecovision Super Action Controller packages and NEW Colecovision
Super Roller Controller packages for trade if anyone's interested. Thanks for
looking.

From: Pete Shay <pshay@primenet.com>
Message-ID: <3575C7E5.7BCF@_ibm.net>
Source record: 62582

I found a shop today that has a ton of classic Atari stuff. Lots of 2600 games NIB. Other items were 5200 games NIB, 5200 joystick controllers NIB, 400/800 software NIB, Intellivision games NIB, wireless 2600 joysticks (used), Atari driving controllers NIB, etc.

Stuff I bought from them today includes:

2600:
Adventure (NIB)
Star Raiders (NIB)

5200:
Gremlins (NIB)

800:
OSS Action! (NIB)

Located in Phoenix, they are an Atari dealer from the very beginning. They are trying to unload all of their classic stuff. If you want a contact name & phone# drop me an e-mail.

thanks....
pete

Where to begin... First, I remember seeing some technical article on the Sio protocols somewhere but I can't find them again. As for the Atari, I didn't know anything about single chip microcontrollers when I began this project. Now it has become a crusade to give my first computer (literally) a body. I don't think a 68hc11 in single chip mode has enough memory for what I want to do anyway. Oh, I also want to use some speech synthesis software or maybe a Covox Voice Box or whatever. Anybody know about these?

I do have some other options for controlling the arm although I won't bother with the details. If possible I'd like to be able to communicate bi-directionally with the hc11, which is why I mentioned disc emulation. On the other hand, if I can hack my own parallel port I would have alot of more I/O options, wouldn't I?

I've got an old 5150 with two 5 1/2" full-ht. drives. Where would I
find info on doing this ? If so does this mean I could dispense with
the SIO2PC cable ?

ciao larry

Those who forget history are doomed to repeat it.

76. Using Util to read atari disks on a PC 5 1/4 drive

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-04 00:00:00 UTC
From: AKatz712@juno.com
Message-ID: <6l530b$7lg@bgtnsc02.worldnet.att.net>
Source record: 62338

I finally got a 5 1/4 inch floppy drive and used util to read the files onto my hard drive so I could run them in the emulator.

I have alot of original work (mostly in basic) and copied by hand listings from magazines. I can email my list and files to anyone interested.

My question is: I could not recover all my files. I get the message that repeats : 5 times tried and goes on and on and then I have to start over. When I examine the disk with Anadisk I found that the disk had Gaps in sectors. Does anyone know what that is and can it be fixed? Is it due to the extreme age of these floppies (written in 1983 or 1984)? I also read that Atari drives ran at a different speed (I used a Rana 1000). Could that be the reason?

Can binary data be recovered from an anadisk dump?

Note: I also found a program which can be adapted for reading my old cassette tapes by reading a .wav file. It is a tedious prospect. But I think I have most of my floppy stuff on cassettes as well.

Abacus publishing has a series of books on PC Hardware &
systems programming. The first version published was called
PC Systems Programming; the latest version is called PC Intern.

The first book included the DOS/interrupt routines needed to
read/write individual sectors in C, Pascal, and GW Basic. There
are a number of PC references that address this topic, but the
Abacus book presented complete programs to do it. I used the
GW program to R/W Atari disks, but it has been several years,
so I don't remember all the details. I do remember that I had to
add a value to the byte values returned by the PC. "1", I think . You might
try to contact Abacus to check on the availability of the original book/disks.
(I haven't looked for it in the most recent version.) I never did anything
heavy with this, just hacking to
see what could be done.

The only phone number that I have for Abacus is 1-800-451-4319,
which is an order line.

If you are implementing double-line resolution PMG's then this register can
temporarily move the player down by one scan line.
>

The best source for the custom chips, is the Tech Ref notes. In particular the
Hardware Manual.
If I'm not mistaken, it's available to read online . Try going to the FAQ's
You can still buy it too!

Don't forget the mission! To find the Hyperspace Booster because communication wtih earth is mysteriously broken.

>
>If anyone has this, or knows where I can find it I'd be most grateful.

I sorta have it. I have copies of the original 4 disks, and copies of some of the more necessary pages from the manual. I suppose you want the whole thing though. Did you know it is downloadable and runnable using an emulator on a PC? I haven't tried it yet though.

From memory I think GEM was first shown about around 1983 or so. The ST
had in in 1985 and the PC just before. The Mac would have been around this
time. Plus there were a few DOS GUI type things that multitasked and
simulated windows via character based graphics. Of course, Xerox had full
GUI systems long before. When did the Xerox Star come out? Late 70's?

From what I've heard, Amiga owed Atari money so this is why Atari made low offers. Besides, Atari was developing the ST and had no need for a second 68000 computer. If Amiga defaulted on the loan, the Amiga would have been Atari's.

Am I way off here? I kind of want to get the real story behind this and there are tons of variations floating around.

Try:

ftp://ftp.sodre.net/pub/users/cmwagner/atari8/mirrors/ftp.hackerz.com/

These are in ATR format, so they're not compressed, but you should get
similar
compression from your modem (use Windows sysmon and you'll see what I mean).

Source record: 62349

You are right, a 68hc11 would likely not have enough on-chip resources to handle both disk emulation and robot control. There are lots of alternatives which might suit your task. We use Blue Earth Micros a lot (www.blueearthresearch.com), they are 8052 based SBCs, lots of RAM onboard, hardware uart, programmable in basic and assembly with lots of public domain tools available, and you won't need an eprom burner. There are others with similar capabilities.

You could operate the SIO hardware directly from Atari assembly or Basic (or other languages if you want), to implement your own protocols, but you would still have to deal with bootup- either you add a floppy drive in place or learn the floppy protocols and write an emulator, theres not much choice there.

Hacking a parallel port does give you greater flexibility. With an 600/800XL, you could add a bunch of digital I/O lines directly addressable in the Atari address space- you'll need to understand the Atari memory architecture (not to complicated, however) and learn some digital electronics (address decoding, chip selection, read/write strobes), but all in all, it leaves your software complexity in the Atari instead of splitting it between both the Atari and your uController. Consider an 8255- its a single chip I/O device, it offers 24 digital I/O lines, each is configured in software as input or output. Its an old design and shows it in several ways, but it is convienent and appropriate for the scale of your robot. It was originally an Intel design, but is manufactured by lots of companies, Jameco and JDR (likely Mouser also) carry it.

A little background might be in order here. After reading this newsgroup for a
while, if I remember correctly, Terry Ortman's name crops up from time to time
as someone who posts things for sale, takes money, then sends the items which
sometimes get lost in the mail. If you're out there, Terry, is this about
right?

Anyway, if Terry's record is a public record, then I'd think nothing is wrong
with posting it. Any lawyers out there?

I worked with an 8-bit Mitsubishi M37450 Microcontroller and did think it would make a nice replacement CPU to base a Atari 8-bit around. On-board facilities such as Serial I/O, D/A and A/D converters, 16 and 8 bit hardware timers could be well utilised and it runs upto 12.5Mhz. Its instruction set is 6502 based with additional instructions such as multiply and divide. Has anyone else seen these?

96. Beginner needs help with SIO2PC cable and APE!!

Newsgroup: comp.sys.atari.8bit

From: "J. Reyes" <fixit@fred.net>
Message-ID: <6l79g6jrm1@news12.ispnews.com>
Source record: 62358

I just downloaded the APE shareware program and installed it on my 486DX4 100 MHZ PC. Using the schematics provided at the APE web site I built a cable, checked the connections and the pinouts with my DVM and everything checked out, at least the physical connections on the cable.

I am running APE, configured the COM port, set it to 1 chip version. Then I try to find the ATR file the APE documentation claims is included, but it's not there. I load up a PRO file on my APE drive 1 and connect both computers and power up and absolutley nothing happens.

Is there some tricks or tips to building this cable that I am overlooking? Does anybody have a tutorial that step by step tells you how to set up APE (The instructions included are not exactly user friendly). I should mention that I have a college degree in electronics so I have double checked the cable I built and as far as voltages, continuity and pinouts, everything's hooked up right, so I would appreciate input other than "... are your wires hooked up right?". I have checked all the obvious things.

Any ideas?!?

Thanks for any help you guys (and/or gals) can provide!

Hello,

I'm wondering if anyone else had any trouble getting sound under
Atari800win. I'm running Atari800win v1.9b2 with a Soundblaster 16 PnP.
It works great, but no sound! Do you need to run the soundcard with
specific settings? Just for reference, my soundcard is set up as follows:

set BLASTER A220 I5 D1 H5 P330 T6

And yes, I have the "Disable all sounds" option unchecked.

Thanks for any help or leads.

Well, you should know who he is. He spams this newsgroup every 6 months
with things like...."Atari 400 for sale.....$75.. Original COST....$399!!"
and other such nonsense. He does not have a good reputation for sending
product which people do get duped into purchasing. Although, he recently
sent a gentleman in Norway a portion of what he purchased for a high price.

Do a search on Terry Ortman with Deja News before you start flying off the
handle. You will see that it is indeed useful to know how many times Terry
has been in trouble with the law before you send this individual your hard
earned money.

106. XL-it 8-bit emulator

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-05 00:00:00 UTC
From: David Austin <daustin@avnet.co.uk>
Message-ID: <6lbp64$o46$1@supernews.com>
Source record: 62292

Wonder if anyone can help me with a small problem.

I have downloaded and used Markus Gietzen's XL-it emulator. It truly is excellent, and works no problem when run from the DOS prompt within WIN95.

I then tried to run it under DOS as it was a bit slow for some games under windows. I do not have DOS installed on my PC at all (I cannot boot using F4 at startup for DOS as I have only ever had WIN95). I have booted the system from a DOS 6.22 boot floppy. In every respect this works except that when XL-it initiallises it says "error initialising soundcard" and I get no sound and no joystick control. Does anyone know what to put into my autoexec.bat in order to get it to see the soundcard/joystick controller.

PC is 486 133MHz, soundcard is third party with ESS chipset (ES688/968). I have no manual for the soundcard, but ESS say that this chipset requires no driver to work under DOS.

Hoping for an answer so that I can re-live the 80's! (800XL and 1050s are still packed away after moving house. Desperate for a fix of Dropzone!).

107. Re: Syquest EZ-135

Jim,

I have been using an external/turned internal Syquest EZ-135 SCSI drive
for sometime now with my other Black Box.

I did have to get internal board terminators from Syquest (for free in an
envelope) for the EZ-135. It is my only SCSI device.

Works great for me. I have several partitions formatted with a couple
of them at almost 16megs each.

Want my numbers?

Tom

Where?

I went on there and the "contents" frame was the only thing to have
anything meaningful in it.But all the hyper-links are zero characters
long.So I just see:

[LINK]

[LINK][LINK][LINK][LINK][LINK][LINK][LINK]

[LINK]

As you can see,Lynx shows zero-size hyper-links
(that is,hyper-links that have to text to them)
as "[LINK]".I guess you just have to experiment to find things...

huh?
I didn't see any files.I even used that Lynx thing to emulate NetScape
as far as comments/remarks are concerned,
(press ' to see what I mean)
in case it was a place like www.scifi.com where half the stuff is
commented out,and STILL didn't see any files.

>
> I was wondering how it fitted with the atari OS. Which came first etc.

The Atari OS was first seen in 1979.
It beats MS-DOS in that DOS can be loaded as a simple device handler.The
MS-DOS network re-director does this to some extent,
but you can only do what is possible with MS-DOS.Just look at
MSCDEX.Long filenames have to be converted to 12 (11 with FCBs)
characters.And all files have to look like they're write-protected for
some reason.

Now look at SpartaDOS and all the features it introduces like more
attributes for the files and longer filenames.
(to indicate file location within the directory tree)
And no direct-access FCBs to complicate everything.
And real wildcard support,which SpartaDOS takes advantage of.
(only available using direct-FCBs under MS-DOS,the new UNIX interface
introduced with MS-DOS 2 doesn't allow wildcards)

Now if only the SpartaDOS bugs were fixed in SpartaDOS X...
(and disk SpartaDOS?)

Any DOS calls go through the BIOS unless you've loaded a floppy device handler that doesn't.Of course it would appear as drives other than A and B since a new disk-drive handler can't replace a existing drive letter.
Anyway,the BIOs doesn't have a option for single density,whether the controller supports it or not.

> 'catweasle', which is I guess a combination software
> and floppy controller.
> Like I said earlier, basically sngl density/FM can't

Single Density IS FM.They mean the same thing.MFM means double density.So "sngl density MFM" is a contradiction in terms.Dual ("enhanced") and double density are the same density,different sector size.And IBM double density is a different sector-size than both Atari's dual and double.That's why you can fit 400k on a 360k floppy.

But BobTerm needs to be able to get the file-size of the file it's sending.Else a 1-byte file will become a 1k file on the IBM.(using Y-MODEM)
This means using SpartaDOS.Perhaps Kermit65 doesn't have this problem but I don't know enough about Kermit to tell you.
The problem is the Y-MODEM is just not very good.It's useless for Atari,Commodore and Apple since it requires knowing the file-size at the beginning of the transfer.But on all our computers you only know the file-size at the end of the transfer.A special transfer protocol is really need.
(maybe Kermit)
Otherwise Y-MODEM will yield files either 1multiple of 128 or 1024 bytes.

One thing that might help is that Z-MODEM is made to send growing files.I've read about that in the Z-MODEM specification but have not heard it mentioned anywhere else.

Besides the fact that the files are listed as type 5 (PC Binary) instead of type 9 (Binary),I have no idea.The problem with missing extentions has existed for over a year.You might use WHATIS so that you don't try un-ARCing a DCM file and un-Diskcomming a ARC file.

Remember that when you try to view a file and it actually views it rather than giving you the download prompt,then you can't download it unless it's ASCII text.Forcing a download will just give you a corupted file.

The problem is your condescending attitude, Mr. Adult Fucking Know It All.

You didn't even bother to perform a simple check by verifying that a
convicted felon's record is public knowledge before you reacted and fired
off an email to someone's ISP.

Go back to your crib where you belong!

The only time this was ever a problem for we was when I tried to bid during
the last minutes/seconds of an auction. I usually just do myself the
favor of using thier proxy bid system, and entering what im willing
to pay early in the auction.

It comes from an overzealous GUI web developer who doesn't know the first thing about the ALT= tag.

I use GUI editors for web stuff too, and my advice to anyone who wants to create Atari sites is to make sure that EVERY graphic has an ALT= tag to textually explain what the graphic was. A lot of Atari fans actually USE the Atari to surf the net, so they'll never see the graphics. Atari website designers should get a copy of the Lynx browser for their respective platform; it's free, and it's the same thing most (if not all) Atari webbers are using. Lynx will definitely change the way you look at web design, as long as you're willing to do it. IMHO, if your target audience is Atari 8-bit computer users, you're better off creating a site that Atari 8-bit computers can view. (And don't listen to the BS that Lynx doesn't handle frames. On my DOS version, at least, it handles frames just fine, as long as you give the frame an ALT= tag).

Stay tuned for the address for my Lynx-capable 8-bit site. As soon as I work out a TABLE problem I'll post the address here.

>specific settings?

I'm not positive, but I think you'll need the DirectX 5.0 drivers from
www.microsoft.com; if that doesn't work, I'm not sure what else to try. I had
some problems myself, and here's how I configured mine (using a SoundBlaster
AWE64):

Playback rate: 31.920 Khz
Playback method: Use DirectSound
Force Primary mode: checked
Volume: FULL BLAST!!!

One other thing to check is your Wave volume control. The volume setting in
Atari800win is a percentage of your volume setting in the control panel (i.e.
If your main volume is set at 50%, and your A8win volume is set at 50%, your net
volume is 25%, not 50%).

I hope this helps,
Steven

>hooked up right?". I have checked all the obvious things.
>
>Any ideas?!?

I also know quite a bit about electronics, so please don't be offended by this question: Are you SURE you have the correct pinouts on the SIO end of the cable?

If you have a 130XE, the manual shows you the pinouts for the SIO port on the Atari. Unfortunately, they aren't numbered consecutively, which can lead to a major headache. This was my number one problem with getting the wiring right. If you need the diagram, please let me know, and I'll try to scan it in for you.

I use SIO2PC myself, and I had a few software problems that might be worth mentioning. The first problem is that you can't run SIO emulation in Windows, especially on a 486DX4 100Mhz (that's the same machine I use for this, so I know). You didn't say whether you were trying to run APE in Windows or not, but definitely DON'T. The SIO port on the Atari has very critical timing, and multitasking OS's wreck this timing, so boot to DOS for sure (of course, that ruins your long file name stuff). The other thing that may be a factor is your COM port. If you set your port to 1 and it didn't work, try setting it to 3. Likewise, if it's set to 2, try it on 4, and vice versa. Sometimes the system BIOS reads the COM ports differently than Windows sees them, and I've seen cases where a P-n-P modem is read on COM3 in Windows when the BIOS knows it's on COM1. Serial ports can have the same problem. (BTW: I'm not making this up, I'm a network administrator, so I've seen this phenomenon first hand).

Another note: You may want to get one of the Atari emulators for the PC to test your .ATR files. Once you know they're good, that rules out a file problem.

Good luck, and happy 8-bitting!
Steven

I did something once that caused sound to be turned off, and I
couldn't get it turned on again even though I had the "Disable all
sounds" option unchecked. I finally had to use regedit to go into the
registry and turn it back on. Search for "atari800win" and make sure
the soundstate is 0x0000001.

Why should I check if it's public knowledge? I know almost for sure that
it's illegal in The Netherlands to intrude somebody's privacy in such
a way. That's why I stated "I don't know about the US, but...". Reread
my post. And a lot of people kindly provided me the information by email
and didn't lower theirselves to your level. Now please leave your fathers
email account alone.

I had to run when I tried to reply before so I dispensed with the usual pleasantries. Internet Explorer said it was rude for 80% of my message to be quoted from yours so I made liberal use of the delete key. I hope the frivolity of this paragraph isn't against proper netiquette.

For now I'll try to get the arm going. I'll worry about the boot up problem when I have a program worth it. Maybe I can turn my bad XF551 into a 3.5" drive and have the computer lug that around. That sounds good because then I'd be able to store sensor information on the nonvolatile disc so it won't forget everything. Now how would I store and retrieve generic information like that? I think I saw something about advanced disc drive usage in basic but I don't remember where it is either.

Thanks for the help.

(About somebody posting a 'rap sheet' for Terry Ortman)
Ivo is probably correct. It is a crime of some sort to
access court records, I'm not sure, but I think court records
of the type posted are supposed to be more secure than
,say , financial information on a person. I don't agree
with the law, but I think that is the law.

Yes, you wouldn't even think of doing that because you are so ignorant. To you, the world must revolve around the Netherlands.

Terry Ortman lives in the USA and swindled numerous people over more than ten years. If you don't want to be bothered with his record, then just get lost. No one is asking you to be concerned with American justice or the Freedon of Information Act.

Now get off your parents' computer, child. You've done enough damage for one night. Your mama has your baby bottle all warmed up for you, Ivo van Poorten

Well, as a graphic designer/Art director who is an atari buff AND has created fonts I just want to post some of my humble opinions on this matter...

First off...I LOVE CorelDraw. One of the, if not THE best vector drawing programs ever created....

That said, You know I am not railing against a program i don't like when I say CORELDRAW SUCKS for creating fonts.

Draw the characters in Corel, yes! But to make the finished file, rely on somthing like Fontographer from Macromedia. Corel made TTF files tend to be unstable and just are not very good. Acceptable though it is for symbol and wingding and dingbat faces.

The storage depends pretty much on how much data you want to record. I'm an 8 bitter myself, with orthodox hardware so I'm not familiar with the XF551. Assuming I needed to save LOTS of data, I would take an IDE hard disk (even a laptop sized one), build an interface to the 800xl bus, and write a couple assembly routines (in page 6, of course... ;) , so read/write sectors. The IDE protocol is very simple and is well suited for direct microprocessor interface. Essentially you treat it as a couple poke/peek locations. To read a sector, you poke the sector number, and read command- then wait for the command to complete (watch the interrupt line), then peek it 512 times- once for each byte. Then its up to you to set up a bit of a filesystem so you can record lots of data. I suppose you could have your program read it back out and thru a serial port to a PC or something similar. There are a few IDE faqs out there which explain it pretty well. These guys (http://www.allelec.com/) have a matchbook sized 20 meg hard disk. You could likely power it right from the 800xl bus connector.

If your data storage needs are smaller, you might consider hooking up some large static ram chips in the same manner, but bank switching 256 or larger chunks into the Atari address space. You can get 256k nonvolatile static ram chips from Dallas Semiconductor- the 800xl could probably use 120ns or greater chips- to reduce costs.

But this leaves you with a rudimentary interface in Basic- you have to work with reading and writing 512 byte chunks, which is not conducive to data streams or random lookups, or files for that matter. But, it has the advantage of being relatively easy to implement hardware-wise, and you don't have to pull your hair out writing nifty filesystems. If you persisted, it might be possible to patch DOS 2 to work with your hardware, so at least you could get a familiar (if rather small) filesystem. This is all using older "standard" hardware, it seems like there are modern solutions which might save a bit of work. But, I have to say, cooking up circuits against the 800xl address bus is fun.

The reason I lean towards the bus interface is you could include a bunch of digital I/O along with the decoding circuitry for the IDE drive, so you can avoid the microcontroller complications. If you are controlling a robotic arm, timing and measuring movements becomes important, so your program complexity would migrate to the microcontroller- where you can control these things directly. Then you have to deal with some kind of command protocol, on top of whatever communications protocol you implement. Having to do this ends up complicating both the Atari and microcontroller programs because you must spend LOTS of time just on the mechanics of communicating the right stuff at the right time. If you set your Atari up with digital I/O, you can keep all that stuff integrated (in a Basic which handles

strings properly! ;))

Hi!!! I will allow $17 in trade for complete Saturn Shining the Holy Ark, $30 in trade for complete 3DO Lucienne's Quest, $30 for complete PSX Breath of Fire 2, $22 for PSX Final Fantasy Tactics or Saga Frontier. Also might be interested in Rise of the Phoenix for SNES, if it is an RPG?? Also looking for complete Ultima 1(I really want Ultima 1 for Atari 8-bit) or 2 for ANY computer as long as it is original and in good shape. All my games have boxes, ones with a * have the manual too

Here is the list:

Arcade Classics Sega * $22
Madden 98 * $20
Thomas the Tank Pretty rare, great Kid's game $20
Barney, great Kid's game * $25
Jurassic Park Rampage Edition $14
Dune * $32
Williams Arcade * $18
Side Pocket * $20
Uncharted Waters, New Horizions * $25
Theme Park rare game, great for kids * $22
Lemmings 2 * $16
Shining Force 2 * $25
PGA Tour III * $22
Phantasy Star 4 * $24
Virtual Bart * $22
Bass Masters Classic $16

SNES

Utlima Runes II $28
Arkanoid Doh it Again * $21
BOF 1 * $25
DKCountry 2 * $20
MegaMan 7 * $28
DKC 3 * $30
Boogerman $25
The Mask $18
Jungle Book $15
Earthworm Jim 2 $18
Kirby's Dream Course $17
Bust a Move * $26
Tetris/Dr. Mario * $27
Paladin's Quest RPG * $27
Jeopardy Deluxe $20
Qbert 3 $24

Breath of Fire 2 xerox $37
Lufia 2 * $37
Ultima Black Gate not sure about selling this one
Williams Arcade * $21
Mario RPG * $22
Bass Masters Pro Edition $23
Family Feud $22
Ninja Gaiden Trilogy * $27
Sim Ant $22
Civilization $33
Secret of Evermore $17
Secret of Mana complete $35
Mario Paint * no mouse $12
Super Mario World 2 Yoshi's Island * $21
Secret of Mana 3 * $32
Zelda * $20
Lufia 1 * $30
FF3 complete even the map $45
Kirby's Avalanche new $16

NES

Ultima Exodus complete (kind of, the box is cut to fit a big plastic case, one side and the top and bottom are missing $15
Ultima Quest of the Avatar with box $17
Star Wars complete $23

Thanks and please email me with any questions!!! Oh, I think shipping is $3 for up to 4 games, probably $1 more for each one or two above that.

I find XL-IT! to be by far the best Atari emulator available (for free anyway!) although it isn't perfect. The pay ones are Rainbow and XF (?) and as far as I know nobody knows how they perform as nobody seems to have bought the full versions!

I'm pretty sure that XL-IT! does let you use a PC printer - either that or Pokey (which isn't much cop now) or XF25 (which isn't that great either.) Try http://www.davesclassics.com for all sorts of emus - they have a good Atari section (under Atari 5200) and pretty fast download times.

Gareth.

The problem is that most good news servers have filters in place which stop this trash from appearing. By replying to the post all you do is make sure that more people get the message - people who otherwise wouldn't see it.

Gareth.

> offers.

I never heard anything about Atari offering to buy the company, but I do know Atari and Amiga struck a licensing deal for the chipset which Atari was to use "for videogames" for one year. I don't know if this meant arcade or home console applications. After that year Atari would be allowed to use the chips in computers as well.

If Atari was making lowball offers, it was because BOTH companies were in financial dire straits.

> Besides, Atari was developing the ST and had no need for a second
> 68000 computer.

I don't know the exact timing, because much of this happaned over the course of only a couple months. But here is the chronology as I understand it:

1 - Commodore boots CEO Jack Tramiel, supposedly cuz Jack wants to spend a ton o' bucks developing a 68000 based computer.
2 - Jack froms Tramiel Technologies and hires away much of the R&D staff at Commodore. They start work on the ST.
3 - Jack finds out Warner Communications wants to dump Atari. He buys Atari's consumer businesses (computers & game consoles) mostly for the Taiwan plant and dealer network. He fires most of the employees and cancels many projects to stop the massive outflow of money.
4 - Now that Jack has the means to manufacture and distribute his next gen design, Commodore gets worried. So they buy Amiga to counter this threat, and cancel the Atari license.
5 - Atari gets irritated at losing this technology and goes to court.

> If Amiga defaulted on the loan, the Amiga would have been
> Atari's.

I'm not sure when this loan would have defaulted (before or after Jack took over). I also do not know the final outcome of the lawsuit (I think

it was kept secret), and I'm not 100% sure that Commodore bought Amiga AFTER Jack bought Atari. Does anybody have the exact DATES that some of these events took place?

What bugs are you referring too? Many were fixed with X32c many years
ago.

I think its a painful answer...

99% of emu writers code so its for a soundblaster chipset. And most
require the set blaster line to be in there.

Seems that you might have to invest a very small amount of cash in a
real soundblaster card...

I think I'll go with the hc11 for the arm so it can handle the limit switches or whatever. I've always wanted to use an hc11 for something anyway. Everything is modular so if I still had an 8-bit club in my area I could unscrew the arm and take it to the meeting, as a complete serial device. I just want to lprint to it, so are these the right sio protocols?

1. Command bytes from computer, including ID for printer ($40).
2. ACK from arm ($41).
3. Data frame from computer.
4. Complete from arm ($43).

I'm still thinking about the parallel port. Have any idea how to add one to the XE GS? Am I right about being able to get most of what I need from the cartridge port? I don't think I'm up to building an IDE interface, although that would depend on whether or not I end up with a parallel port. How would I use the port for I/O?

Of course, I'm still open to suggestions about things I haven't asked about. What can I do about speech synthesis or recognition? Anything else?

Thanks,

Patrick Robbins

(Various examples of vulgar language quoted but then deleted in disgust. I WILL NOT put such garbage in a message I write.)

All right, guys--if I want to read language like that I can go to one of the alt.sex newsgroups. I don't need it here. All it indicates when used here is the unimaginative, immature mind of the poster.

Please, all of you who are not from the U.S., most of us aren't as crude and arrogant as this guy seems to be. I'm a New Yorker, and I'm appalled by his comments concerning the Netherlands. Just because something is done in the U.S. doesn't mean it's done that way elsewhere--or should be. We aren't doing such a good job, either. Ever hear of Jonesboro? Could be we could learn something from the way others do things.

I recently lucked into an atari 8-bit Eternal Dagger game MIB(Had to pay $16 for it tho). I remember looking for this game years ago for the PC. Unfortunately my party that I would want to import into ED is from the PC version of wizards crown <on a machine that might not work<my 386 machine in the basement>> More realistically I would want to either locate a wizards crown for atari and play through it to move the party to eternal dagger, or play on some form of emulator on the PC. If you are wondering why I do not just start a new party on Eternal Dagger -- I resent the fact that new parties in eternal dagger can only have 3 priests. My parties in WC were multiclassed to the hilt and 3 priests/3 sor max in 8 chars rankles me. I guess with the wiz crown I would need to locate some reliable blank disks to play on//make backups//etc. Happily I own a copy of both(Wiz crown for PC, ED for Atari, so no copyright problems are breached in either method).

Without respect to timing constraints, you are right about the protocol. You may have to work with time delays between the incoming commands from the Atari and the responses back. They are one the order of a millisecond or two. With single byte responses you might not have to consider it at all. You will likely have to respond to the general status request which the Atari OS sends out to check for device presence. The command is documented in the various Atari faqs out there. If you are going to wait for the arm to complete its task between steps 3 and 4, then send the complete code, that gives basic feedback and might be good enough.

Your protocol approach is adequate for sending commands but not for retrieving feedback- which limits the functional use of of your arm and indicates most of your complexity will be in the hc11. The Atari's only role will likely be sending general commands to do things- and even then you might have trouble figuring out when the hc11 is ready for the next command- or what the result was of the last one. You will likely have an easier time by using an 850 with the RS232 driver loaded. Then you have a bidirectional channel where you can control all aspects of the command protocols.

As far as parallel ports are concerned, an IDE port is just about only that- except it needs bidirectional and a couple control lines added in. Irregardless, the port will appear as a poke location. You poke 128 into it, and output lines 1 thru 7 go low and 8 goes high. Reading depends largely upon your implementation. A simple approach might be to have 2 ports, one output and the other input. Both decode to the same memory address on the Atari bus. When you poke, the output latch takes the data from the bus and when you peek the input latch drives its data onto the bus and you get the value. The R/W pin identifies what a given memory cycle is- your decode logic would use that to enable the correct port. The address is up to you.

I don't know much about speech recognition, but there is a program called SAM which is an all software speech synth which runs out of an AUTORUN.SYS. Quality-wise, it is as good as many synths you hear today and better than some. It can accept ascii text and speak it, but performs better with phonetically spelled words. It didn't run on my 800xl, but might with the translator loaded. I've no idea how to find a copy but there must be some around. There are some speech synth chips you could address similarly to the port above, but I don't know of their tradeoffs or capabilities.

hi!

I have TOP DOS 1.3.. nice dos.. had some nice features like support for ds/dd drives and other goodies like online help. Worked well with the 400/800 OS which was a bright spot if you use a ds/dd drive on an old 400/800...

(most SpartaDos versions only ran on the XL/XE OS)

TOP DOS is a dos 2.x derivative was DOS.SYS and DUP.SYS.. I dont think it became very popular though. I used to collect Atari DOS' at one time.. I think I had just about everything except BIBI-DOS and Super Dos.. (and any other Dos created overseas!)

Well Atari Rogue,under SpartaDOS X,will cause the save file to become as
big as there is room for.AROGUE keeps all saved characters in one
file.When you load a character it opens the AROGUE.SAV file for both
reading AND writing.And then it reads throuh all the records,looking for
the name matching what you typed.IF it finds it then it loads the data
and deletes the record.
(so you can't cheat)
Otherwise it eventually reaches the end of the file and that's the
problem.There's no such thing as a end-of-file if a file is opened for
reading & writing.It seems like the file goes on for ever.And it DOES
because every read past the end of file causes a write past the end of
file.So the file eats up all disk space.This seems to be connected to
the bug where reading a sparse file causes the un-allocated parts to be
allocated.Thus having the AROGUE.SAV file on a DOS 2 disk would probably
fix the problem.Which is why it's a good idea to put a MYDOS file system

on your hard disk.
(at least a small one for data files)

There's also the fact that it gets the sector-count wrong on a DOS 2
disk.
(do a DIR to see what I mean)
And sparse files will get a wrong sector-count in a DIR as well.

Oh,to get a sparse file,open a new file,POINT to some huge number ,
(1 million should be enough)
and then write a byte and go back to DOS.You'll see a million byte file
fit on a 90k floppy.But NEVER try to TYPE it as it will fill up your
whole disk.
(and TYPE will probably give you a buffer-full error under disk
SpartaDOS)
This is because SpartaDOS will try to turn it into a real file.See a
UNIX man page about lseek(2) to learn about sparse files.
(type "man 2 lseek")

I would like to know how you think about this when you're an innocent convict who has lost his job and wife because of this. Or even, if you're just a suspect. The public only thinks "well, he's a suspect, so no matter if he's released, he probably had something to do with it". Fortunately, the public tends to forget quickly.

Crime TV? Have seen that once, laughed pitiful and moved on. Say, when
do you start showing live executions? "Tonight at midnight, live from
the gaschamber, Terry Ortman! Stay tuned 'till after the break."

>get a life, Ivo. you've been living in a repressed society too long

You can't be serious. This coming out of the mouth of somebody who lives
in a country where they still have parts of the population living in
reservations, makes me fall of my chair laughing. Unbelievable.

The Atari has a chip in it called ANTIC.Besides giving you all those
nifty text/graphics modes,it reads video data and sends it to the
graphics (GTIA) chip.
(there's no dedicated video RAM in the Atari)
The problem is that it does this whenever it feels like rather than only
when the CPU is not accessing memory.
(which is 50% of the time)
It can do this because there's a special line on the 6502C (and 6502B)
that lets the ANTIC stop the CPU so that it can access memory.So unless
your chip has a similar feature,it won't work.

One idea that I had was that if ANTIC started with all DMA bits
(playfield,P/M) turned off,then you could use a diagnostic
cartridge,which is a cartridge which gets control before the OS can do
anything.Of course you'd have no picture unless you used a XEP-80.
(which would probably require a custom handler at the increased speed)

And anything that used the secret op-codes of the 6502 would probably
not work.

Now did you really have to post this big huge list here just because one
item had to do with the Atari.Why not just a sinlge sentence asking for
Ultima?

And you should really get the IBM re-make of Ultima that comes with the
"Ultima Trilogy" package.Or whatever it's called.IT has 16 colours but
the game play is somewhat altered,with respect to fight monsters on the
world map.
And,of course,it's buggy as hell!

That doesn't make any sense.You have to have MS-DOS to load Windows 95.
(I doubt that plain DOS would work)
There's no way to directly boot Windows 95.

> from a DOS 6.22 boot floppy. In every respect this works except that when
> XL-it initiallises it says "error initialising soundcard" and I get no sound
> and no joystick control. Does anyone know what to put into my autoexec.bat
> in order to get it to see the soundcard/joystick controller.

Besides the BLASTER variable,there shouldn't be anything.Like most IBM
stuff,everything accesses the sound card directly rather than using a
handler.
(that's why sounds can continue on after the programmes gets killed by
BREAK or a stack error)
Also,I'm not sure how compatible DOS and MS-DOS are.I know that Windows
95 won't work with DR-DOS.

> PC is 486 133MHz, soundcard is third party with ESS chipset (ES688/968). I
> have no manual for the soundcard, but ESS say that this chipset requires no
> driver to work under DOS.

True of most all standard hardware.That's why some old games won't work
with EGA/VGA systems.They want a real CGA card.(try the old StarFlight)
I sure wish I had a 133mhz 80486.I didn't think that they got that
fast.Still not willing to replace everything (but monitor,keyboard and
joysticks) with a PCI system.

> Hoping for an answer so that I can re-live the 80's! (800XL and 1050s are
> still packed away after moving house. Desperate for a fix of Dropzone!).

I miss Xagon and Trilogy of Apshai.

But to really have the TRUE experience,you need a TRUE Atari.Then just
get a SIO2PC cable and APE software and you can use your PC as a giant
floppy drive.
(in that it's as slow as a floppy drive,but really big)

It also has a file server function to access IBMDOS files directly.
(rather than AtariDOS files in a ATR)
But that's rather low-grade at the momment.Like no support for the
protection attribute,which programmes like AMS players need or they
won't recognize the files.Of course the GIGANTIC block size of IBMDOS
makes using ATRs attractive.
(try writing 100 1-byte files to your hard disk and see how much space
it takes up to see what I mean)

For one thing,sampled sound doesn't work in emulators.And modern
(1990's) games will probably have problems as well.Of course for the
full experience you need a Atari with a PAL (non-american) ANTIC chip to
play all the games from places other than the US.And I assume,a Atari
with a NTSC ANTIC,as well,for US games.Maybe someone could supply more
information about using PAL ANTICs in a US Atari and vice versa.

Well they ALL play cartridge games!

Besides having a 64k Atari to play all games,there's really no Atari any
more powerful than any other when you're talking about comercial games.
(read "cartridge games")
I've never heard of a cartridge game using more than 64k of RAM.

>What is the most powerful Atari computer that will play 8-bit
>cartridge based games?

There isn't that much difference in power between the various 8-bit systems, but the most powerful, if you could find one, would be the 1450XLD, with its built-in parallel disk drive. Otherwise, the 130XE might be the most powerful, but I don't think any cartridge games use its extra 64k memory. On the other hand, the XE Game System was the only one with a game (Missile Command) built in.
Wait a minute. "Most powerful Atari computer" could be a Falcon or TT running an emulator...

Given that English is not his native language, this is plainly a ridiculour comment. Can you speak dutch as well as this guy speaks *you* language. No, thought not. Even if it was his natural language then you're still way off base, don't you ever find what you say isn't what you meant? It's not a LIE (I know you Americans love putting words like that in caps), but an error or a mistake. Slight difference.

Boy, you have a lot to learn. If Jury's get it right so much, how come so many appeals work? How come so many people get freed because it turns out the police fabricated the evidence? How come witnesses come back years later and say they lied? Ditto for victims? What about scientific evidence that later turns out to be wrong due to lack of understanding? What if the case is complex and the jury didn't understand it?

> you're just a dumb fuck who proved his stupidty to the entire world.
And you're just another yank that proves that the US thinks the whole world is like it (and right too). When you learn to walk without dragging your knuckles, come back to us.

When I state "I don't know about the US, but in country X ...", I merely say that I know how it's done in country X, so it might be the case that it's done the same in the US. All other people interpretted (sp?) it that way. Call me a liar if you want, I don't care. In fact, you're a liar yourself if you say (I quote): "To you, the world must revolve around the Netherlands." and "Well, it is in fact what you said." I have never said or even implied that. But I'll forgive you, you can't help it that your IQ isn't much higher than your shoesize.

Well, that depends. Really, any machine with at least 64K can run
pretty much all the commercial software; unless you have your own
application which can use more than 64K effectively, a simple, cheap
and readily available 800XL (usually around $20, give or take a few)
will be just fine...

I don't know of any cartridge game which uses more than 64K.

OK, why can't all of us, the Americans, British, and Dutch, get
together? I mean, why don't we join forces and gang up on, say,
Brazilians? Or the French? Surely these people are worthy of far more
ridicule than any our our respective groups.

So let's join in! The French smell badly due to lack of regular body
washings! The Brazilian's. . .uh. . .sugar cane output is sorely
lacking!

Hah! That'll show 'em!

p.s.: To any French or Brazilians who may have read this message, I'm
only joking. Brazil's sugar cane is some of the best in the world and
France's personal hygiene is above reproach.

The best Atari 800 emulator is Atari800 (dos or windows version) it is
available from http://cas3.zlin.vutbr.cz/~stehlik/a800.htm xlit is an old
emulator that was nice for its time, but there was never source code for it,
and the author seems to have abandoned it. It was only for Dos and very
buggy under windows 95. Atari800 is a GPL Program with source code
available, and it has almost full compatability with a real Atari. Also it
is under active development and new versions are released often.

Sampled sound does work in the Atari800 emulator. I suggest the person try using Atari800 it is available from http://cas3.zlin.vutbr.cz/~stehlik/a800.htm Atari800 is a Free program with source code available. It can emulate sampled sound in most programs and can run most newer programs and demos. New versions are often available. Xl-it seems to have been discontinued.

>There's no way to directly boot Windows 95.

My hard drive was pre-loaded with WIN95 when I got it. I have always assumed that WIN95 was installed from scratch i.e. not as an upgrade from MS-DOS, and that this was the reason that I have never been able to boot into MS-DOS by holding down F4 on boot up. Is this an incorrect assumption?

>Besides the BLASTER variable,there shouldn't be anything.Like most IBM
>stuff,everything accesses the sound card directly rather than using a
>handler.

Exactly what form does the BLASTER variable take, e.g. is it case sensitive, and what are the parameters? I think I have tried setting this, but maybe I am formatting it incorrectly.

>>I sure wish I had a 133mhz 80486.I didn't think that they got that
>fast.

PC has one of the last 486 motherboards made. Jetway/Jetboard J446A with SIS chipset. CPU is non-intel, an AMD 5x86/133 P75, supposedly equivalent in speed to P75, though probably not. Board is also PCI.

Maybe someone could email me with an exact copy of the "set blaster" command that they use to get their soundcard working under MS-DOS. I still wonder if maybe I have not got the format correct. Any comments gratefully received!

Hokay, things are winding down. I still have a lot left so I lowered prcies again. If you want to know what is left as of June 8, 1998 go check out...

http://home1.gte.net/mbates4/

Everything has been lowered. If you want it for lower make an offer!

If it is not on the web page I do NOT HAVE IT!

I will also consider trades for original or import PlayStation games.

Thanks

That is probably the first "old wives tale" I heard about the early game systems/computers. Yes, it is false and you *can* hook up those old computers with any TV/composite display and you will get no damage. That is what they were designed for.

What began this tale was when the original pong-like games hit the arcades, they were black&white (high contrast) and were left on for many hours. These games usually had non-moving white bars on the display (down the middle, across the sides), so after a few weeks or months, this white image would burn into the tube and resulted in what eventually fueled this about home computers.

The home computers were designed to prevent this in home TV's. They had built in "attract modes" so that if you left the computer on for more than a few minutes without activity, the colors on the screen would begin to change and prevent this burn-in. Besides that, its very unlikely that anyone would leave their computer on a single display for weeks anyway :-)

Even Combat on the Atari 2600 had anti-phosphor burn code.

I believe "DOS 6.22" can only be MS-DOS. "DOS" is a generic term that includes MS-DOS, PC-DOS, DR-DOS and FreeDOS (not to mention Atari DOS, Apple DOS, or IBM System/360 DOS.) Windows 95 includes its own disk operating system, which some refer to as DOS 7.

>be run directly to a VGA multisync monitor?

The first problem with that is that the signals do not exist at any point inside the Atari 8-bit in pure RGB form. Even the "RGB mod" for the A8 (which is actually intended for CGA monitors) cheats by stealing digital signals for only the luminance values (resulting in some weird color schemes if you use the hookup for game play).

>If I remember, the horizontal frequency of VGA is about double the Atari,
>so could a circuit be designed to double the output frequency of the Atari?
>Any thoughts, speculation, etc.?

Such a circuit has existed for some time now as an off-the-shelf solution. If you have a Best Buy store in your area, look in the PC video section for a device called "Instant TV". Unlike your typical TV card for a PC, this is a free-standing device, and requires no PC to be present. Plug it in to any monitor that accepts VGA input, and you can plug any composite or S-video source into the Instant TV, and display it on the VGA monitor. Oh, it also includes its own remote controlled TV tuner, for those times when you want entertainment of the non-interactive variety. <grin>

Cost is about $100-$130. There are other similar devices in the same price range on the market, including one that I have only seen at larger Computer City stores, and a unit sold by AVer Media.

The only DOS that comes with Win95 is some screwed up version of MS-DOS 7.
Win95 does not run on any installation except for it's internal DOS 7.

Win95 is effectivly MSDOS 7 with a 'win' statement hardcoded into the
autoexec.bat. DOS is most definitely there underneath it all.

Thanks to David Firth for the TCL Atari language, i've found so far that it is FAST, just like Action!.... If you are like me and enjoy programming the A8, you should get this new addition to the 8bit progamming languages arsenal, and the best of all It's free int David's Home page....THANK YOU DAVID FIRTH.

Javier.

Please guys let's talk Atari, so this is the subject of this newsgroup
no??? Also, let's show some respect for those guys who help A8 keep alive,
Bob Wooley, Ivo, Bill Kendrik, Bob Klas, and some others are the kind of
people we need, at least me, i don't have the time to do the things they do,
so when they're gone so great part of the support our A8 get in the net....
Sorry for the Sermon...

J.R.

You guys better stop printing these slanderous lies about me or I WILL SUE EVERY ONE OF YOUR ASSES! I have been forced to change my ISP five times in the last 2 years because of these damn stories. I am an HONEST businessman who has NEVER scammed ANYBODY nor have I EVER been imprisoned for ANY REASON! I DO NOT LIVE with my mother anymore! I have met a beautiful young woman and would like to get on with my life, but you people WON'T LET ME! If one more person posts another LIE about me, I will immediately take legal action! I MEAN IT, YOU DUMBASSES! LEAVE ME ALONE!

-T. Ortman

BTW...I have an Atari 800 for sale for $175.00
It originally sold for $799.00 and is in excellent condition, except for a missing letter "O" key. I will only accept cash. Absolutely no checks or money-orders will be accepted.
I will also throw in an original Pac-Man cartridge (Very Hard to Find) for an additional $17.00
Shipping for this item will be $35.00
First come, first served.

The F4 key is for booting a previous operating system, so you are
correct that it will not work with your Win95 only system. However, if
you use F8 and choose 'DOS Prompt Only' from the menu, you'll be in an
MS-DOS session. Or you can boot normally into Win95 and later choose
'Restart in MS-DOS Mode' from the shutdown menu.

Source record: 62186

Hi guys!

The problem with the ESS soundcard?

In fact, the ESS sound-card DOES need a driver to work properly from DOS-mode. I had a similar problem with a friend's computer, which we tried to make run in DOS; there are two files called ESSPNP.EXE and ESSCFG.EXE I think, for different versions of the card. I can't remember where I got them, but it was somewhere on the web. They're freeware driver downloads, so I can upload them to my website (see below) in a day or two, and I'll post where to get them :-) Hopefully that will sort things out properly.

Other than that, I'd normally run XLit from DOS, because Win95 does slow things down in general. However, that said, my PC is a bit old and slow (486 DX 40) to run an emulator at any decent speed, sadly... so not much emulator fun for me... :-(Have to stick with my 800XL I guess!

Also, I've started building a website of atari bits - at the moment, it's YET ANOTHER huge link page - sorry if that's a bit boring, but it's a start! I'll hopefully get time to add more useful - and original - things over the summer holiday.

The front-page (if you can stand some pretty vibrant colours!) is

www.doc.ic.ac.uk/~wrh1/ or for the 8-bit page directly, then:
www.doc.ic.ac.uk/~wrh1/a8b.html

It's also on Geocities, which might be quicker in the USA.

www.geocities.com/SiliconValley/Park/2340/

Source record: 62190

My cousin went on a run to the county dump and found perched on a pile of refuse, an 800, 810, 850 and 300 baud acoustic modem (830) all in fine shape with all cables and power supplies- along with a Basic cart and a Telelink 1 cart (I've never seen it- should be nifty). All were in the original if somewhat threadbare boxes and styrofoam. Now if I can just discover a decent monitor instead of the flea market special green screen beast I'm using now!

I do feel sorry for the benighted soul who threw this stuff away- I could understand tossing a PC or Vic 20 or something equally useless, but an Atari?? I'm shocked....

229. ATARI Equipment MUST SELL...

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-10 00:00:00 UTC
From: The Watcher <Use-Author-Address-Header@[127.1]>
Message-ID: <357fe641.8084685@207.126.102.10>
Source record: 62191

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
connector, original cost $599.00, Joysticks $19.95 each, asking $50.00
or best offer. These SELL AT Video 61 for $49.95 used.

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
manual, power supply, connecting cables, oil, original cost $399.95.
Also have a non-working 1027, can be fixed at any Atari service center,
both printers cost new $399.95 each, asking $100.00 for both of them.
Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00. These
sell at Video 61 for $74.95, same price.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for
$59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

Source record: 62192

Well, the Atari graphics characters do wild things with the HP
PCL, whereas on the Epson, most just print (harmless) italics.
For plain text, no problem, but otherwise can start spitting out
page after page with a few characters on it, etc. Atari word processor printer
codes would do the same thing, I think.
The alternative seemed to be to put in an AUTORUN.SYS
file to download the Epson set to the printer at bootup, although
I can't say that I recall seeing an Epson set file. Sound workable?
Thanks,
Larry

I've used my Atari with my Amiga monitor and my only complaint is that it doesn't "artifact" when a game needs it too. A lot of Apple translations, like Conan, use high resolution graphics (graphics 8 in Basic) which is officially a 2 color mode, but can be tricked into more colors by using artifacting. Each pixel takes up only half a color clock on a TV, but the Amiga monitor displays the true high res color. So in the case of Conan, instead of the weird "other world" colors of white, green, and purple, all the stuff is just white on the Amiga monitor.

A 128K cart (or 256K or more) can work with 64K XL/XE computers when they use bank selection. For that matter, they could work with a 16K Atari 400 if it can fit in the cartridge slot and the program allows it.

(I said the for sale was from Terry Ortman).
I retract that. I dunno who posted the threat to sue or
the for sale. Just because it seemed to be Ortman's
style, his StarFleet Software and address, doesn't mean
he might have posted it. It was posted (the for sale) thru
an anonymous mail2news server. The threat to sue was
likewise posted anonymously/bogus. Right now, I doubt
Terry O. has the sophisitcation to do the two types of
'untraceable' posts. Those posts can't sell anything, there
is no way to respond, except just mail the cash and a letter
to the address. Beans on the whole thing.
I've typed Ortman 50 times, 49.5 times too much.
There is a reference in the For Sale one to a location
in The Netherlands. But I haven't the sophisitcation to
say that isn't bogus. The whole thing is bogus.

The max colors is 256 colors...the graphic's chip only lets you assemble a
color using 8 bits...there are programs that display more than 256 colors
by flipping pages and turning pixels on & off to simulate more colors...but
they are all based on the limited 8 bit colors.

Larry,
Wouldn't it be better to build an HP JP (PCL5) printer driver for AWP or other Atari program? PCL5 code is a bit strange, but does work. We still use dBase III+ at work (we haven't had time to convert to Access or Oracle completely, yet) and had to adjust the basic stuff like Elite, Pica, Condensed and other variations. Pretty simple stuff, actually.
Graphics, and Atari font info nees to be converted or coded on the fly (or buffered and converted) to work under PCL5 to print properly.

All,
No, Not Bill. It was Jeff Potter and the program was Color View. He played with display list interrupts and page flipping and mapping 3- Graphics 9 images in Red, Green and Blue to fake the eye out to view 4096 colors max. on screen. CV is pretty good. I wrote a Basic XL program to print these images on a Star 2420 Rainbow dot matrix printer. Took a while to print a half page picture, (about 1.5 hours) but the results were pretty descent. Someday, I plan to update it (Color Dump 1.03) to Version 2.0 and be able to print to an HP Deskjet and maybe an HP Laserjet 5 Color laser printer. (Similar coding (DJ's use PCL4 and LJs use PCL5 and 6)). BTW, CD1.03 prints in 4 color from the 3 color data file. I generates a black/gray image file OR detects if one already exists in the currect directory. It was/is fully SpartaDOS compatible, too. I believe I posted it on the Umich archive as CDump103.ARC. The file includes the BXL program, an ATASCII listing, variable list, instructions and some sample files.
Anyway, since then, Color Squash View came out which merges the three individual .R, .G. and .B files into one and compresses it into a .RGB file. CSV, decompresses and displayes the image on the fly. Fast too!.

There is a program, I think it's called ColorView, or was it Apex,
Can't remember. But it used page flipping to 'create' the effect of
4096 colors, 3 separate pictures flashed quickly. With a little
flickering it produced good quality(for the 8bit)

When I used mine I bought the 8 1/2" wide thermal fax paper and cut it in half.
If you don't mind the rough edge it should work just fine (it did for me
anyway).

>Larry

I use a 1084. I didn't realize that it was an Amiga monitor; it was a gift from a friend who didn't want to take it back to Hong Kong when he graduated (thanks Kelvin!). I had been using it with composit signals coming from my VCR, to which the Atari's channel 3 signal was routed. Recently, I built a monitor cable for it, and it works great--way clearer than it was with the VCR decoding the signal. I'm still using the composite signal. I've been thinking of making a new cable that will do the split chroma/luma signals, but the current video is so clear that I'm not sure what the point would be.

I have a 400, and some of the keys aren't working. Specifically, the column that contains 2, W, S, X, and another that seems to contain the Clear, Up-arrow, and the slash/question keys.

Is this fixable? If so, how?

Hi,

Something have hapned to my US Doubler ROM circuit, if I change back to the original Atari 1050 ROM then it works, even if I have the FAT ICD inprinted circuit mounted on the MB.
I did try to read the ROM on a EPROM reader but it was blank.
Does anybody have the US Doubler on a BIN file so I could burn my self a new one?

Regards!

Freddie

A little flickering? Maybe on on an NTSC system, but on PAL it looked
horrible. Only if you turned down the contrast and luminance a lot and
turned off the lights it looked somewhat ok.

My cable is now working fine. I ended up removing everything from the PC board and starting fresh. I had been using several different schematics to wire the cable, but I restarted it using the schematic found in the APE web page. The cable works like a charm, so now all I am doing is exploring APE. I'll have to register APE soon, though, because I love it. It has brought new life to my Ataris!

Check to see if the 1489 chip gets hot . If it does most likely you put the SIO end wrong this is the most common mistake.

Remenber the pinn out is as if you were looking athe the computer not the cable.

Hello Atari Enthusiast,

Shipping is not included in these prices, once we have a deal I will go to the Post Office and let you know how much to ship.

Atari 600xl - $15.00
(modified, self installed, new ram chip that brings the machine up to a 64k ram, same as a 800xl I think, keyboard sticks a little but I feel that all the keys can be restored.)

XDM 121 Printer - $10.00
(still works great, letter quality printer, looks like your stuff went through a typewriter, old printer cartridge ribbon but printer works great)

Standard tape drive - $5.00
(Hey what can I say? If you have used em most likely you have cussed at them! This one works fine but has been cussed at.)

All equipment will come with everything needed to make it work and hook up to your Atari or mine. Please respond via email as well as to this list. Thanks for keeping the Atari alive.

It sounds as if you are using a chroma/luma hookup. The lack of
artifacting is a feature of the separated chroma/luma hookup, and is
not unique to the Amiga monitor (i.e., you would get the same effect
using a chroma/luma hookup on a 1702).

It looked horrible on NTSC too...flipping two pages causes noticeable
flicker...which is ok for games & graphics programs, but unusable for
anything serious...flipping 3 pages will drive you nuts.

Source record: 62256

I thought about this a while back, but it kind of slipped my mind...

Where was the 1025 dot-matrix printer sold? - it was advertised in the UK press as part of the 600XL range, but I don't ever recall it being sold here. What *was* sold was the 1029, which wasn't available in America apparently- because of this, and the fact it had a nonstandard 7 pins, only custom software supported it. They must have been fairly different printers, but why did Atari do this?

BTW, I thought the 1025 looked like an 800 series peripheral rebadged to go with the XL series- all those curves...

Join the club- the PAL Atari users club that is. NTSC artifacting doesn't do
much on PAL
Ataris, it just looks like a load of stupid stripes. I wish American
programmers had taken this
into account when they wrote their games- we've had this stuff for *years*!
BTW, you *can* artifact with PAL, but the shading schemes are totally
different, and you have to adjust it first...

Ivo,
Heh... Jeff designed it around the NTSC system, being from Florida, USA. There is flicker, but the results are actually rather impressive for an 8-bit machine. When CV came out, PCs were only doing 16 colors (256 if you could get a really good video card). The Amiga was the only one that could actually do real 4096 colors, at that time.

Yes, I'm still checking this newsgroup.

COLORVIEW did manage to simulate 4096 colors by alternating 3 screens, but tried to limit the flashing to alternate lines. It could also do 64 or 8 colors with more horizontal resolution.

299. Miner 2049er Q U E S T I O N . . .

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-12 00:00:00 UTC
From: swozniak@aol.com
Message-ID: <1998061202021200.WAA02674@ladder03.news.aol.com>
Source record: 62261

I want to know which version of Miner 2049er came first. The Atari 400/800 or the 2600 version. I believe the 400/800 version came first because that's how I remember it and it doesn't seem logical to me that the watered-down 2600 version would be the basis for the brilliant 400/800 version. The reason I'm asking is because the editor at www.ultragp.com claims Miner 2049er for the 2600 was the first platform game. (His name is Jaz, and the website is for the now defunct Ultra Game Players magazine.) I wrote in because I thought that the first platform game was Hard Hat Mack by Electronic Arts. Even if I'm wrong, I don't believe the 2600 version of Miner 2049er came before the 400/800 version. So who's right? Which game came first? Miner 2049er or Hard Hat Mack? If it was Miner 2049er, which version came first...the 2600 or the 400/800?

-Scott Wozniak

Miner 2049er first appeared for Atari 400/800...I remember because the atari magazines like ANALOG and ANTIC made a big deal about it. The programmer (I forget his name) was an Apple programmer and when they were going to introduce the Atari game, everyone was expecting some cheezy watered down game that looked more like an Apple game than something that took advantage of the Atari computers. Anyway, they were surprised and the rest is history.

Well, obviously it isn't the same! It's 6502 ASM. You'll also need to know
a lot about the 8bit's architecture to do anything in ASM for it.

The 6502 and Asm/Ed cart is a great way to learn the basic concepts.
Frankly I suspect it might be more instructive to learn on "little"
processors before getting fancy.

(Somebody wants to use Assembler Editor)
Right. http://www.en.com/users/russg
Goto INFO directory and download ASMED.TXT.
That might help some. But then, somebody mentions, you need
the 'Mapping the Atari' probably. There is other web
sources for the OS locations and how to do assembler.
I mostly use ASMED for little stuff to put into
BASIC or ACTION! proggys.
Like I say, there are other places (web sites) with
probably better sources of info.
I can think of Ben Smith for the 'Mapping the Atari'
, I think he has it.
Good Luck and drop me a note. My site. I don't know
if it is working, actually. I have no hit counter
or other means of knowing if it is working other
than looking at it myself, so drop me a line if
you go there and get a chance.

I think you are all wrong.

Bill Hogue of Big Five Software designed and wrote the Atari 400/800 version. He was a TRS-80 Model 1 programmer before he moved to the Atari.

The Apple II version of Miner 2049'er came out first only because of a last minute bug found in the Atari version.

I'm not sure of the Atari 2600 version but I know it did come out early in the piece. I'm not sure if it came out before or after the Atari 400/800 version.

Anyone know where I can find the TI/994A and IBM PC version of this classic game?

Nick

Are you thinking of Frank Cohen? - he did a number of Atari games including
"Beer Belly Bert's Brew Biz".

Miner 2049'er and Bounty Bob Strikes Back were both done by Bill Hogue
AFAIK,
and Miner was announced first for the 400/800. The magazine ads at the time
promoted it as "an original Atari game - NOT an Apple conversion".

Later it was ported to a number of systems, including the TI-99/4A and
VIC-20.

I believe it also inspired the Sinclair Spectrum game "Manic Miner", the
sequel to which was "Jet Set Willy", which was later ported back to the
Atari!.

Graham.

That pretty much explains why Ultra Game Players is now defunct. The first
platform game ever was an arcade game called Space Panic (ported to home
computers as Apple Panic).

The other messages expired but I have another question. How do I know when the computer is done with the data frame? The tech. manual says something about fixed length but I'm just not sure.

Thanks,

Patrick Robbins

321. Atari 130XE For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-12 00:00:00 UTC
From: DAMIR <DAMIR@prodigy.net>
Message-ID: <3581DAE0.58C2@prodigy.net>
Source record: 62283

Due to lack of space I am selling my Atari 130XE system.

This is very clean system in excellent condition.
It includes following:

-Atari 130XE with power supply, TV switch cable, manuals (all in
original box)
-Video cable
-2x Atari 1050 floppy drive with power supply, cable, and manual
-Atari XDM121 matrix printer
-Spare (working) motherboard with shielding for Atari 130XE
-Joystick
-Books (Atari Basic Tutorial and Advanced Atari Basic Tutorial)
-Software (30 floppy disks)

This system is in perfect working condition. It also looks great with no
scratches or other marks. The original box is also in perfect condition,
so this system is ideal as a collector's item. For the whole system I am
asking $65 US. Shipping is not included in the above price. C.O.D. is
available.

Don't know about that. Correct me if I'm wrong but there was a whole bunch
of *very* early Vic-20 platform games: Wacky Waiters for example (Imagine
UK?) Space Panic does seem to be the first but surely such a bad (and
difficult) game can't be allowed to claim *that* mantle?

Gareth.

323. XF551 with two drives?

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-13 00:00:00 UTC
From: fripe@my-dejanews.com
Message-ID: <6lshheaef1@nnrp1.dejanews.com>
Source record: 62086

Hi,

I have read a lot about the 3 1/2" upgrade for the XF551..
Thanks to Bob Woolley for sharing it with us!!

I have had a little look inside the XF551 and thinking of the
possibility to use it with two drives.
As far as I can se it only uses DISK ID0 pin 10,
And not ID1 pin 12 ID2 pin 14 and ID3 pin 6.

But is it a possibility anyway to conect another drive to the XF551
controller? With a slite wiring modification?

Can the software written for the XF551 handle it?

Regards!

Freddie

Wanted: Mar Tesoro

I've been looking for this game for nearly 10 years now without
luck. I'll take a copy or anything. I just would like to see it
again, as it used to be one of my favorites. An ATR image would be
fine as well.
In case the name doesn't ring a bell, this was a treasure diving
game. You had to rent diving equipment and a boat then sail out and
dive to find riches. I'm pretty sure it was written in BASIC. I've
been told it was advertised in the first issue of Antic (maybe on one
of the covers).
Please contact me if you can help in any way. Thanks.

Message-ID: <01bd968f$bf964cf0$64646464@gregm_pc>
Source record: 62088

The answer depends upon which device you are talking to- more precisely the device handler you send data thru imposes both timing constraints and data frame size. The frames are fixed length for each device because there is no provision in the protocol to transmit the data frame length. That doesn't mean all data frames are the same size- just that each device has a specific size.

The operating system manual (CO16555) indicates the maximum delay between the receipt and ack of a command and its response (data or complete) is 255 seconds. The actual timeout is set by the device handler when it submits the command/data frame to SIO. Unfortunately the manual doesn't indicate what the timeouts are for any of the devices.

When the Atari sends a command, your device responds first with ack- indicating a valid command. It then can consume up to 255 seconds- or the timeout set by the driver, whichever is least. Once the command is "done", the device transmits complete and then the data frame back to the Atari.

When the Atari sends a command with data frame, the command is ack'ed as above, then the data frame is received. Once received, it is ack'ed as well. Then your device can process for the 255 sec/driver timeout interval- and then transmit complete.

The Atari appears touchy with respect to timing between transmissions and receipts. The OS manual above indicates some values, but my experience doesn't match (could be bugs in my code- its hard to say yet). You might consider starting with a 1 or 2 ms delay between transmissions/receipts. The SIO UART only has a 1 character receive buffer, so its pretty easy to overwhelm it.

Regards,

Gregm

Source record: 62090

I've dug out my old disks and transfered them using my ST and the QTU (Quick Transfer Utility) that comes with the XFormer emulator. The QTU program only seems to go upto 96K (or 720 sector disks). Does anyone have a program that goes higher? Or are there any better PC programs that can use the Xformer Cable to read a 1050 drive?

Anyway, now uploaded to ftp.hackerz.com are:

8-BIT ATARI SELECTION DISKS

sel01a - Draconus, Rainbow Walker
sel01b - Universal Hero, Ninja Master
sel06a - Spellbound, Ninja Mission
sel06b - Grand Prix Simulator, The Last V8

These were simply straight tape to disk conversions with no compression, basically just my favourite games done so that I didn't have to wait so long for them to load. Most of these were multi-stage loaders and hence the need to write my own loader. The only exception was disk3 which uses a MultiBoot XL menu which was great for one part exes.

I have a few more images that I can upload but as these games are probably already available this may not be worthwhile (for most these I need the better transfer program):

sel02a - Leaderboard, International Karate
sel02b - Space Hawk, Mousetrap, Zybex
sel03b - Tron, Swat, Hover Bover, Despatch Rider, Alien Swarm, Jawbreaker
sel08a - Feud, Colony, Milk Race
sel10a - (Silicon Dreams) Snowball, Return To Eden, Worm In Paradise
sel10b - Jet Set Willy, Who Dares Wins II, Dizzy Dice
sel12 - Mountain Bike Sim, Cosmic Pirate

(Leaderboard also still requires the joystick key to play and so requires a little hacking to remove the check :-)

The missing disk numbers correspond to disks that now seem to have bad sectors:

sel03a - Colossal Adventure, Forbidden Forest, Eastern Front, Caverns of Khafka, Kid Grid, Galactic Chase
sel04a - Pro Golf (Sunningdale + Pebble Beach), Star Wars (Domark)
sel04b - Ghostbusters, Footballer of the Year
sel05 - was actually just Turbo Basic + some work
sel07a - 180 (Darts), Arkanoid, Fruity Gambler
sel07b - Universal Hero (again?!)
sel08b - Joe Blade, Action Biker, Rescue On Fractalus

sel09a - World Soccer, Fruit Machine Simulator, Dropzone
sel09b - Beer Belly Burt's Brew Biz, Red Max, Thrust
sel11 - Spiky Harold, Microrhythm, Druid

Have fun,

Mark.

I have that setup. I had CSS do a "dual drive" upgrade to my 551 years ago.
Two warnings however, one: I don't think they ever worked the "high speed"
data xfer problem out, so you are likely to loose that as well as many sector
editors will no longer work (not sure why).
Second: This setup gets VERY hot. I had to remove the cover from my 551 just
to maintain proper operation.

For more info, contact me in e-mail at: whatshisname@NO_SPAM.iname.com

HELP ME PLEASE!

So does anybody still have the color inserts that were in the bags of the old Adventure International games? Good scans would be fine for what I need, but snail-mail of color copies would be better. (I would send you an SASE + the cost of color copies)

I am working on a new front end for the scot adams adventures and thought having the original art would rock. It was really crude, but had real style and really adds to the retro feeling these games now hold.

I have contacted Scott and he does not have any of them any more...oh well...

Any help would be REALLY REALLY REALLY REALLY REALLY REALLY appriciated.

Thanks,

Russ Herschler

I know where you can get a copy of this game!
Dean Garraghty Software (http://www.dgs.clara.net) has public domain disks and
I know this title is on one of them; if I remember correctly, this game was
made by Syncro in 81 or so.
Good luck,
Bertrand.

WARNING: long message but VERY VERY LOW PRICES!

Hello again everybody.

I still have quite a bit left here and would like to move it out before the summer is over so I have lowered prices again.

I am also looking for trades this time around and they will have precedence over sales.

If you would rather not trudge through this message (because it is VERY long) you can go to my web site.

http://home1.gte.net/mbates4/

Thanks and feel free to make offers.

C'Mon, the apples pulled themselves out of the holes with their leaves!
Definite realism there!! Truely was a bad game, but it was a port from
an apple game wasn't it?

tony

Possibly. Did he play a part in Bounty Bob Strikes Back? I definitely saw a
"Cohen" in the credits somewhere.

>
>I believe it also inspired the Sinclair Spectrum game "Manic Miner", the
>sequel to which was "Jet Set Willy", which was later ported back to the
>Atari!.

The Atari version of that game was not good! ;-(Certainly compared to the
Spectrum version it was diabolical - the Spectrum had this incredible
ability to produce what seemed like bit-mapped graphics. Willy moved with an
icredible smoothness (for the time) and the collision detection was right
on. The Atari version by contrast was un-colourful and blocky/jerky. Better
had it never been done - the thought of what could have been would have been
better than the memory of what is. Boy, I must have had too much too drink!

Gareth.

336. WTB: ATARI Assembler Cart

WTB: ATARI Assembler Cartridge for 800XL / 130XE. Very flexible on price;
Documentation prefered. E-mail AlexDover@aol.com with your price.

337. Faster than Ultra Speed?

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-14 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <1998061401435000.VAA08174@ladder01.news.aol.com>
Source record: 62099

In the FAQ listing of disk drives, I've seen several Eurpoean Drives listed as transferiing at 67 - 70K (BPS) versus 50-52K for Ultra/Warp speed on US systems. Anyone know what gives here? I thought PAL systems actually ran at a slower clock speed, and I can't see how the slight extra VB time would allow this. (?) Also, does anyone use "Bibo Dos" on US systems? (I read that it has 70K support built in.)

339. Dos 2.5 on a Cartridge?

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-14 00:00:00 UTC
From: lwhite6497@aol.com
Message-ID: <1998061411385000.HAA17135@ladder01.news.aol.com>
Source record: 62101

In one of the last Atari 8-bit ZMagazines published (around 205, I think), there
was a note that someone had successfully put Dos 2.5 on a cart, complete
with double density support. The cart could be switched out when not used.

Anyone ever see anything more about this? How about switching the cart out?
I have MyDos 4.5 on a cart. It would be nice to switch it out, after it loads. The
instructions say to pull the cart, but I still don't like inserting/removing carts with
the power on.

RE>I have a cart for the Atari 400/800 called Assembler editor. What
RE>version of Assembly is this and where can I find something on how to
RE>program in it? I'm learning Sparc Assembly but its just not the same.

Different processor means a different instruction set to deal with, so
natuarlly it's not going to be the same. Also ASM/ED doesn't have macros
or conditional assembly to simplify the process.

On top of all that, you'll need to learn how to work with the features of
the Atari OS, so it's definately going to be a different experience compared
with Sparc system.

What will be similar will be many of the concepts that one must learn to
write assembly language. When I started learning 68000 asm on an Atari ST,
and Intel x86 on a PC, I found I'm learning them quicker because of the time
I spent working with 6502 assembly.

There is a text file around about how to use the ASM/ED cartridge. You
should be able to find it on a BBS or Internet file archive.

Later...

Cross-posted to: alt.atari.2600,alt.atari,alt.atari.2600.vcs,rec.games.video.atari,comp.sys.atari.8bit,rec.games.video.classic,rec.games.video.marketplace,rec.games.video.misc

There is a flea market on Michigan Avenue, just east of downtown Ypsilanti. On many occasion I see various video game stuff like Fairchild Channel F games, Intellivision III, or even 2 dozens Pac Mans for Atari 5200.

I can point to a few other places but they all are in the thumb area. Oh yeah there is a fair in Midland 3 times a year that sells all sorts of antiques and collectibles. It's where I dug up a working Vectrex and 2 games, all in box for $20. That fair is HUGE, taking me all day just to cover all the dealers.

On Birch Run road (off I-75 north of Flint), take a right. Go to the next traffic lights and take a left. Go up past to the 3rd road on the left and turn there. If you went the right way, you will see a sign that says barn sale. It's open almost year round and it's where I found a working Atari 5200 system for a fin.

Around summer time, near Baldwin (about 1 hour north of Grand Rapids) there is a large sales in 3 trailers (just off US-10 about 10 min east of Baldwin) and around Baldwin there is a lot of sales and such dealers. I once passed by a working Odyssey 100 system, though I didn't get it because of the ridiculously high price and a dealer with a one way mind.

Sometimes you have to travel a lot to find good places. I suspect there is a lot of good places in Detroit but I avoid that place. I don't want to find my car sitting on blocks.

351. Re: XF551 SIO-Level Commands

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-15 00:00:00 UTC
From: Jeff Potter <jdpotter@worldnet.att.net>
Message-ID: <6m4h8m$j3s@bgtnsc02.worldnet.att.net>
Source record: 61987

Frank-Oliver Malisch wrote:

> is there a document available containing all the
> SIO-level commands an XF551 drive understands
> (including parameter options) or does one have
> to reengineer that from the drive operating
> under sparta dos ???

Here's something I found (posted by Matthias Belitz, Feb 1, 1997):

$52 R Read sector
$50 P Write sector
$57 W Write sector with verify
$53 S get controller status, returns 4 bytes
byte 0 drive status
bit 0 - Command frame error
bit 1 - Checksum error
bit 2 - Operation error
bit 3 - Write protect
bit 4 - Motor on
bit 5 - double density
bit 6 - unused
bit 7 - Dual (medium) density
byte 1 controller status, returnd values are inverted
bit 0 - busy
bit 1 - drq
bit 2 - lost data
bit 3 - crc error
bit 4 - record not found
bit 5 - record type
bit 6 - write protect
bit 7 - not ready
byte 2 time-out (format); $e0
byte 3 unused; always 0
$21 ! format disk (single for 810 and stock 1050)
as defined by CMD $4f for upgraded 1050 and XF 551
(heard, that they will give back 128/256 bytes?)
$22 " format enhanced (medium, dual) density (1050)

This was the standard command set of 1050 (810) drives

$4e N read drive configuration; returns 12 bytes
byte 0 number of tracks [1 for harddisks)
byte 1 step rate
byte 2 sectors/track high (total number for harddisks)
byte 3 sectors/track low

byte 4 number of heads decreased by one
byte 5 format (0=FM; 4=MFM)
byte 6 bytes/sector high
byte 7 bytes/sector low
byte 8 drive activated
bytes 9-11 unused
$4f O write drive configuration; see above
$3f ? get high-speed-index
Happy, US-Doubler, HDI (Germany) return $0a
Speedy (Germany) returns $09
These are supported by all double density drives.

Special Speedy (Germany) commands:
$20 format automatically, acts like $21, but computer has not to wait till drive is ready
$51 stop write command, writes all data from internal buffer to disk, stop motor then
$44 configure drive/track display
$4b configure slow/fast
$4c direct jump command for internal processor of 1050
jumps to location stored in DAUX,$30a
$4d jump, as above, but drive sends a "COMPLETE" before jumping
$41 add/remove command to/from internal command table
$68 get length of internal high-speed-SIO-subroutine
$69 send high-speed-SIO-routine to computer
$60 write track, writes complete track
$62 read track

US-Doubler:
$66 format disk with special sector-skew

(no guarantees)

Jeff Potter

If I use sio2pc (version 3.19i), and create a standard double density image it creates a
file that is 184,336 bytes which is 16 + 720 *256 implying it uses 256 bytes for all sectors on a double density disk. In my notes I have down that XL-IT and Atari 800Win
(and maybe Atari800 Dos) use this format - don't recall version I checked on Atari800Win.

Ape (ver 1.12) will create an image of 183,952 bytes which is 16 + 3*128 + 717*256 implying it will store 128 bytes for the first 3 sectors and 256 for the remaining sectors.
In my notes I have down that XFormer, APE, and Image Magic (Imagic) use this format.

This makes writing ATR disk image utilities fun.

Since SIO2PC came first and created the ATR format, I assumed it to be the standard
when I wrote Diskformer several years ago. In my current Windows 95 image utility
I look at the (filesize-16) to see if is evenly divisible by 128, if it is I assume 128 bytes
for the first three sectors, otherwise I assume 256 bytes. When saving, the format
can be be chosen. I believe all XFD images use 256 bytes for the first three sectors
on double density disks although somehow I did find an image on my hard drive that
had 128 bytes for the first three sectors.

I had it on take nearly 15 years ago. First it loaded in a couple minutes. After awhile, those minutes turned into 2 hours. Then it stopped working all together.

Is there a Rom image available for this? If so, could someone point me in the right direction?

eternal thanks,

Dllem

I just started using the Atari800 Dos & Win Emulators, and am having
troubles copying files from a H: device to an ATR image. I'm using
Atari DOS 2.5, and every time I use the [C]opy command, it gives me an
ERROR 165 or 170!

I've read the new users FAQ, but am still having trouble
Can anyone help?

I've got a Turbo 1050 upgrade which is listed with 70K. AFAIK the Speedy
upgrade goes up to 96K, but only with a custom disk copy program. The regular
high speed transfer is also 70K for the "Speedy".

> systems actually ran at a slower clock speed, and I can't see how the
> slight extra VB time would allow this. (?) Also, does anyone use "Bibo
> Dos" on US systems? (I read that it has 70K support built in.) Larry

I also don't see a reason why US systems couldn't go up to and beyond 70K.
Probably it's just the design of Ultra/Warp speed upgrades available in the
US. On the other hand I vaguely remember that one of the Happy upgrades would
actually transfer data with about 70K or more? I could be wrong, though.

As to DOS. I use MyDOS with my Turbo 1050 upgrade also for high speed
transfers. It's good enough for me.

Format a disk and put DOS and DUP.sys on it. Now boot from the disk
and forget the cart. If it worked like SDX that would be another
thing.

What about it? And which game? Kareteka and that ilk used the same
protection, I wrote a cracker program for it way back when. But of
course, they changed their protection scheme several times.
Synapse really had the best protection; after Broderbund bought them
I'm sure they integrated at least that part into them. Some of the
synapse games actually used the vlbank to check to see if you had
turned your omnimon on. You had to flip the switch and hit select and
reset all within the same cpu cycle.

> Joe
David,

Joe's answer is the only correct interpretation of the DOS under Win95 that I have seen here. The F8 key with the DOS menu option will boot you straight into DOS 7.0, although it's not a DOS "session." It is, in fact, intercepting the BootGUI option from the startup process and halting the Win95 startup, so you are, in fact, in DOS. If you type "win" at the command prompt, you will start Win95, just as you would start Win3.x with DOS 6.2x.

However, even doing so you'll still need the real-mode 16-bit drivers for the soundcard. The only sensible place to try to find them is from the manufacturers website. Chances are, if they've got a site, they'll have the DOS drivers you're looking for. If not, then go looking through one of those other sites that have been mentioned here. In order to install them with the least amount of anguish and pain, you'll want to boot to DOS 7.0 with the F8 key, then install the DOS driver disk, making sure that you do NOT install any Windows drivers (if it asks about Windows, tell it you don't have it). While that sounds like a scary solution, it's the only one I've found that won't corrupt the registry settings for the Win95 installation of the sound card.

There is another option to try. You can manually enter the BLASTER settings in AUTOEXEC.BAT. Here's a sample setting:

SET BLASTER=A220 I5 D1 H5 P330 E620 T6

Where A220 is the BASE Input/Output Range of the soundcard,
I5 is the IRQ, and D1 is the DMA number. In most non-SoundBlaster cards, that's all you'll need (as you can see, my settings include the 330 address and settings for the digital audio portion of my card, which you shouldn't need).

On my Toshiba laptop with an ESS soundcard, my settings are A220, I10 and D1, but yours may not match, so you may want to play with the settings. If you boot Win95, then open the System applet from the Control Panel, then click on the Device Manager tab, you can find the sound card entry under "Sound, video and game controllers." Click on your card's name, then click the Properties button and you can get the settings info for your card under the Resources tab that appears. In most cases, these will be the same settings you'll use in the BLASTER variable.

I still say the best answer is to get the driver disk from the manufacturer, or at least give their tech support center a call to get the settings from them.

Of course, like The Doctor has said, nothing beats a real Atari...

I think I've seen your message here b4, but here's the answer again in 2 words:

You can't.

At least, not yet. The touch tablet uses dual paddle coordinates to relate it's position (i.e. PADDLE(0) for x-coordinates, PADDLE(1) for y-coordinates -- but I'm probably wrong about the order). Until someone can design a device to convert paddle responses into analog pc joystick values, you're probably out of luck.

<Hint, Hint> I'd like to see this happen, too, but I'm not a good hardware designer nor device driver programmer. <Hint, Hint>

There are some cases where hooking up a game system to a _projection_ TV can
cause problems (the load levels on older proj-tv's were a little unforgiving),
but everyone else is right, the A8 output should be fine on a 27" Sony.

Hogue's "Miner" was ported to probably more systems than any other game in its day. There was a LOT of hype about it's availability on multiple platforms, and Bill was interviewed in either Analog or Electronic Games about it. I'm working on a site that will include the scanned ads for "Miner" (as well as many others -- I already have permission from Scott Adams of Adventure International to show his SAGA ads, and I'm working out the details for the others), and I may be able to reprint the interview.

Bill was not involved in every translation, however, which may be why Cohen's name rings a bell. It's possible that he was involved in a translation, but Bill is definitely the original programmer (quite young at the time, too; I

think he was still in his teens).

I've found quite a few ads that show all the platforms it was ported to. I'll try to make sure I show as many as possible on my site. Stay tuned, and when it's finished I'll let everybody know the address..

How about games like AE and David's Midnight Magic from Broderbund?
If I remeber right I think that the Actually games started on sector 90.
All before that was to load the loading graphics and copy protection.

Btw, used to have Omnimon, do you know if I can buy one somwhere or maybe
there is a ROM file on the loose? There was this litle circuit board on a
switch if I am not wrong..

Source record: 62127

```
Hi,

I just came across the following problem:

I remember somebody claiming here that in double-density
atr-images the first three (or two) sectors are only 128 bytes
instead of the usual 256 (for dd-images). Is this correct ??
Is there a definition of the atr-standard ???
The reason I am asking this is because when I transfer complete
dd-disks from the a8, the "diskformer" program (v0.96) transfers
an image in which all sectors have a length of 256 bytes.
This is true for both dd-atr-images and dd-xfd-images.
Is this a bug in the diskformer program ????
What about dd-xfd-images ? Should their first sector
also contain only 128 bytes ???

Thanks in advance

Frank-Oliver

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
connector, original cost $599.00, Joysticks $19.95 each, asking $50.00
or best offer. These SELL AT Video 61 for $49.95 used.

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
manual, power supply, connecting cables, oil, original cost $399.95.
Also have a non-working 1027, can be fixed at any Atari service center,
both printers cost new $399.95 each, asking $100.00 for both of them.
Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00. These
sell at Video 61 for $74.95, same price.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for
$59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

As Per US Code, Title 47, Chapter 5, Subchapter II 227
Unsolicited commercial advertising is NOT Welcome here

374. Re: Size of DD-ATRs

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-15 00:00:00 UTC
From: crow@coos.dartmouth.edu
Message-ID: <6m3vgk$8ao$1@dartvax.dartmouth.edu>
Source record: 62132

Frank-Oliver Malisch writes:

>I remember somebody claiming here that in double-density
>atr-images the first three (or two) sectors are only 128 bytes
>instead of the usual 256 (for dd-images). Is this correct ??

Yup, that's right.

>Is there a definition of the atr-standard ???

Check the SIO2PC docs. The ATR format was created by Nick Kennedy for
use with SIO2PC. He defined it for both single and double density
images with arbitrary numbers of sectors.

>The reason I am asking this is because when I transfer complete
>dd-disks from the a8, the "diskformer" program (v0.96) transfers
>an image in which all sectors have a length of 256 bytes.
>This is true for both dd-atr-images and dd-xfd-images.
>Is this a bug in the diskformer program ????

Yup, that's a bug.

For DD ATR images, the size of the file should be

ATR_HEAD_SIZE + 3*128 + (sec_count-3)*256

where ATR_HEAD_SIZE is, as I recall, 16 bytes.

Personally, I think that was a bad idea, just like storing the size of
the image as a count of 16-byte "paragraphs," instead of as a sector
count, but that's how it works, and we're stuck with it now. Since it
does do the job, I don't see any point in introducing yet another disk
format.

BTW, is the APE PRO format (the one with the copy protection info)
proprietary, or are there docs for that somewhere?

Message-ID: <6m479d$7o@dfw-ixnews3.ix.netcom.com>
Source record: 62133

DEUCE 98
The Atari Users of North Texas (AUNT) Computer Exposition will be coming again to
Dallas this November in conjunction with the monthly DFW XChange Super Saturday
activities at the beautiful Dallas Infomart. Show date is planned for Saturday the
14th. As with the last three DEUCE shows, the actual show date will be finalized
120 days prior to the exposition. The exposition, along with the Super Saturday
activities, charge no admission fees and are open to the general public. The one day
exposition is planned to begin at 8:30 AM and run until 4:00 PM. A Friday evening
pre-show get together and a post show get together are also being planned.
November is still a great time to visit the Dallas Metroplex. The DFW XChange Super
Saturday activities are a monthly computer extravaganza where thousands of computer
enthusiasts get together, share their computer interests and enjoy some of the best
computer and high-tech electronic buys in Texas. This November will again be special
for us Atarians because so many of our finest developers and dealers will be partici-
pating in the activities.

The Dallas Infomart facility, a replica of the famous 1895 World Fair Crystal Palace,
is located in the heart of the Dallas commerce district at 1950 Stemmons Freeway
(Interstate 35E). The facility is leased by the DFW XChange each month to provide
a community service to all computer users in the Dallas-Ft Worth Metroplex area. The
Atari Users of North Texas is one of many participating user groups that help support
this community service by sharing our Atari computer interests, general computer
expertise and providing user assistance to our local Atarians and the interested
general public.

Vendors are being lined up. Systems for Tomorrow, chroMagic, Crawly Crypt Corp and Emmulators have already expressed their interest in participating in the show. Vendors interested in participating can contact David Acklam at (972) 242-9655 or via email at d.acklam@genie.com. You can also visit the AUNT internet home page at http://www.startext.net/homes/aunt.

376. SIO Command List

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-15 00:00:00 UTC
From: dmlloyd@earth.execpc.com
Message-ID: <6m493i$ml1@newsops.execpc.com>
Source record: 62134

Hello. I'm interested in compiling a complete (or as much as possible) list of SIO commands for the various disk drives, printers, modems, etc. that are (were) available for the Atari. Can anyone point me in the right direction? I think that such a list would be quite benificial to the programmers and experimenters out there (like me! :).

I would also like to include the commands for the various drive-ROM modifications as well.

Thanks in advance!

From: Ken Siders <ksiders@columbus.spam.rr.com>
Message-ID: <6m7gqrjkl1@news-2.news.gte.net>
Source record: 61990

>Actually, the documentation for SIO2PC states that all Atari disk have
>128 bytes in their first three sectors. This is true for real disks,
>and thus it should be for emulated images too. The boot code in the
>XL/XE and 400/800 simply assumes the boot sectors to be 128 bytes.
>When dos is booted, it figures out that the other sectors are 256 or
>whatever. Point is that the boot code expects the boot sectors to be
>128 bytes. (probably also the reason why DOS writes three boot
>sectors even though DOS 2.0 boot code is only two sectors big). All
>ATR images have 128 bytes in their first three sectors, regardless of
>type and size. This is all explicitly stated in the SIO2PC
>documentation. Read it carefully, and all the way through.
>It also states that the 183,952 size is STANDARD, not the 184,336
>size.

Thanks for the info. I'll be updating my current utilities and
documentation.
I had just blindly created a 184K image from the first list of sizes
presented with SIO2PC and checked its size. So I guess this creates an
image with 721 1/2 sectors since there is an extra 384 bytes. At the time,
I didn't have SIO2PC actually hooked to an Atari to write to the image and
look at it. About 1/2 of the DD images I have have are one size
and the 1/2 are the other. Some look fine on XL-It but not on PC Xformer
and the opposite was true for the others. For the person who originally
asked,
Diskformer will not be updated until I find the original source disk
wherever
it is.

> It notes that a tilde is displayed for standard disk sizes.
>To create a disk size of 183,952 you have to choose option 6/More, and
>then select option 3 from the "Choose standard sizes from list"
>screen. This gets you a standard disk size. I really have no clue why
>the 180 kilobytes image of 184,336 bytes is there, because in fact
>in my opinion, this is an invalid ATR image size. Well, that is, it
>has 128 unused bytes at the end. Write data to it the disk image, and
>you will see that the first three sectors really only contain 128
>bytes.

Where is this documentation available? The last version I had does not
have this information in the docs. I would be interested to see it to see
if
I have everything else correct. Was there a version after 3.19i?

>I know that the Diskcomm program stores DD disks with a sector size of
>256 in the DCM file, even for the first three sectors. The last 128

>bytes contain zeroes. In reading and writing it has to read and write
>128 bytes of course, otherwise the drive will refuse the command.

Jay,
There are a couple of them. Deep Blue C is a commercial one available
at www.myatari.com, then there are a couple of shareware ones that you
can probably d/l from the Umich archive at
ftp://atari.archive.umich.edu/atari/8bit/.

You could still be right, since the GLOCGP only lists primary programmers and/or porters. If Cohen was a minor collaborator on a game you remember, the dadgum site wouldn't list him neccessarily. Unfortunately, that means trying to jog your memory to figure it out :-(

Good Luck!
Steven

383. UMich Archive Down?

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-17 00:00:00 UTC
From: stevenposey@usa.net
Message-ID: <3587c4bc.1462969@news.ioa.com>

Is anyone else having trouble getting into the UMich archive? I've tried for the last week and it won't connect. Pinging the IP address also times out, which tells me the machine or the network it's on is down.

Any news?

Steven

Thanks Steven! Actually I e-mailed James Hague - who compiled the list - and he replied that he had been e-mailed by Frank Cohen who told him that it was a complete list of the games he had done! Still, as you say, he could well have been a minor collaborator on something else - I think that actually is what I remember. Still, it was a great game - whatever it was!

Gareth.

I think the most recent version of SIO2PC is 4.16, which can be
downloaded from
http://home.t-online.de/home/tgrasel/sio_416.zip

There is other nice info on the web pages from Thomas Grasel:

http://home.t-online.de/home/tgrasel/restarte.htm

The docs that came with 3.19 already stated all this.

A quote from the docs:

>Note that when you choose double density, the basic 1, 2, 3, & 4 choices
>won't be seen as a standard size, but the equivalent chosen from sub
>option 6/More WILL, for technical reasons too boring to go into here. As
>I've said, this usually doesn't matter, because most DOSses don't use the
>GET/SEND configuration capabilities anyway.
>
>You could compute some standard sizes like this:
>
>Number of Sectors = (#TRACKS * #SIDES * # SECTORS/TRACK)
>
>Size in Bytes = (Number of Sectors) * (#Bytes/Sector)
>
>(For the Size in Bytes, subtract 384 for double density, because the first 3
>sectors are always 128 bytes.)

The docs as of version 4 of SIO2PC also documents the format for
copy-protected ATR images, since SIO2PC can now also hook up
a 1050 drive to the RS232 port and read data from it, although you
need a modified SIO2PC cable for this.

You might want to ask Nick Kennedy about the weird 183K format.
His E-mail address is in the docs too.

Keep those XL's/XE's humming.

To answer the first question:

- ACE C (John Palevich & Ralph Walden) [D]
This is a newer version of 'Deep Blue C'.
- C/65, Tiny C (OSS)
- C65
- CC65, 1989 (John R. Dunning) [D]
This public domain package includes; compiler, linker,
assembler and object librarian.
- CC8
- Deep Blue C, Version 1.2, 1982 (John Palevich, APX) [D]
Drawn from Ron Cain's public domain C-compiler.
- DVC C, Version 1.01, 1985 (Ralph E. Walden) [D]
- LightSpeed C, Version 1.08, 1986
(Clearstar Softechnology) [D]

I have a voice command module also known as Chirpee(tm) for the Commodore 64. I looked up the patent #4284846 on the IBM patent server to get a block diagram. The thing processes the sound input and provides three serial outputs labeled hiss, delta and ampl. Does the covox box work the same way? Maybe I can get it to work with the covox software. If so, where can I get or download that software?

If all else fails, where can I buy one of those covox speech recognition boxes?

Thanks,

Patrick Robbins

I found a strange cart today, its not a normal 400/800 cart case.
There is a white molding around the cart and chip, and a label that
says "The Pill" and at the bottom it says "U.S. Patent Off."
There is an On Off switch at the top of the cart. I can scan this if
anyone wants a scan.

What is it?

Thanks

406. SuperVideo 2.1XL now on the web

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-18 00:00:00 UTC
From: lmcclure@ibm.net
Message-ID: <MPG.ff297d7806cd10d98968a@news2.ibm.net>
Source record: 62018

A preliminary version of the "Super Video 2.1XL" article from the December 1993 issue of Atari Classics is now available via the World Wide Web at:

http://members.delphi.com/lmcclure/svxl/index.html

Nothing fancy yet...no hyperlinks, no graphics; just text and a few tables. The next step will be to add in the diagrams from the article.

Any suggestions on how to improve this web page are also appreciated. If anyone has a digital camera, a video camera + hi-res capture card, or a regular camera and a scanner, and would like to supply pictures of each step of the modification for any of the machines covered (800XL, 600XL, 1200XL), they would be a big help!

the above msg i am replying to is the only one i received so if this has
already been said, sorry.. :)
But I thought the game was written by Chris Crawford.

Hi fellow-Atarians,

Just 'slightly' off-topic, this August I'm planning to go to London again (I was there in April for a conference) and I would like to know if somebody could recommend me an acceptable low-budget hotel? Last time I stayed in a 50 UKP hotel at Gloucester Road (expenses paid by my boss) and saw a lot of hotel signs advertising for 15 - 30 UKP but I forgot to write down some names. Any suggestions? (Prefereably (sp?) at about 15 mins. by tube from Leicester Sqr.) Thanks inadvance!

ObAtari8bit: While I was cleaning my drawers last night I stumbled upon a pile of atari related papers with programming ideas I never finished. They turned out to be from late 1994(!). Never figured it's been so long since I actually programmed on my Atari. Maybe I should boot my Atmas-II floppy again soon :-) Anyway, today I browsed through the umich archive again and I couldn't find anything that was released after 1995. Are there any new programs/demos/whatever released after that? Not much I figure. Some Polish stuff maybe?

That's right. It was Chris Crawford. I remember reading an interview with Crawford where he mentioned Scram had been written in BASIC. Whatever happened to Crawford anyway?

410. I need to create or have created some ATR files...

So I have a few atari games that I would like to get converted to ATR format...

Right now I don't have a Atari that works, so could someone, preferably in the
Detroit are, but if not thats cool to, help me here?

I have the following games I would like put into ATR format...

Dunjonquest
Datestones of Ryn
Morloc's Tower
Hellfire Warrior
Dragon's Eye

Star Trek 3.5 (From Adventure International)

Several disks from Softside Magazine...

Once I have the ATR file, I will post them/submit them to the various NGs and FTP archives...

Any help would be appriciated

Thanks

Chris Crawford wrote some pretty neat stuff. "Legionaire" was his and he was one of the three that wrote "Excalibur". What was great about "Legionaire" was how he could cram so much into so little memory. Just about every bit of every byte was used for something. "Excalibur" was big enough that it had to be loaded from disk in parts, depending what part of the game you were in. It was kind of a drag waiting for parts to load, but the game might be fun to try with an emulator now, or an Atari using APE Warp Speed.

Ok, maybe I wasn't very clear... I meant the FTP archive at atari.archive.umich.edu. I'm guessing that it's just server overload. I've switched to the wuarchive mirror and all it well. Sorry, Ivo, but Missouri USA is much closer to me than Amsterdam, but thanks for your help!

It's a part of a cartridge "backup" utility. The cartridge you have is
used to run cartridge backups off of a floppy in conjunction with special
software that came with it.

Oh well. I'm mirroring the umich archive, OLGA and the lyrics archive for
over a year now and never experienced much traffic (about 5000 hits a year).
Only recently I advertised its adress here and on rec.music.makers.guitar
but it's still very quiet. But I don't care. At least, I have a local
copy of the archives. :-)

The Pill was/is sold by CSS, still in business,
one of the last firms in the US producing
hardware/accessories for the Atari 8 bit.
Suggest you contact the owner, Bob Puff
to find out about purchasing replacement
software for it. CSS/Bob Puff is listed in the Vendor FAQ.

The SCRAM docs say "Start Cutting..." but given the nature of the original
experiments, I would say "Special Control..." would be MUCH more accurate!
What's your source for the "Special Control Rod Ax Man" definition? Is it
really historically defined that way?

+-Since there are no moving parts(that I know of, besides the keyboard of
+-course) in the 800 XL, I'd leave it on all the time. I think the disk drive
+-has moving parts. Eventually, the motor will die on the thing. If you're
+-worried about unclean power spiking the equipment, you could buy a battery
+-backup which smoothes the power as well as supplying backup power.
+-
+-
I turn my Atari stuff off if I'm going to teave it un used for over 12 hours.
Even surge protectors fail. Are these on a BBS or up for e-mail?

From: Peter Mancini <peter_mancini@onesource.com>
Message-ID: <6mdtro$1lh@fridge.shore.net>
Source record: 62050

I have a large collection (junk heap according to my wife) of working Atari 800's, software, disk drives, paddle controls, power supplies, etc. Many of the software packages are unopened. I got it in trade a few years ago for rent. I never did figure out what to do with it and now I am moving and need to unload this stuff. So I could not be bothered with some damn auction. I'm giving it away for FREE. They say nothing is free anymore, well they are wrong. One man's burden is another's bonus.

If you want it you can email me at peter_mancini@onesource.com. I work in Cambridge and live in Woburn. You figure out when we can meet and the stuff is yours. I might be willing to drive IF you have an extra copy of Galaxy Raiders on cartridge available.

This is not a scam. I just don't have room in the new apartment for the other love of my life and the computers and it isn't hard to figure which one is going to get the boot.

Hope to hear from you -- soon! :-)

I have an Amiga 1200 and I need to upgrade it to at least a 50MHZ 030 with
the ability to take it up to 16MB of ram at minimum.

I also need a SCSI controller for it, or else a 44 pin to 40 pin IDE adapter.

If anyone can help then that would be awsome!!

Thankx!

HI,

I have:

(1) Atari 2600 with about 11 games
(2) Atari 600XL computer with Atari Writer word processor
(3) Atari 1030 300 baud modem
(4) Atari 1050 printer
(5) Kyan Pascal/manual for Atari
(6) A lot of blank 5 1/2 disks

I also have some extra cables & power supplies.

Please make an offer on these items and take into account that I have to ship them. Thanks.

Rob

I've come across approximately a dozen TV-computer switch boxes that connect the Atari to a television.. If anybody wants any or all they are yours for the asking. All I ask is that you pay the shipping from NY. I do not know if they work or not, but if someone is willing to try them out you can have them.

Thanks

Jack

That dirtbag really seems to get around. Just about every newsgroup
needs to be warned about him. I even see posts by him in the
automotive market place, anyone interested in paying $30.00 for a can
of Fix a Flat? Its the very best stuff on earth ya know, and its
guaranteed to work. Can you imagine trying to get your money back
from that guy (provided you got what you ordered in the first place).

Hi, all

I have an Atari Jaguar with 56 games for sale. I have boxes and instructions for everything. Most games only played once to make sure they worked. All but two games were bought new and they are noted on the list. I am asking $500.00(US) which I feel is real fair for everything you get, which makes it only about $8 per item. If you are an Atari collector this is a great investment. Will sell only as a whole package.

Here is everything I have:

Jaguar unit
Jaguar CD unit
2 Jaguar controllers
1 Jaguar Pro controller
1 composite video cable
1 Gravis Blackhawk Joystick (modifed to work on the Jaguar)
1 Memory track
1 Team tap

Games (cart)
Alien vs. Predator
Atari Karts
Attack of the Mutant Peguins
Breakout 2000
Brutal Sports Football
Bubsy (used)
Cannon Fodder
Checkered Flag
Club Drive
Cybermorph
Defender 2000
Doom
Double Dragon V
Dragon The Bruce Lee Story
Evolution Dino Dudes
Fever Pitch Soccer
Fight for Life
Flashback
Flipout
Iron Soldier
IWAR
Kasumi Ninja

Missile Command 3D
NBA Jam
Pinball Fantasies
Pitfall
Power Drive Rally
Raiden
Rayman
Ruiner Pinball
Super Burnout
Supercross 3D
Syndicate
Tempest 2000
Theme Park
Trevor McFUR
Troy Aikman Football
Ultra Vortex
Val D'Isere Skiing and Snowboarding (used)
White Men Can't Jump
Wolfenstein 3D
Zero 5
Zool 2
Zoop
Games (CD)
Baldies
Battlemorph
Blue Lightning
Braindead 13
Dragons Lair
Highlander
Hover Stike 2
Myst
Primal Rage
Space Ace
Vid Grid
World Tour Racing

Buyer pays all shipping charges.

457. Joint Meeting of OHAUG and LIAUG -- Internet access with 8-bits!

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-20 00:00:00 UTC
From: Alan Sharkis <asharkis@erols.com>
Message-ID: <01bd9ca1$ab584b40$7ac2accf@asharkis.erols.com>
Source record: 62069

I just got back from a joint meeting of the two user groups to which I belong on Long Island -- The Ol' Hackers Atari User Group (exclusively 8-bit) and The Long Island Atari User Group (all Atari products.) We had two important items on the agenda, and both were demos.

Frank Walters, who used to write articles in many of the Atari magazines, runs a BBS (T.A.C.O. Bell in Panama City, FL) and is something of a TextPro expert was visiting here from Forida and gave us a demo of some of the work he's done in TextPro, including a Text-Pro-specific handler for the CX-85 Numeric Keypad.

We were also, by special arrangement, able to get a working phone line into the library so that we could access NassauNet, the Library System's Internet Access, which is free to all Nassau County library patrons. This system is not designed as a full-featured ISP. It has a Web page, from which there is access for Windows and Mac-based users. It also has a rather limited Unix shell that can be used for text-based access by "older computers." Well, we used it, at as low as 2400 baud, with an 8-bit running Ice-T 2.72. We were able to send and receive e-mail, view several newsgroups, including csa8, and check out other features in PINE, including the address book. We used Lynx to access several pages, and I must say that you guys maintain great pages, but some of you should be doing more for the people who only have text-based access. We were able to telnet to a FidoNet BBS and access the National Atari Echo, where we posted a message.

What we weren't allowed to do was download files or attached files. The library system just isn't set up for that and probably won't be. It might even drop PINE and Lynx support in about a year, but not if enough users make it worthwhile to keep.

I believe we converted guys who owned modems and never used them to Internet users as a result of that demo.

Yes, I know that such stuff is below the general level of expertise we find in csa8, but if you think about it, there is great value in stating that it can be done, and it can be done with an 8-bit!

I downloaded SAM last year from some atari archive but I never got around to transferring it to the atari. I haven't tried it with an emulator but I don't think it would work. There are some shareware text to speech programs for the pc around. I think all of those sound about the same and have that retro-sounding voice you're looking for.

Interestingly enough, someone who knew me from my old atari days emailed me, knowing about the compilations I was doing of some of the cooler basic games.. (escape from epsilon, motocycle maze rider, and gold rush come to mind)

Ah, I miss those days...who programs anymore?? Games are just so cheap now, and so much slicker.. too bad there are that many good ones that are as addictive...

Drelbs, zepplin, shamus, rainbow walker.. now it'd be nice to see 90's conversions of THOSE games!!

Thanks for the help. I found the program and I tried it using Atari800 (dos)
and it works great. The problem was when I tried it before I would disable
basic and just boot right to the program. Turns out you do have to have
basic enabled. Thanks again.

Dominik

The cheapest place I remember staying (that still didn't make you feel
like you've compromized your safety :-)) was one of the
state-sponsored hotels off the highways. Of course, you need a car for
that, but it was damn convienient actually if you have one.

It really sucks not knowing ahead of time where you want to go. Last
time we went my fiance and I were so burnt out from our flight back
from France that we just stayed in the Heathrow attached airport (a
Hilton, I think). Man, that was ridiculous. It was like 90 UKP a night
or something.

Minimum bid is $1, no reserve. For a picture or to bid, please follow this link:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=18354169

This is an Atari compatible disk drive, the Rana Systems 1000. It comes with the original box, styrofoam inserts, drive cable, leather cover, and disk drive. From the back of the box: "The disk drive that has all the answers. Rana offers you a myriad of features like five electronic functions on the front panel that give you a LED readout when touched. Our disk drive tells you what track you're on, and what density and how much information you're storing. It provides a choice of either single density of 88,000 letters or double density of 176,000 letters on a single diskette. And, we have a write protect feature which protects your diskette from being erased. In fact, no other drive can offer you that." Buyer prepays plus shipping. Thanks, Alex.

Hajjej- if I remember correctly, most net providers won't go slow enough to
work with any XL compatable modems.
Even if they could, it probably wouldn't be worth the time spent twiddling
your thumbs!
That's assuming you don't have to pay for local calls (I do ;-( )
Still, if you already have net access and a cheapo XL modem, give it a go!

I have the following Atari 8bit packages, components and cartridges for sale. As I am moving, I would like to sell them and am open to reasonable offers other than my posted asking prices. If you are interested in something, please make me an offer in U.S. Funds (buyer pays shipping). All the equipment is in working condition, but without boxes unless noted.

If you are interested in any of these items, please respond to jlazarenko@NOSPAM.shaw.wave.ca (removing the NOSPAM section first)

Packages
==========
I am taking reasonable offers on this package It is being sold as a package only, I am not splitting the games up. If you want, I can also incorperate a matching 1050 drive to go with this package.

-Atari 800XL With Power Supply, RF Cable
-2x Suncom Tac-2 Joysticks

And the following cartridges...
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Final Legacy
Missle Command
Pole Position
Realsports Football
Robotron: 2084
Star Raiders
Tennis
Moon Patrol

Hardware
==========
-Atari 800XL With Power Supply, RF Cable
-Atari 600XL With Power Supply, RF Cable
-Atari 1050 Disk Drive With Power Supply and connection cable
-Atari 1050 Disk Drive Without Power Supply
-Indus GT Disk Drive Without Power Supply and connection cable
-Atari 520 ST Missing all accesories
-Custom made Atari RGB and audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
-Custom made Atari ST Composite Video/Audio cable (standard RCA jacks)

Controllers
==========
-Paddles (multiple sets)-for Atari & Commodore units
-2x Suncom Tac Joysticks-for Atari & Commodore units
-2x Wico Joystick (Black handle with grey base)-for Atari & Commodore units
-1x Spectravideo Joystick with suction cup base-for Atari & Commodore units

Cartridges
==========
Atari Writer
Basic
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Eastern Front (1941)
Final Legacy
Frogger
Miner 2049er
Missle Command
Ms. Pacman
Pac-Man
Pole Position
Qbert
Realsports Football
Robotron: 2084
Star Raiders
Tennis

Books and Manuals
==========

Message-ID: <358D959A.E9014E57@startext.net>
Source record: 61952

Hi gang!

I would like to purchase the following:

A cable that will allow me to plug my Atari 800 directly into a
Panasonic CT1300D RBG/Video monitor. The Panasonic monitor uses a
retangular 8-plug jack that I am not familiar with.

A complete Atari 800XL with disc drives and either a 1200 baud direct
connect modem, or an 850 configured with a modem.

A C programming book for Atari 8-bits (if such a thing exists).

Please email me with what you have!

Thanks

Dan

From: peter@soemtron.handshake.de
Message-ID: <6wGCF7MpzHB@peter.soemtron.handshake.de>
Source record: 61953

Howdy !

I always asked me how to create really good graphics. What programs do I need to do so?

Most paint progs are a pain - lousy joystick interface or small functionality. Are there any painters which are using a st or amiga mouse? (except S.A.M. painter which is really a pain). Which programs give me enhanced functions to do rastered or pixelized graphics?

The other way - I could paint with Art Director on my ST and convert them to an atari 8-bit image-file. But how to this pain? 16 Colors in 4? What I need is an artifical display list programmer...

So the question is: how did you so great graphics?

Looking to buy Atari 810, 1050, and Rana Systems Drives for my 800XL. Will pay any reasonable price as I need to move some disks to PC. Old drives have something wrong with them (If anyone can fix these I would also consider getting the drives I have repaired as long as it wasn't a fortune). Finally, if I can't find anyone on the list who will sell, is there any commercial options? Please let me know. Thanks for your time and patience.

Cliff

Atari 400.. and yeah, some early games sucked. Newer stuff
(82 and beyond, probably :), but I meant like mid/late 80's) looks
much better.

Unfortunately, so many codes limit themselves to the weaker
graphics capabilities of the Atari's. I've seen a LOT of stuff
out of Europe that uses the 5-color graphics mode (multicolored
text, actually, just like C64) and then 4 or 5 sprites for
the player. A bit too monochromatic for me. :)

> Think with a good programming there would be great games possible on
> an At800. Has anyone ever tried to convert e.g. C-64 hits like
> Turrican 2 to it?

Not that I know of... that'd be quite nice. You'd think it'd be
FAIRLY simple, at least compared to coding it from scratch.
(Remind me what Turrican is about... I HAVE seen it, but years
ago, I'm sure... is it for the Amiga too?) I mean, same CPU,
same controllers, similar graphics... ?

From: rich@cstone.net
Message-ID: <358ca11c.6436080@news.cstone.net>
Source record: 62073

There is a new version (2.0) of Atari800Win on my web page,
http://www.cris.com/~Twist/atari800win

There are substantial improvements in this version (lots of bug fixes
basically) so if you are using Atari800Win, go grab it. This way I can
stop answering e-mail and in my 1.5 hours of free time a week work on
new features.

-Rich

Oh yeah. If you haven't heard of it, Atari800Win is an Atari 8-bit
emulator for Win9X/NT. It uses DirectX (or not, depending on your
preferences) and is a native 32-bit Windows app.

Yep. I tend to do a lot of projects on nuclear enengy for various reasons,
and when the first nuclear pile was put together in Chicago, there was a a rod
of boron above it with a rope attached. If anything went wrong he was to cut
the rope, stopping the reaction before it killed anyone.

Or so the plans went :-)

Nowadays it means that a computer turns off the controls to the control
rods, allowing them to fall into the core.

One and a half years ago during Christmas I stayed in the Regent Palace Hotel at Piccadilly Circus. It's not expensive, in the heart of the city, and OK - although the first night we were out in the streets with people in night gowns due to what turned out to be a defective fire alarm. I'm not sure about the exact costs as it was an all-in trip, but it was a low-budget one.

>ObAtari8bit: While I was cleaning my drawers last night I stumbled upon

Actually thank Perry Mcfarlane, his work on some of the antic stuff has really made a difference in accuracy, along with Radek's CPU code (the Atari800 base now has by far the best 6502 core out there).

There is still work to be done, most notably I'm worried about keeping various hw registers out of the Atari memory segment instead of using the supplied memory of the Atari, but outside of going to a single cycle core (which I've experiemented with) most of it is small stuff. I'd really like to get Autoduel working though.

Just an update to my earlier message since some of the Hardware has sold already this afternoon, and I am getting a lot of emails on it. I have removed the sold hardware, and added a couple of disk drives to my previous listing.

Hardware
==========
-Atari 800XL With Power Supply, RF Cable
-Atari 600XL With Power Supply, RF Cable
-2 Atari 1050 Disk Drives Without Power Supplies
-Indus GT Disk Drive Without Power Supply and connection cable
-Atari 520 ST Missing all accesories
-Custom made Atari RGB and audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
-Custom made Atari ST Composite Video/Audio cable (standard RCA jacks)

If you are interested in something, please make me an offer in U.S. Funds (buyer pays shipping). All the equipment is in working condition, but without boxes unless noted. If you are interested in any of these items, please respond to jlazarenko@NOSPAM.shaw.wave.ca (removing the NOSPAM section first)

> styled monitor. Thank you.

You need a type of cable (usually called a "Commodore Monitor Cable")
which has RCA-type plugs for Video and Audio (or Video, Audio,
Chroma, and Luma) on one end (goes to a VCR, TV or Commodore- or
AppleII-type monitor) and the DIN plug on the other (of course,
identical to the one on the Atari end :))

May be hard to find... Atari stores should carry them. Check the
Atari 8-bit (c.s.a.8) FAQ, part 2 for vendors.

Rich,

Thanks again for all your work on Atari800Win. I've got a new game
of 7 Cities of Gold going for the first time in years! It's 10 times
better than the politically correct PC version released a few years
back, and I'm glad to have the original again.

I don't actually remember Autoduel, but (just to add my two cents)
I would love to see Alley Cat working. That, and the disk sounds that
you mention in your list of things to do.

Source record: 61972

Most ISPs (AT&T Worldnet included) have no shell accounts available. A shell account is a Unix-based, text only access to the Internet. That's what you need. In my area (Long Island) both the Nassau and Suffolk County public library systems do have such access and make it available to library patrons. That's how I and many of my user group members are able to access the Internet with their 8-bits. Universities often can offer students and staff shell accounts. Other than that, there are two more possibilities -- a Freenet if there's one in your area or an on-line service like GEnie or Delphi. Delphi seems to be preferable to GEnie these days. Note: AOL, CompuServe and Prodigy will not work.

Please understand that for text-based access, even slow modems will do. Nassau County's library system will work at 1200 baud, and I've heard that Suffolk's will work all the way down to 75 baud!

513. 1200XL & Joystick

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-22 00:00:00 UTC
From: craig_glassner@bigfoot.com
Message-ID: <358e982c.11714857@news.wenet.net>
Source record: 61975

I finially got out my 1200XL to set up for my daughter, and I can't seem to get the joystick to work. The more I thought about it, the more I seem to remember that I needed an adapter to use a standard joystick. Is this right? Are they still available (as I can't seem to find it). Thanks for any advice!

Zombies does work fine and has done for ages, 2 things tho :-

1. use Realm of Impossibility as thats a proper 100% version of
Zombies..ie there are monsters in this one that chase you.

2. It might be like Encounter is where you get coruption on screen
depending how you run it. Make sure the extra ram at $C000 is *not* on
in hardware and make sure Basic is not being used!!

Some programs are VERY picky about basic, op sys version right down to
not liking the patched IO which can be turned off.

Hope it helps otherwise I will help as best as possible :)

I was stunned at this release because every time a new one comes out I
sit down and go through it bit by bit and send you a bug report as
requested in the readme. With this release it was like every thing bar
2 were corrected and other stuff improved 100%..

It convinced me that you do read the reports :))) Just kidding :)

Hows the monitor situation coming along Rich and where did the
keyboard beep come from in the DOS version :))

Uh, oh, what does your friend consider to be "hooked up to the net?"
If it equals "Graphical Web Browsing", you're out $50. Other than that,
if you can get a 2400baud modem from someone here for $10 and a suitable
VT-100-compliant terminal emulator, and you can find a Freenet in your
area (I might could advise, since that's how I do it) or an ISP with
a shell, then you're on!

521. Memory broken down in 800XL - need technical data

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-22 00:00:00 UTC
From: Zaanradio <webmaster@zaanradio.nl>
Message-ID: <6mmg5c$fg2$1@cadmium.aware.nl>
Source record: 61983

Greetings,

Yesterday I tried checking out my good old 800XL, my first computer, to use it a bit to get the 'computer pioneer' feeling back that I always had (I do that once in a while), but instead of going to the on-board BASIC it started directly with the memory test, and showed most of the RAM as defect. It won't do anything else, but the mem test works fine :-) Apparently the RAM chips have a limited lifetime or so, because last time I used the computer it worked perfectly.

I tried swapping the mem chips, but the fault pattern remained the same, so I guess the 8 chips each hold 1 bit of every memory byte.(Is this so?) However, my local electronics store hasn't had any 4264's for a LONG time. I'm now thinking about using a new static RAM chip with 8x64k or so, but for that I need the connections of the original 4264, and preferably the schematics for the entire computer. Unfortunately I can't find them on any of the XL homepages I found on the web. Could anyone help me with this? I'd really like to get it up and running again.

Replies please to schenkev@dds.nl, because this is a friend's computer with Internet. I don't have full Internet access myself right now.

Thanks!

Tycho Schenkeveld

I have an Atari Trakball which I bought about 15 years ago for an 8 bit Atari. It looks identical to the ST trackballs produced by Atari but for some reason it lacks the functionality - can't use it as a mouse. Does anyone know what the precise difference is - is it something I may be able to modify in order to get it to work with an ST?

Thanks.

Gareth.

I did do the graphics for the Atari 800 games : Laser Hawk and HawkQuest ---
hey! has anyone seen the later game in any archive anywhere???
I'm looking for it, and don't want to transfer it from 5.25" floppies to PC...

Anyway back to the original question: You don't need anything special mate.

You can use special graph paper rules to graphics 7.5 pixel size and
coloured felts, etc.
It's been so long ago, I forgot how did I design those really neat graphics
in Graphics 11 [or was it 9?] in HawkQuest? Check that game out, to see
some of the best graphics? in an Atari 800 game. No boasting here?

For ordinary graphics, there's the Atari Artist touch tablet, the
Atari Light Pen wasn't all that great. There's nothing wrong with joystick,
with Fun with Art especially, or with Technicolour Dream.
I have tons of graphics [well no, but lots] demos and graphics files,
just waiting to be ported onto PC, from 5.25" Atari floppies, would anyone
care to help me out???

The best Graphics are the Atari Robot and Spaceship demo, and the intro
to Rescue from Fractlus [this I have as a demo somewhere], and Ballblazer.

I rate my own graphics at the end of Laser Hawk, and HawkQuest [there's a cheat for this to see it right away] as being pretty good.

TD made more of an impression on me than Rambrandt did, although Rambrandt is still a pretty good program.

529. SuperVideo 2.1XL webpages updated

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-23 00:00:00 UTC
From: lmcclure@ibm.net
Message-ID: <MPG.ff93645dbfef7c198968d@news2.ibm.net>
Source record: 61891

I have gotten around to a few updates to my SuperVideo 2.1XL pages at:
http://members.delphi.com/lmcclure/svxl/index.html

Instead of a single page, it is now split into 7, primarily to allow for the loading times to stay low as the graphics are added.

At present, only the Alchemist logo, and Figure 8 (600XL parts placement) and Figure 9 (1200XL parts placement) have been added.

The 600XL parts placement diagram has been reworked for a cleaner look, and I have started the same for the 1200XL parts placement diagram.

The 800XL parts diagram needs less work, and should be posted soon. (To be honest, I simply forgot to insert it).

The other SuperVideo 2.1XL page at:
http://www.redshift.com/~cdyson/supervid.html
has ALL the graphics from the article, but mine has a significant edge on loading speed now, and the 600XL and 1200XL diagrams on my page are noticeably larger and oddly, a bit smaller in file size (probably due to the fact that he chose to use JPEG format, rather than GIF, despite the fact the diagrams are black & white.

BTW, I am considering that once I have the fundamentals of the pages complete, I may color code the diagrams to match the list of parts in the article that are to be removed, replaced, or added to (with three different colors for the 3 different actions). Any comments on this idea?

Hooked up to the net? Well, the 8-bit is text based, the net is graphics. There are several packages that might work, partially, but you will not have 640x480 graphics in 256 colors (considered a minimum for net cruising on IBMs or Macs.)

Without a modem or software it will probably cost you well over $50 to do it, however.

The SCRAM manual also tells the same story. I wish I had a copy of the manual now (I somehow lost it in the late '80s). It also had an excerpt from the NRC report on the 3-Mile Island incident. The NRC report shows that it was much less of a problem than the media made it out to be. Interesting reading.

Steven

Nope. Sierra dropped almost all support of Atari computers when KQ1 was released for the IBM PC JR. It's not that it couldn't be done, but it's Ken Williams' position that if they've got a game that won't run easily on a certain system, then screw the system and let the user upgrade. That's still how Sierra does business today, and, like it or not, it's what keeps them in the top 5.

>Thanks
>John Shawler

To call one the "highest DOS" is very difficult. In general, if you're talking about Atari DOS, it's version 2.5. Versions 3.0 etc. were not very successful nor did they really add anything to what 2.5 was already doing. Yeah, I know there's some technical differences, but if you want something better than DOS 2.5, I'd go with MyDos or SpartaDos before I'd use Atari DOS 3.0.

There really is no one perfect DOS that will satisfy every user, so you're best bet is to get all of them you can find and see which one you like.

Good luck
Steven

> 6502 with a built-in primitive sort of MMU.

Oh dear...here we go again. Yes, the 6510 does everything the 6502 does,
plus it has a special line called AEC which is used to allow another
device (i.e. the VIC chip on the C64) to take control of the bus (hence,
Address Enable Control). I'm sure there are other differences too, but
this is the biggest one.

The 65C02, it's been said, is simply a CMOS version of the chip. IIRC,
Atari Lynx also used a 65C02, but some additional changes were made to
the chip besides the CMOS (like removing undocumented instructions and
adding others, or something of the like).

<sigh> This thread will last for about three weeks or so.

> know that it will not work using a standard Atari drive power supply.

Yep, I had this problem a few months ago. Whatever you do, don't use
the standard Atari drive PS like I did. As William said, I made me an
Indus door stop. ;)

Here's one reply I got from Lenspencer:
The supply that comes with the Indus GT carries a DataByte label, and
is an 11.5-volt DC, 1.95 amp supply. A 12-volt DC supply
rated at least 2 amps should work just fine, just don't go
over 12 volts.

Once I found the right supply, the drive worked like a charm (Indus
sure did make some nice drives!)

-einhard the indus drive fryer :)

Does anyone else remember the Phantasie RPG series? I spent forever playing Phantasie II when I was younger, and I remember being so impressed by the fact that the music would continue playing as the program loaded.

I'm going to go out on a limb and ask if anyone has Phantasie II as ATR or XFD images. I own the game, but my Atari disks and I are far apart at the moment. It's not in any of the archives I can find, and I am beginning to wonder if I'm one of the only people who owned it. Would some kind soul enable me to play my favorite old CRPG again? Many thanks in advance.

Also, there was another sequel, Phantasie III: The Wrath of Nikademus. I've seen this one for the Apple II, the C-64, and even the PC, but was it ever ported to the Atari? As I recall, it had some significant refinements to the game engine, and it would have been interesting to see it on the Atari.

If you've seen lots of ads, most likely there is an abundance of 2600s in your area. I'd offer about $10-15, and that's generous. :) I've seen people who couldn't *give* them away. (Of course, where did they all go when *I* was looking for one? :)

Well, technically, it's not an MMU. It's just an 8-bit output port that
Commodore uses to control bank-switching and such. It's actually quite
similar to Atari's use of PIA port B to control memory bank switching in
the XL/XE systems.

>The 65C02, it's been said, is simply a CMOS version of the chip.

It also has a bunch of new instructions. Also, most (if not all) of the
undocumented 'mystery' instructions that worked on the 6502/6510 won't
work on the 65C02.

>Atari Lynx also used a 65C02, but some additional changes were made to
>the chip besides the CMOS (like removing undocumented instructions and
>adding others, or something of the like).

The changes were in the chip before Atari got hold of it. The 65C02 was
used in the 'enhanced-model' Apple IIe and also the Apple IIc.

>For ordinary graphics, there's the Atari Artist touch tablet, the
>Atari Light Pen wasn't all that great. There's nothing wrong with joystick,

Difficult for good sketchy curves.

I used an Amiga to do graphics for one of my games ("Space Bar"), and ported
them over with an AMOS program that generated Atari cassette tones(! - not
the ideal Amiga language for a "serious" program, but the fact it worked at
all was surprising). It meant I could use my favourite paint package at the
time (Brilliance 2.0) and a mouse to draw the graphics, and the results were
reasonably good considering my lack of graphics expertise.
The game code itself was a horrible mess by the end though, because I didn't
plan it out properly- I wasn't very disciplined in my planning at that time.
Urrrgh!
Still, bit off-topic there...

E-mail me the cart and I'll--never mind, heh.

You can dump the cart to a file from DOS (or from the Assembler Ed itself for that matter) by doing a binary save. Just use the start and ending of the cart address space for the parameters. As everyone knows, it goes from $A000 to $BFFF. Assuming Atari800win can "insert" cartridge images (sorry, I haven't used it myself, but any self-respecting A8 emulator should), you've got it made.

558. ANNOUNCE: Atari TrueType Font is Done!

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-24 00:00:00 UTC
From: marksim@bitstream.net
Message-ID: <marksim-2406982253550001@port152.bitstream.net>
Source record: 61920

It took a bit longer than I expected, but the TrueType font based the
Atari 8-bit character set I have been working on is finished. It will be
on my website sometime tomorrow (June 25) at this URL:

http://www2.bitstream.net/~marksim/atarimac/font/

It is actually three fonts:

Atari Classic Chunky
A pixel-for-pixel interpretation (think "stairsteps")
Atari Classic Smooth
A version with the jaggies flattened out (think "ramps")
Atari Classic Extrasmooth
Similar to Smooth but with curves (think "slides")

This is freeware and is available in both Mac and PC (Windows) formats.

(Note: some characters will not be accessible, depending on your OS, since
some of the A8 characters occupy special low-ASCII locations which have
special meanings to Macs and PCs.)

You can use 41256 chips in place of the 4164s. You will still have only
64K, but the chips just drop in.

Bob

Well there was a quick reference on Umich which should give you some
specifics. Do you mean like the Action Library (procedures and functions)?
Just like in C, it's the function libraries that really let you do stuff.

Reserved words I would think are along the lines of stuff like PROC,
FUNC, RETURN, IF..FI, WHILE..DO..OD, DEFINE, MODULE, etc... But then is
that what you were looking for?

Later...

I would say the biggest difference is the 6 bit I/O port on the 6510.

The net is not graphics-based, only the web is. FTP, gopher, irc,
telnet, and e-mail are text-based, and with Lynx many web sites can be viewed
as text based. Now all that is needed is a copy of Lynx. I can only seem to
find the Linux version.
Still, it is a possibility, I suppose. BTW many ISP's are text-based but they
do not even know it. Try calling their number with a terminal program and
looking at what pops up.

567. ATARI Equipment MUST SELL...

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-25 00:00:00 UTC
From: The Watcher <Use-Author-Address-Header@[127.1]>
Message-ID: <3597c8f5.27532419@207.126.102.10>
Source record: 61929

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
connector, original cost $599.00, Joysticks $19.95 each, asking $50.00
or best offer. These SELL AT Video 61 for $49.95 used.

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
manual, power supply, connecting cables, oil, original cost $399.95.
Also have a non-working 1027, can be fixed at any Atari service center,
both printers cost new $399.95 each, asking $100.00 for both of them.
Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00. These
sell at Video 61 for $74.95, same price.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for
$59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

"Gareth" <garethd_@dial.pipex.com> writes:
> About 2-3 months ago someone did manage to post here from an Atari 8 bit
> computer - does anyone have any details?

Well it wasn't me, but I can (and used to, before I got my university account) do that. When I'm at home all my internet access is via my Atari (a 65XE). Reading from and posting to usenet and this group is do-able, as is e-mail and www (via Lynx). With free local calls then reading and posting to usenet isn't a problem (unfortunately I have to pay for local calls, so I tend not to do it 'cos it works out expensive on phone calls). As has been stated before you need a shell account (one with a text only interface) to do it. You'll also need an 80 column terminal emulator for your Atari (Ice-T or FlickerTerm 80) which are available at the archives. The other thing you need is to know what programs are available on your ISP for usenet access. Common program are rn, trn and tin, even programs like pine and emacs can be used to read/post usenet. Try man rn, man trn, etc. . to find out more about the programs.

If you're reading on-line then modem speed isn't too big an issue (as long as you ISP supports that speed), as you're likely to spend more time reading the news than waiting for the next page to display. Of course if you want to do any downloading, then faster modems mean waiting less. I've got a 2400 modem connected to my Atari (well it talks down the phone line at 2400, but modem to Atari runs at 9600), but it's not a direct connect modem, it needs a separate interface. And its adequate for my needs. I'll leave it up to someone else to explain the different ways of connecting modems to your atari.

I don't have a running Atari right now, but if my memory serves me well after 6 years, I think you can find most reserved words by browsing through one of the following files:

Action! itself (I had a disk version, so maybe on cart it's different.
Action! Runtime Library

I'm not 100% sure of that, though.

Jabberwock

P.S. Is it possible to get the cart onto an image, so I can use it on an emulator?

Same problem for me, too. Also, the sound doesn't work now and my full screen
DirectX mode doesn't work either.

I want to go back to my previous version because of all this mess but I don't
have the install files for it. Does anyone know where to find the last stable
version before 2.0?

I really like this emu, and I wish Richard Lawrence all the best. I just think
I'll wait until the next 2.x release.

Steven

BTW: Richard, if you're reading this, I'm running a Hewlett-Packard Vectra XA
Pentium Pro 200, 32MB RAM, and a Matrox MGA Millinium w/ 2MB RAM w/ MS-DirectX
version 3.0 and a SoundBlaster AWE 64. Any problems with any of the hardware I
should know about?

I guess everyone thinks Winblowz95 is the only os out there. how about
keeping the dos version up to date too.

584. Can't use keypad as joystick in Atari800Win 2.0

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-26 00:00:00 UTC
From: telcomeng@my-dejanews.com
Message-ID: <6n111cvsh1@nnrp1.dejanews.com>
Source record: 61849

Somebody please help! I can't get the keypad to work as a joystick with Atari800Win 2.0, even with Num Lock off. I've tried several games files and three computers with the same results. Options/Joystick reports that the keyboard joystick is enabled. I'm sure I've missed something very basic, but I can't think of anything else to try so I would appreciate hearing some ideas from any one.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the
Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL,
800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend,
several people volunteer their time and energies by maintaining Periodic
Informational Postings for this newsgroup. Please take a moment to refer to
these documents before posting to comp.sys.atari.8bit. The answer to your
question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic
Informational Postings:

Eh?.....

The DOS version by Petr has the latest source. Its very up to date and
although the two versions have some differences they are both almost
tied together...

I recently subscribed to the Atari 8 mailing list because I was curious of what it had to offer. I have been impressed by the level of discussion on this list.....however, I must say I am ready to remove myself from it.....the amount of traffic in this list is so great, my mailbox is overflowed with its traffic. I really think this is the kind of thing that should be in this newsgroup. I know the people who started it were complaining that this group only contains noise, and no substance.....but these kind of messages are the exact thing we need here. I DON'T need it in my mailbox!

Any thoughts or comments are welcome.

Regards,

Willy

No you do not need an adaptor to attach the joystick. Perhaps your joystick has craped out on you, get any Atari or other 9pin joystick and try it again if not the you have 1 of 2 chips gone in the computer.

2 Ea Rana double density disk drive power supply and SIO Cable $20.00 shipping included.

For those of you that are unfamiliar with the Rana Disk drive, there are some Atari Programs that will not load on these IE: Flight Simulator II due to the construction of the MECHINISUM they installed in the drive but on most software it will read and write to a format other drives can read. It reads single density, density and 1/2 (Atari Double) and Double density disks. It is the only drive produced that will Format a disk in any density while the drive is not attached to an Atari Computer! Yes that is correct will format a disk in any density not attached to the compurer through switches on front.

598. Atari800Win a few more suggestions

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-27 00:00:00 UTC
From: Bill Kendrick <kendrick@zippy.sonoma.edu>
Message-ID: <3595DD05.81F978AD@zippy.sonoma.edu>
Source record: 61735

Along with SHIFT-support and a fix for that joystick/keypad
problem, I'd like to see the following:

1. Keep running in the background. (Wait, maybe there's already
an option for this..)

2. Make sure all options have keyboard quickies (ie,
under "_M_isc" there's "_G_raphics Speed", "Sound Speed",
and "_C_lear all settings". I assume that you just forgot
to make "S" the key for "Sound Speed", eh? :) Same
under some of the option menus.. I hate using mice, btw. :)

And finally,

3. A shortcut to toggle between "Run as fast as you can" (great
for when stuff is loading and depacking) and normal mode
(useful to hear the music and see the effects. :))

Can you tell I'm doing all my testing with EuroDemos, or what!? ;)

Anyway, GREAT work so far guys! This app. is AWESOME!
I'm SO happy to actually HEAR an Atari 8-bit emulator run,
not just see it run! ;)

And run so well (I get up to 400% speed) on a PC, too! Wow!

-bill!

I hate to do this. Two more.

1. Is keyboard click and disk beep support planned?

2. How about something like 'disk light' for the mac.
Show all of the drives as little icons on the status
bar and have them flash during read and writes?
Maybe let you point the mouse over the icon to see
what file is being used?
Maybe even a little sector display to show where
the reads and writes are going? (I'm so used to APE and SIO2PC)

Thanks!!! Sorry to be a pain! :)

-bill!

Yes, I did toggle NumLock with no success in getting the keypad joystick to work. Other users of Atari800Win V2.0 have reported the same problem, so it appears this program has trouble with certain hardware configurations.

601. DOS 3 bug (old thread from a couple of months back)

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-27 00:00:00 UTC
From: Raphael James Espino <rje@co.umist.ac.uk>
Message-ID: <v7yyaujf47f.fsf_-_@co.umist.ac.uk>
Source record: 61861

marknewtonjohn@webtv.net (Mark Newton-John) writes:

> DOS 3.
> (putting on flame proof suit...)

grin

Seeing as this subject has come up again, I thought I'd post an answer to the question you made a couple of months ago, about DOS 3 bugs. I went home recently and dug out my DOS 3 manual, and lo and behold, the insert listing errata in the manual was still there (its been over 10 years since I got that manual, and the insert is just a loose sheet). Anyway according to the insert there was a bug in early versions of DOS 3 that created problems with random access methods on big files. Apparently the random access method used was incompatible with large files. Unfortunately the insert doesn't give any details (such as file size, or what exactly happens), all it says is that you can check if you've got the buggy version of DOS 3 by doing a PEEK()... can't remember the address off the top of my head, but 1816 rings a bell (the address is also listed in Mapping the Atari).

Personaly I think DOS 3 has been much maligned, because it was so different, it had its good and bad points, one of the worst being all the disk swapping if you only had 1 drive (now if only DOS 3 had come with a ramdisk...), and one of the best being the user interface (disk swapping aside) which IMO was better for first timers than 2.0/2.5, although it lost some of its appeal after you became more experienced. Of course, DOS 3 was my first DOS (and hence has some nostalgic value), so I didn't have the problem of doing the 2.0->3.0 conversion, which would have been a drag. As much as I used to love 3.0 and hate 2.5 (when I first tried it), I couldn't go back to 3.0 now.

On a side note I think DOS 3 was also used on a few commercial games, I seem to remember Level 9's Time and Magik trilogy disk being in DOS 3 format.

I guess people use the mailing list instead of this group to avoid
spam. I don't post very often and get a fair bit of the damn stuff.

As for complaints about the content of this group, take a look at
comp.sys.amstrad.8bit. If this group was like that, you couldn't blame
them, but it's not. Most of the postings to this group are on topic.
Although the stuff about Terry Ortman was getting a bit much,
at least that was Atari related to start with.

IMHO
It's a shame that people split off from the main group because of
nonsense postings and flame wars, this kind of crap shouldn't happen.
If somebody makes a stupid/abusive or off topic posting, surely it's
best to just ignore it, rather than turn it into a blazing row.

Sean...

hello,

Iï¿½ï¿½m using Atari800Win 2.0. Iï¿½m trying to make lowercase letters, but
canï¿½t find that caps-key.
reqadme.txt says itï¿½s 'delete', but nothings happening, still UPPERCASE
letters.
i have a german keyboard & win95 os. whatï¿½s wrong?

thanks for any help or leads.

606. Black Box & CSS

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-27 00:00:00 UTC
From: hug@planetmail.net
Message-ID: <35951208.259407155@news-server>
Source record: 61866

Does anyone know if Bob Puff and CSS are still in action, i.e. still producing Black Boxes? Last time I was in contact with Bob, he was looking for a sufficient number of orders before making another production run of the BB's. I can't find Bob on CIS and the CSS BBS no longer has a section listing products for sale (or else that option wasn't working last night...).

Thanks,

Rob

I don't suffer from insanity -- I enjoy every
minute of it!!!

Actually, no. There was a "DOS 4," which some call Q-DOS and DOS-XE.
Neither were popular for a variety of reasons.

I have the following Atari 8bit packages, components and cartridges for sale. As I am moving, I would like to sell them and am open to reasonable offers. If you are interested in something, please make me an offer in U.S. Funds (buyer pays shipping). All the equipment is in working condition, but without boxes unless noted.

If you are interested in any of these items, please respond to jlazarenko@NOSPAM.shaw.wave.ca (removing the NOSPAM section first)

Packages
==========
I am taking reasonable offers on this package It is being sold as a package only, I am not splitting the games up.

-Atari 800XL With Power Supply, RF Cable
-2x Suncom Tac-2 Joysticks

And the following loose cartridges...
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Final Legacy
Missle Command
Pole Position
Realsports Football
Robotron: 2084
Star Raiders
Tennis
Moon Patrol

Hardware Please make an offer
==========
-Atari 800XL With Power Supply, RF Cable
-Atari 600XL With Power Supply, RF Cable
-Atari 520 ST Missing all accesories
-Custom made Atari RGB and audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
-Custom made Atari ST Composite Video/Audio cable (standard RCA jacks)

Controllers Please make an offer
==========
-Paddles (multiple sets)-for Atari & Commodore units
-2x Suncom Tac Joysticks-for Atari & Commodore units
-2x Wico Joystick (Black handle with grey base)-for Atari & Commodore units

-1x Spectravideo Joystick with suction cup base-for Atari & Commodore units

Cartridges Please make an offer
==========
Atari Writer
Basic
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Eastern Front (1941)
Final Legacy
Frogger
Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
Miner 2049er
Missle Command
Ms. Pacman
Pac-Man
Pole Position
Qbert
Realsports Football
Robotron: 2084
Star Raiders
Tennis

Books and Manuals Please make an offer
==========
-Atari 800XL Manual and conection guide
-Atari 1050 Manual
-Consumer's Guide "The Users Guide to the Atari"
-Compute's "Third book of Atari"
-Compute's "The Atari Basic Source Book"

Magazines and Specification sheets Please make an offer
==========
-1983 Atari 800XL Brochure
-1986 Atari ST Computer Brochure
-ST-Log Issue 10 Jan 1987
-Antic Volume 4, number 10 Feb 1986
-Start-The ST Quarterly Summer 1996 Premier Issue

612. Atari 1027 printer

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-27 00:00:00 UTC

Yep, it's possible.

There are a lot of utility's for it. I have a lot of them on my BBS, but
when you want I can e-mail them to you...

Gtx,
Sysop*TXG

Ps. My BBS is not on-line yet but I can make a test account and you can
download the file(s) by filemail if you want...

Let me know...

I was unable to use the keypad as well. I have tried every conceivable way of getting it to work...but with no success. I finally bit the bullet and went and bought a $14 gamepad. It works wonderfully and all the games I have downloaded have worked wonderfully wit it.
BUT.... I am unable to see the game in full screen mode. while the window that the game is playing in is sufficient enough for me, I would really like to see these games in fullscreen mode. ANY suggestions on how I can configure this emulator for fullscreen would be appreciated!! Thanks in advance!!!

Decent 1027? Isn't that an oxymoron?

I've had dealings with three of those things in my time, and there wasn't a "decent" one in the bunch. The first was in a package with my first 800XL/1050 purchase. It worked, kinda, but the mech would get sticky and the wheels would punch up all the wrong characters. I'd clean it and it would work for a week or so, then right back at it again. Sure didn't take long for that to get old.

The second was in another package--an 800XL, 1050, and 1027 all without powersupplies-$10 for all of them. That one didn't work as good as the first one. I still have it around someplace--someplace deep and inaccessable, I hope.

The third was a gift (what'd that guy have against *me*, anyway?) from a former fellow user group member who was getting rid of all things Atari. I tried it just once to see if it worked, and the ink roller was all dried up. A "new" roller from an unopened package in the same box was barely readable. I packed it away with some other stuff from this guy I didn't really want and put it high up in the back of a dark closet. Fortunately, this guy gave me some very valuable stuff in the same gift, including the two drives I now use on my main system.

As to what one is worth, I'm probably the wrong one to ask. I *could* be prejudiced.

623. Re: Can't use keypad as joystick in Atari800Win 2.0

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-27 00:00:00 UTC
From: Bill Kendrick <kendrick@zippy.sonoma.edu>
Message-ID: <3595CA7F.B5606C55@zippy.sonoma.edu>
Source record: 61883

D'oh! I just tried Atari800Win 2.0 for Win95 myself for the first
time, and I too have this no joystick problem.

I'm on a Compaq Presario (don't worry, it's my roommate's!)
using it's keyboard.

Under keyboard properites in Control_Panel, it states:
"Standard 101/102-Key or Microsoft Natural Keyboard"

Also, may I make a suggestion for Atari800 and Atari800Win..
A lot of programs for the Atari can be controlled with the
arrow keys... the thing is, in a game situation, no
other keys are really used, so instead of sensing the
actual ARROW keys, it sees the un-CONTROL-ed versions
(punctuation chars.)

How about having CONTROL-Windows-Arrow-keys be equal to
un-CONTROL-Atari-Arrow-keys? And/or having a setting
to switch between Win-Arrow = CONTROL-Arrow and
Win-Arrow = Punctuation?

-bill!

624. Can't use SHIFT in Atari800Win 2.0 (ARGH!)

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-27 00:00:00 UTC
From: Bill Kendrick <kendrick@zippy.sonoma.edu>
Message-ID: <3595DBBD.DA0A3A03@zippy.sonoma.edu>
Source record: 61884

Oh no! Atari800Win doesn't handle the SHIFT key correctly!
This is all-important in the demo world!

(BTW, I'm getting side A of the Joyride demo to work great..
so far! I couldn't boot Cool Emotions side A (HARDA.DCM)
for some reason, though.)

These demos test a byte really high up in RAM (my Mapping book's
boxed up at the moment, so I can't look it up) which, among
other things, changes when either SHIFT key is held.

Can we get support for this!? Thanks! :)

-bill!

625. atari800win and 7 cities

Newsgroup: comp.sys.atari.8bit

627. Finding Atari OS/A rom

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-28 00:00:00 UTC
From: BurlingamesSPAM@MEworldnet.NOTatt.net
Message-ID: <6n4mp1$ih8@bgtnsc03.worldnet.att.net>
Source record: 61739

I need some help finding the Atari OS/A rom. It seems that some
applications will only run under this rom. However, none of the
Atari rom collections I can find contain this rom.

Can anyone please help? Also, I'm interested in finding out why
all of the emulators support this rom but nobody seems to have it.

I've messed with my email address, but it's easy to
figure out, and I read the newsgroup everyday.

Thanks for your time --

If you haven't already tried it, make sure both "DirectDraw, Windowed" and "No DirectDraw (GDI)" are unchecked on the Graphics Options menu.

I am sure that Bob will see this message and fill me in.

When my AC subscription finished, I wanted to renew. However, considering the sporatic (at best) nature of AC, I thought I would wait until the next issue was ready before sending in my money. So, my question is.......has it come out? When was the last issue?

Is AC truly dead?

> - LightSpeed C, Version 1.08, 1986
> (Clearstar Softechnology) [D]
>

Some notes:

of the above, I have used Deep Blue C, ACE C, CC8, and C65.

My understanding is that LightSpeed C and DVC C are members of the
Deep Blue C/ACE C/CC8 family, of which CC8 is the most up-to-date.
CC8 implements quite a bit of K&R C. No floating point, though, and
the libraries are not too standard. CC8 uses the ACE C libraries, if
I remember correctly, and the ACE "optimizer" works on its output too.

I used CC8 to teach myself C and had few if any problems working
through the exercises in the original edition of K&R.

C/65 may be a distant cousin, as I think it was also derived from the
Tiny C published in Dr. Dobb's. I have not seen it or used it.

All the Tiny-C-derivative C compilers on the 8-bit that I've seen
compile to bytecodes and run on a simple 16-bit virtual machine. They
are still surprisingly fast, significantly faster than Atari BASIC,
but not as fast as native code.

I purchased source code to Deep Blue C with the compiler from ANTIC
way back when they were clearing out their software inventory. I
don't think (haven't looked at the umich archive in a while) that
source code for any of the later versions (ACE C, CC8) has been made
available. Deep Blue C was really not very usable on the machine I

had at the time, an unexpanded 800XL with one single-sided double-density drive, a US doubled 1050. Also, whatever editor I had at the time sucked and made the edit-compile-run cycle awkward.

CC65 is another beast entirely. At one point it had quite a following. It doesn't (well, didn't when I looked) implement quite as much of C as CC8, but it does compile to 6502 assembly. Source code is available. It can compile itself. It can be compiled on other platforms and used as cross-compiler. There are some clever tools and enhancements written for it, including a simple make that ran under Spartados X.

You will want a RAMdisk or hard disk system to use any C compiler on the 8-bit. I also recommend using textpro as your editor and some recent version of Spartados, since it is easy to flip back and forth between textpro and Spartados. Compile times for small programs by CC8 on my 800XL compared well with compile times of equivalent programs by gcc on my old 386DX40.

None of the C compilers I have seen for the Atari 8-bit implement the full language as described by either the first edition of K&R or as described by the ANSI standard. I would not attempt to port any nontrivial C code from a contemporary platform to the 8-bit with them. On the other hand, they are decent learning tools, and quite sufficient for writing serious software if performance is not absolutely critical.

To sum up: the real choices are CC8 and CC65, both of which are available on the archive. Without a RAMdisk or hard disk, you will be disk-bound and probably won't do much C programming. Get Textpro, too, you'll need a good editor (there are probably others). And don't bother trying to port, say, the GNU utilities to the 8-bit. :)

Brent

Erm, I meant CC65, not C65. I don't know anything at all about C65.

> I used CC8 to teach myself C and had few if any problems working
> through the exercises in the original edition of K&R.

Additionally, if you are going to try programming in C on the
eight-bits, the original edition of Kernighan and Ritchie's The C
Programming Language will do fine if you can find or borrow a used
copy. If you spend good money on it new, make sure to get the latest
edition, even though none of the 8-bit C compilers I know of even try
to implement ANSI C. (I'm assuming here you want to code C on the
8-bit so your skill set will transfer to bigger machines).

Use the browse button and pick where H1: will be on your HD and then in
a DOS program (2.5, SuperDOS etc etc) you can copy to the H1: instead of
D1: etc etc

The readme does give you a bit of help but no one has written the Help
file even tho Rich has asked if anyone is up to it :)

> How much should a decent 1027 printer run, with Cable?

The 1027 isn't worth much; it's slow and rollers are impossible to find,
even though the output looks pretty good. However, if you're looking for
a letter-quality printer to hook up to the Atari I have just the thing;
an Atari XDM 121 (I think that's the model number). It has the power supply
built in (and a cable to plug it in) and a ribbon included, but no I/O cable.
The best thing is that you can still buy ribbons for it (it's compatible
with some Olivetti ribbon, though I forget exactly which). I'll sell it
for $12 plus whatever it costs to ship it.

define dead..... last issue was almost 12 months ago. I am still working
on the next issue (#8 by my count). I have to get better - can't get any
worse!

All,
Actually, that's not right. DOS XE was the last Atari DOS. It came with the last batch of XF551 drives. AtariDOS 2.5 was the last compatible DOS (most common) version used. DOS 3.0 was pretty useless. DOS XE was better and somewhat compatible (had converters built in), but not great. I use SpartaDOS X and 3.2d most of the time, but also have MyDOS and Atari DOS 2.x and some others as well.

If you want the most features and most compatibility with most other usere, use MyDOS 4.51 (is that the latest version?). It is 100% AtariDOS 2.x compatible AND handles hard drives and subdirectories. SpartaDOS does too, but in some cases it isn't completely compatible, especially with AtariDOS 2.5 130K (enhanced density) floppies.

Message-ID: <359795f7.0@uni-wuerzburg.de>
Source record: 61761

Hello!
A friend of mine owns a 130XE. Sometimes it used to produce weird colorful
patterns on the screen an crash, but switching off and on always made it run
again. Now it did NOT start again (ie produced weird colors instantly).
I didn't get a grip on it so far, so I have no idea what it is, but I wondered
if somebody ever faced the same problem and how it was solved.
(-> only very few failures on mass products are unique!)

Please reply by email because I don't read this group!

btw: Does anybody know a site where I can find idiot proof instructions on
building a soft cart (to be loaded by pc/st/anything) for my 2600?

>As proof that King's Quest could've been translated easily to 8-bit systems,
>check out the Sega Master System and NES versions.

I never knew they made ports for those systems. Could it be that they were done at the same time that KQ1 was rereleased after KQ4 to make use of the point-and-click interface? Surely, the SMS and NES versions didn't have the "type-til-you-bleed" interface, did they?

This just restates my point that Sierra moved to newer 8 and 16-bit machines because they were supposedly newer and better. It (apparently) doesn't mean the games were any better.

But... This is the same problem I have. When I try this, I get an "unsupported mode" error, or something like that. The full-screen implementation in this version has enough differences than the previous version to keep it from working even on a Pentium Pro 200 with a Matrox Millenium card.

I'd love to have a solution to this problem, but unless I can find the previous version of this program, I'll keep using XL-It!2.0 and Atari800 for DOS.

Steven

BTW: Now that our second child is sleeping through the night (he's 2 months and 2 weeks old), I finally got the energy to get back downstairs to connect my 130XE back up to my 486DX4/100 with SIO2PC yesterday. I feel like a kid again!

The easiest solution I've found (assuming you've got the Atari and PC connected via either SIO2PC or with a null-modem cable) is to use the TT program that comes with SIO2PC that converts all the carriage return codes for the target computer. If you don't have the SIO2PC program, you can find it by following the Atari links at www.hackerz.com, as well as a myriad of other sites.

Best of luck!
Steven

>prejudiced.

Then so am I. I had a 1027 through most of high school, and I always had problems with it pushing the paper out at an angle, and if I didn't hover over it all the time, I would get pages that looked like they were done by a drunk typesetter!

Besides, being daisy-wheel, you're stuck with the installed charset. I had a lot of fun making custom fonts on the Atari, and I always hated it that I couldn't print out on paper what I had on-screen.

As another prejudiced 1027 user, I say it's not worth your trouble -- save your money.

BTW: I got a 1025 dot-matrix printer recently, and I understand it uses common typewriter ribbons (I didn't get any with it). Is that true, and where can I get them? Thanks.

Hopefully ACE-C is still in existence. Frank Seipel was very active for a while, but I don't recall hearing from him in a while. Last I heard he lived somewhere in Gahanna.

I lived in Columbus for a time till I moved to Florida in late '86, but have lost touch with my old Atari friends there.

Pity it's not a shell (kingcon itself is confused as to what it reall is)

Some people use WShell and there's ZShell out there somewhere. I think
they both support nameless pipes and all that fancy shit.

Cheers,

I used a 1025 for years. Slow, but a reliable ol' workhorse. Text only,
unfortunately.

It does indeed use a two-spool typewriter-style ribbon, the same one used
by the Gemini 10X and Okidata Microline 80 or 82. In fact, the 1025 is
essentially a modified Microline 80. Office Max used to sell them for a
little over a dollar, but the last time I looked for one for my Gemini was
4 years ago. Another place to try is American Ribbon and Toner Co., Ft.
Lauderdale, FL. (1-800-327-1013) Last price I have for them is $.99 each
in lots of 6, with an additional charge of $3/order. They have colors,
too.

BTW, you should know that the 1025 can't accept printer commands anywhere
but the beginning of the line. Any printable character before the command,
even a space, will cause the command to be ignored. Commands may be
combined on the same line. The 1025 will do doublw-wide, regular, and
condensed pica, 6 or 8 lines/inch line feeds, and standard or International
character set. That's it.

Good luck!

TJ

Last time I checked, ACEC was still in existence. I think they had
the fall bits & pieces sale last year as usual.

674. ANNOUNCE: New Atari800Win 2.1 (07/30/98)

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-30 00:00:00 UTC
From: rich@cstone.net
Message-ID: <35986f4f.83187911@news.cstone.net>
Source record: 61786
Cross-posted to: comp.sys.atari.8bit,comp.emulators.misc

Atari800Win is a freeware emulator of the Atari 8-bit computer line
for Win9X/NT. It is located on my web page:

http://www.cris.com/~Twist/atari800win

Here are the new features in 2.1:

06-28-98 Ver 2.1
* The SIO patch option is now configurable on the fly; it doesn't
reboot the machine. Besides the hardware dialog you can flip it
with F11.
* Hardware dialog was reworked to display better on ModeX screens.
Antic dialog is gone; its contents are on the Hardware dialog
now.
* Now using better artifacting code from Perry (text mode still
doesn't work)
* Volume will not be set on MMsystems that can't handle it (what's
up with THAT anyway? Seems to be true for ancient SoundBlasters.
Ugh). Volume slider will be disabled on these systems.
* Fixed SKSTAT handler (could cause missing keystrokes, missed reads
of SHIFT)
* Any nagging sound initialization problems people were having
should be fixed
* Added 48Khz sound output. Most sound cards probably don't support
this; and the WaveOut functions can NOT check for this capability
ahead of time, so be prepared for it to fail. It really rocks on
my SoundBlaster PCI64 though; makes a huge difference for disk
access noises and high frequency stuff.
* Joystick dialog differentiates between "none" and "keypad". Keypad
can only be assigned to one port, and should always work. On 101
keyboards the arrow keys WILL work as Atari arrow keys regardless
of keypad setting. I'm doing it the pristine MSoft way now; so if
it still doesn't work on your keyboard, well, sue Bill Gates or
something.
* Woohoo! Autoduel works! Use 130XE, SIO patch on, and you'll want
to have F8 (full speed) most of the time. One of the best games
ever out of Origin.
* Took out the internal Atari UI until it can be reworked. Too fugly
with the first quicky attempt; and besides it doesn't do anything
the Win UI doesn't.
* Joystick button 2 (if available) flips between full and regular
speed (same as keyboard F8). Button 3 pauses/unpauses (keyboard
F9). Button 4 flips the SIO patch (keyboard F11). Yes, I will make
these configurable later on.

* Pausing the emulator now shades the screen 50%.
* Reorganized CPU code for both (slight) speed and size improvement.
* Fixed SIO bug in drive status (DCOMND 0x53).

(CC by email)
Gunther, my first thought would be to check the power supply. I've had this
happen when a big filter cap lead breaks free from the circuit board(a cold
solder connection). A worse case is the regulator leaking AC into the 5volt
dc line. Anyway, swap the power suplly with a good one, or if electronic
skills are present, open the case and check the parts.

Using Atari800Win 2.0 or later, set up the Atari as 800 OS/B, SIO Patch *OFF*,
no Basic. Boot and go.

> 1. Is keyboard click and disk beep support planned?

Keyboard click would be difficult (except for the XL/XE), but not impossible. Basically the internal speaker becomes a fifth voice of limited range, but any output produced by it (the speaker was basically binary) would have to be real time mixed with the regular sound channels.

Disk beep works fine, providing you don't have patched SIO mode on. The device NAK noise doesn't work though, which I find disappointing. It's been a long time since my computer spit a rasberry at me.

> 2. How about something like 'disk light' for the mac.

> bar and have them flash during read and writes?
> Maybe let you point the mouse over the icon to see
> what file is being used?
> Maybe even a little sector display to show where
> the reads and writes are going? (I'm so used to APE and SIO2PC)

All of these are not particularly difficult to implement but use valuable CPU time for non-essential features. Also, there's no place to put them on non-menu display modes...I suppose they could just be implemented as sort of an alpha channel in the overscan area of the Atari. I've thought about it before, just haven't expended effort (I already get e-mails from people with 486's yelling and screaming about speed).

> D'oh! I just tried Atari800Win 2.0 for Win95 myself for the first
> time, and I too have this no joystick problem.

Fixed in 2.1. I really recommend getting a game pad. They are dirt cheap and work well for 8-bit games.

> How about having CONTROL-Windows-Arrow-keys be equal to
> un-CONTROL-Atari-Arrow-keys? And/or having a setting
> to switch between Win-Arrow = CONTROL-Arrow and
> Win-Arrow = Punctuation?

This is confusing just to read :-). I can't imagine trying to explain it to people. As it stands now the regular arrow keys (not on the keypad) are always the Atari arrow keys, and the keypad can be either arrow or joystick depending on status of numlock. Since both arrows and joystick are available (on 101 keyboards) I'd prefer to keep it with that layout.

> > 1. Keep running in the background. (Wait, maybe there's already
> > an option for this..)

I purposefully did this. It's to prevent the user from being hosed when a Windows modal dialog box pops up and he is in the middle of running up the screen for an important land purchase in M.U.L.E., or whatever. It keeps a focus switch from ruining your game play basically.

> > 2. Make sure all options have keyboard quickies (ie,
> > under "_M_isc" there's "_G_raphics Speed", "Sound Speed",
> > and "_C_lear all settings". I assume that you just forgot
> > to make "S" the key for "Sound Speed", eh? :) Same
> > under some of the option menus.. I hate using mice, btw. :)

Keyboard accelerators exist for all the menu systems. Alt-O brings down the options menu, S brings up the dialog. There is no Windows standard for implementing things like a slider (for volume) with the keyboard, so at that point, yeah, you have to use the mouse.

> > 3. A shortcut to toggle between "Run as fast as you can" (great
> > for when stuff is loading and depacking) and normal mode
> > (useful to hear the music and see the effects. :))

This exists in 2.1 with a joystick/game pad. Eventually I'll work up a control panel that allows assignment of toggle operations to any joystick button/reasonable key. Although finding keys that aren't being used by an Atari sequence would be an adventure.

> > And run so well (I get up to 400% speed) on a PC, too! Wow!

Set refresh = 2, you'll probably get more. I have a debug build that has a toggle for screen updates that can give me 2000-3000% speed on a P2.

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
connector, original cost $599.00, Joysticks $19.95 each, asking $50.00
or best offer. These SELL AT Video 61 for $49.95 used.

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
manual, power supply, connecting cables, oil, original cost $399.95.
Also have a non-working 1027, can be fixed at any Atari service center,
both printers cost new $399.95 each, asking $100.00 for both of them.
Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00. These
sell at Video 61 for $74.95, same price.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for
$59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

Goet,
Do you have the actual SAM (Speech Automated Mouth) program? If not the BASIC program won't do anything for you. You can write loads of programs in BASIC for SAM. I'm working on a little Wizard (8-ball) program that has about 15-20 different responses. Anyway, SAM is a machine language phoneme/text to speech program that you have to run before you can run any other program that uses the speech. SAM should be available from www.myatari.com.

Howdy Steven

Maximum throughput of the BLACKBOX is 19k2 (until somebody speeds up the 6551.
Which should be quite simple. The 6551 will go up to 115k2, with the right
cristal. But the Atari will probable not be able to keep up with that.).

The Atari can go much faster. The XF will do 38k, the 1050 with Happy 52k (I
guess) and in Germany they have 1050 upgrades that will do 72k and even go over
90k!!! Maybe some of the German guys on here can say something about these
upgrades.

He's still around I guess. You just have to call him "voice". The number is
on most of the documentation he wrote (on of the phone numbers on the od docs
has been disconnected. You need the other number :-)) and on Michael
Currents FAQ/Vendor-developer list.

CU Mathy Van Nisselroy

PS yep, it's not a local call of me either (unless Rochester floaded to the
other side of the ocean last night. I haven't checked yet :-))

I'll let the other guys explain the cheap way. Here's the expensive one.

Buy a BlackBox plus Floppyboard and use BBXFER17.COM.

If you only wanna read PC files on your Atari, buy an XF551 and one of CSS's updates/upgrades (one just gets the bugs out of the XF's OS, the other(s) enable you to turn your Xf551 into a 3.5" drive (either just the 3.5" or 3.5" and 5.25" or (not on earlier versions) two 3.5" mechanisums)

There is some emulator talk, but most of it centers around building a new computer that will be Atari 8-bit compatible. There are other advanced topics, too. In addition, there's some promotional stuff from the Polish and other Eastern European groups. All of those topics, I feel, are long overdue in this newsgroup. There's also a proposal to link that mailing list with INFO-ATARI8.

693. Sound in Atari800win

Newsgroup: comp.sys.atari.8bit
Date: 1998-06-30 00:00:00 UTC
From: Alan Sharkis <asharkis@erols.com>
Message-ID: <01bda431$0d5578e0$d0c2accf@asharkis.erols.com>
Source record: 61805

I'm having a problem with sound roughness in Atari800win. It's similar to, but not as bad, as the roughness I experienced with some versions of XFormer, including XFormer '98. I'm using a Creative AWE-32 sound card (non plug-and-play) and Darek Mihocka attributed some of the problems to the latency of this card. However, Atari800 for DOS and XL-It! don't give me those problems.

Since both Atari800win and XFormer 98 run in small windows, with constant flashing of the mouse cursor, I'm wondering if the problem is not in the sound card at all.

Anyone?

I regard KingCon as CON: replacement, although Kingcon does not implement
all the functionality CON: has (ksh likes crashing if run under KCON: i.e)

> Some people use WShell and there's ZShell out there somewhere. I think

WShell is impossible to get (and really fun to configure as I have heard)
and ZShell I have never heard of..

> they both support nameless pipes and all that fancy shit.

You do not need KingCon: to have nameles pipes.

The most likely cause is that your machine overall isn't keeping up with the emulation. Try to find your fastest graphics mode (Use Info/Graphics Speed to test them). If the sound doesn't break up or breaks up less in this mode, it's an overall speed problem, not specific to the sound card as such.

> (non plug-and-play) and Darek Mihocka attributed some of the problems to
> the latency of this card. However, Atari800 for DOS and XL-It! don't give
> me those problems.

Atari800(DOS) and XL-It run under DOS. They have DMA interrupts, something that is not available in Windows. To spare a long discussion, I'll just say it's a lot more difficult to feed a streaming sound buffer in Windows than it is in DOS. But then again, running XL-It in a DOS session brings everything else in Windows to a crawl (and running it in DOS doesn't give you anything else period, of course). Tradeoffs everywhere.

> Since both Atari800win and XFormer 98 run in small windows, with constant
> flashing of the mouse cursor, I'm wondering if the problem is not in the
> sound card at all.

Atari800Win is not limited to running in a Window, it can go full screen and still be a well behaved Windows app. In any case I doubt the mouse pointer is much of an issue, as on most graphics cards it's a very low overhead thing to update the mouse.

Hi Bob. :)

I liked DOS 3. My brothers and I used it a lot. I know it isn't
compatible with the 2.x, but it seemed more powerfull. Even so, 2 or
2.5 seem to be used most often. Of course, SpartaDos's command line
kicked butt, and it's compatibility with the US Doubler and dos 2.0
and multiple drives makes it a great dos for home use.

Of course the Atari can keep up with 115K.... that is about 90usec per
character. Slow, by any standard. The problem is the interrupts - you
can't go away for 2-3ms and expect the stay connected!
I think I can fix that.... :)

>typewriter ribbons (I didn't get any with it). Is that true, and where can I
>get them? Thanks.

I found a box today with some of my old 1025/Gemini 10X ribbons in it. One of
these days I'll figure out why I didn't throw them away...

Anyway, the ribbon numbers are Pelikan Z470 or Nukote BM176. Hope that helps.

TJ

711. WANTED: Jaguar Flash ROM Cart

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-01 00:00:00 UTC
From: KevinManne@wycol.com
Message-ID: <6nc5h8$r3s$1@nnrp1.dejanews.com>
Source record: 61815

Hi:

I'm looking for an Atari Jaguar Flash ROM cartridge. If you have one
available, please e-mail me at KevinManne@wycol.com with your price.

Thanks,
-Kevin

712. 3 Atari 8-bit computer carts...$12 shipped

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-01 00:00:00 UTC
From: swozniak@aol.com
Message-ID: <1998070100293700.UAA24659@ladder03.news.aol.com>
Source record: 61816

I have 3 carts for the Atari 8-bit computers that I'm selling for $12 shipped via Priority Mail. They are:

MegaMania by Activision
Frogger by Parker Bros
Star Raiders by Atari

All carts are in very good shape with the labels completely intact. (No rips, peeling or stickers.) I have excellent references on eBay for those that need them. Thanks for looking.

I guess we all agree: Atari could have been a contender, but it suffered through several managements that just didn't manage. It's no sadder today than when you and I first discussed it; in fact, I think the situation is even brighter today than six months ago because of what I see in this ng, on the mailing lists, in FidoNet, and from users in general.

I need a good terminal program for an Atari 800xl that supports VT-100 (maybe ANSI too?). I have an Atari 1050 disk drive so if someone could send me a disk with a good terminal program(s) on it, I'd be happy to pay for shipping plus a few $$ for your time. If you have a terminal program that fits the above description, let me know!

Thanks,

Sam Hartmann

Yes, this is a problem, and it seems like a lot
of disks are turning up in 130K. Anybody know of a good converion program to
read
Dos 2.5 E/D disks and transfer them to
regular D/D? Will Sparta 3.x or SDX?
Larry

I've just picked up a Commodore 1802 with some strange behavior. It's displaying three vertical bands - 1 red, 1 blue, and 1 green. It does display the text from the XE. All I get on the audio channel is a hum. The question is - is this thing fried in some expensive way or is this a small adjustment that I'm overlooking? Playing with the 1802's front controls has no effect on the colored display...

Thanks,

Rob

That article has no credibility.
Whilst it's fair to include the Atari they totally ignored the Amiga
achievements. The first multitasking GUI on a home computer surely deserves
a mention, doesn't it?
```

All,
Speaking of the Amiga, Gateway has announced that they are working on a
new Amiga computer. OS 4 will be a tempory OS for software companies to
build apps then when the new machine hits the streets next year, it will
have OS5. They said that this machine will be better than any consumer
PC available.

Sam,
Try either Ice-T or FlickerTerm. These should be available at
ftp://atari.archive.umich.edu/atari/8bit/ The Atari Archive at UMich.

The Amiga most certainly wasn't the first multitasking GUI by several
years. However, to be fair, that does depend on your definition of
multitasking and GUI. Earlier systems were task-switchers rather than
multitasking, albeit clever ones and other true multitaskers (286 based)
were written that were GUI but character based rather than pixel based.

When was X-Windows first put together? What about the Xerox Star, did that
multitask or was it 'just' a GUI system, I thought it multitasked(?) and
that was late 70's.

Either Sparta 3.x or 4.x can read DOS 2.5 130k disks and write them out to
a true double density disk in either Sparta or DOS 2.0 format.

MYDOS 4.x can also handle the task.

Neither Sparta nor MYDOS will write to the sectors past 720 on a DOS 2.5
130k disk but they will happily read them.

If he has an unmodified 800XL he needs to know that the version of Ice-T he wants is 1.0, not 2.72. Otherwise, your advice, as always, was on the mark.

I certainly did. But I realize that the article had to include lots of
people who were not Atari fans and needed to be reminded of what was most
popularly associated with Atari -- whether we like it or not.

727. Atari 8 Bit fair in Herten (ger) 98

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-01 00:00:00 UTC
From: schallt@worms.fh-rpl.de
Message-ID: <6ndkdr$3st$1@villon.Fh-Worms.de>
Source record: 61831

Hi to all,

the greatest Atari 8 Bit fair is on it way.

The JHV of the ABBUC (greatest German Atari 8 Bit User Club) will be held in Herten near Dortmund (Germany). The fair will start at 10 o clock and end when the last user is gone (16 AM). The fair shows the last inventions that are made in Germany for the Atari 8 Bit systems (software & hardware). There are vendors and devellopers like Stefan Dorndorf. Stefan has develloped the old Prower Drive XF 351 Os and will release the new Hyper Os for the XF. This updated OS will solve many XF problems for the Xf versions with 5.25" or 3.5" drives. The ABBUC PD Libary will be there, the Floppy Doc, the manual and documentation service, and the head of the ABBUC
will be on the fair. Like every year will there be a great range of software and hardware. The following systems will be supported:

5% VCS, 5% XL, 40% XE and other dead systems like Lynx and Jag (5%).

The software will be wide spread from education to programming and fun. The hardware from 800XL to 130XE or 1050
to XF ... and some things that are hard to find out of Germany.

For more informations visit the following Homepage or E-Mail them.

728. Software to give away!

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-01 00:00:00 UTC
From: Denis Williamson <denis.williamson@cableinet.co.uk>
Message-ID: <359A5AD6.18482F57@cableinet.co.uk>
Source record: 61832

I live in England, U.K. and have a lot of disk and cartridge based 8-bit
software that I no longer have any use for as my hardware has rusted
away.

I would like to give it to a user rather than a speculator and, because
I would really like as little hassle as possible, that would probably
mean giving it to someone who lives in England and/or someone who could
come and collect it (address available to anyone interested).

As I have no hardware, I can no longer guarantee that anything will
still work, but as it will be free perhaps that's not a big risk?

A list of the major items follows, although there are many extra disks
of "Page 6" and "Atari User" origin.

If anyone is interested, or has questions, please send me a mail.

Gateway actually haven't announced anything (AFAIK) but Amiga International
have released those details. They do have full support from Gateway
however, including substantional financial support.
PPC has been dropped in favour of an as yet unavailable CPU/Processor which
supposedly will feature a programmable instruction set.
The new system due in 1999 will be 5-10 times faster then current PII
400Mhz/100Mhz bus systems.
OS 5.0 will be the OS running on this system, with the developer OS 4.0 and
machine (Amiga/PC hybrid) released later this year to allow developers time
to develop applications for the new system and to have them ready when the
new machine is officially released.

Current PPC upgrades will continue to be sold and supported with the manufacturers of these boards (finally) working together to support the Amiga community until the new machine is available.
The OS 3.5 upgrade has been cancelled by AI.

With Gateways backing the Amiga could once again be a viable platform. Besides, we must be due for another platform to kick the shit out of the current Mac and PC systems. How stale can it get ?.

Regards,

Clockmeister.

ATARI ST Software. Complete Software Packages. Assume there is a box unless it says otherwise:
==========

BALANCE OF POWER THE 1990 EDITION by Chris Crawford from Mindscape. 3.5" floppy requires Dual-sided drive. Manual, warranty card, reference card. Box has two small puncture wounds on rear side, otherwise perfect.
VG+/NM
$10.00

BARD'S TALE; TALES OF THE UNKNOWN. Electronic Arts. 1985. Role playing. Two 3.5" floppys, manual, loading instructions, folder.
Good/VG++
$8.00

BATTLEHAWKS 1942 from LucasFilm. Two 3.5" floppys, manual (which is a spiral bound book).. Box is shrinkwrapped except top where opende. 1" tear in flap).
VG++/VG++
$20.00

CAPTAIN FIZZ MEETS THE BLASTER-TRONS. from Psygnosis. 1988. 3.5" floppy, manual. Platform game. Box crushed a bit only on underside.
VG+/NM
$10.00

CHAMPIONSHIP WRESTLING from Epyx. 3.5" floppy, manual, box. Box has been crushed
VG+/VG+
$7.50

ELITE from Rainbird. 3.5" floppy for color machines only. Manual, loading card, warranty card.
VG++/NM
$10.00

FALCON THE F-16 FIGHTER SIM from Spectrum Holobyte. 1987. Two 3.5" floppys, manual, map, warranty cards, lots of inserts. Box is shrinkwrapped except at top, where opened.
VG++/NM
$20.00

HOYLE BOOK OF GAMES VOLUME 2 SOLITARE from Sierra. 3.5" floppy, manual, warranty card.
VG++/NM
$10.00

KING OF CHICAGO from Cinemaware. Two 3.5" floppys, manual, loading card.
VG+/vg++
$20.00

LEISURE SUIT LARRY IN THE LAND OF THE LOUNGE LIZARDS from Sierra. Two 3.5" floppys, manual, reference card, aratist reference card, read-me-first sheet.
VG++/VG++
$15.00

MARBLE MADNESS from EA. 2 floppys, no manual, in a folder/box.
VG++
$5.00

PALADIN from Omnitrend. includes the Quest disk. 3.5" floppys, manual.
VG++/NM
$12.00

POPULOUS by Bullfrog from Electronic Arts. There are 2 differend 3.5" floppys in this package. One has a yellow label #e09731XL and the other is black #352702. The spring for the sliding door is missing on the Yellow label so the black on may haver been a replacement. Manual, warranty card, loading instructions.
NM/NM
$15.00

PRINTMASTER PLUS from Unison World. Floppy, manual, etc. Also included is ART GALLERY I and ART GALLERY II disks and a poster for those disks. Also included is FONTS AND BORDERS floppy plus it's manual.
VG+/VG++
$12.00

ROCKET RANGER. For the Atari ST. Cimemaware. Interactive Movie. Complete with all props, and three 3.5" floppys.
VG++/NM.
$25.00

S.D.I. from Cinemaware.6 Two 3.5" floppys, manual.
VG+/VG++
$20.00

SHADOW OF THE BEAST from Psygnosis. Two 3.5" floppys, manual.
VG++/NM
$10.00

SPACE CUTTER from Rainbird. 3.5" floppy, manual, warranty card. This looks new but there is a 1" scrape on top flap of box.
VG++/NM
$10.00

STAC THE ATARI ST ADVENTURE CREATOR. from Terrific Software. 1988. Two 3.5" floppys, manual.
NM/NM

$10.00

STARQUAKE from Terrific Software. 3.5" floppy, manual, warranty card, aftermarket paper map. Box is still shrinkwrapped except top where opened.
VG++/VG++
$10.00

TALESPIN. AN ADVENTURE GAME CREATION PROGRAM from Microdeal. 1989. Two 3.5" floppys, manual, warranty card, lots of inserts. Box has one 3" wrincle.
VG++/NM
$10.00

TETRIS from Spectrum Holobyte. 1987. Two 3.5" floppys, manual, warranty card.
VG+/NM
$10.00

THEIR FINEST HOUR from LucasFilm Games. Two 3.5" floppys, manual (a spiral bound book), code wheel, warranty card, inserts, reference card.
VG++/NM
$15

TOWER TOPPLER from Epyx. 3.5" floppy for color machines only. Platform game. Manual, loading card, catalog, lots of inserts. Box is shrinkwrapped except at top.
VG++/NM
$7.50

TRAILBLAZER from Mindscape. Floppy, manual, in a folder/box.
VG++/VG++
$7.50

TV SPORTS FOOTBALL from Cimemaware. 3.5" floppy, manual, player guide, warranty card, catalog, lots of inserts.
VG+/NM
$15.00

WAR IN MIDDLE EARTH from Melbourne House. three 3.5" floppys, manual. Missing the paper map.
VG++/G++
$15.00

WORLD KARATE CHAMPIONSHIP from Epyx. Two 3.5" floppys, manual, box. Box has been crushed. Manual has rusty staples.
VG+/VG+
$7.50

ZAK McKRACKEN AND THE ALIEN MINDBENDERS. from Lucas Arts. 1988. Graphic adventure. Three 3.5" floppys, manual, security card, National Inquisitor newspaper, box.

VG++/VG++.
$15.00

ZAK McKRACKEN AND THE ALIEN MINDBENDERS. Hint Book. Lucas Arts. still
usable but missing the red plastic strip fro viewing the book.
VG++
$5.00

ZANY GOLF from Electronic Arts. Two 3.5" floppys, box. No manual.
VG+/NM
$5.00

Floppy disk only
==========

TV TITLES 2.0 from J.P. Deziel Serial # 120.
VG++
$5.00

Here is the way I grade software. There are seperate grades for the
box first, and what's in the box second. For example, VG++/NM would
mean the box is VG++ and the contents of the box is near mint.

Shrinkwrapped (ss)
Self-explanatory.

Near Mint (NM)
This is the highest grade for an unsealed item.
"Mint" is not used as a grade because, without a
microscope and 40
minutes of inspection, perfection cannot be verified
to
everyone's satisfaction. Near Mint ranges from
appearing unused, to an item that may have been used,
but is
without a notable cosmetic defect as evidence of that
use.

Basically, a NM/NM package should be a reasonable
simile to a fresh, unused
copy.

Very Good Plus Plus (VG++)
This grade refers to an attractive,
fresh-in-appearance item that, upon closer
inspection, has been disqualified from the NM
category due to (usually)
one flaw that could not be overlooked.

For boxes, this includes: a small split of the seam;
some clear tape on one corner.
Basically, and this includes the contents of the box
as well, a VG++ item is qualified by having a

noticeable, yet functionally insignificant defect that
verifies that the item has been used. A VG++ item
appears neither blatantly
second-hand, nor does it have the sparkle of
"brand-new".

Very Good Plus (VG+)
This is the broadest grade serving as a catch-all for
any decent, presentable,
average, usable (not marred or defective) item.
People ordering VG+ items
usually are prepared to accept an imperfect item
representing the artifact
that it is, and are going to enjoy it without being
excessively preoccupied
with cosmetic details. VG+ is a fine copy that is
indisputably "used", being
your basic "decent used package" for utilitarian
purposes.

Boxes and contents will have some combination of one
to a few of the following
defects:
partial seam split (with or without clear tape
repairs), minor dirt ring,
some minor warping due to moisture, a creased
corner, small squishing of the
box.
The box and contents must be free of major
defacements, and will certainly not have ALL of the
preceding minor ones on the same piece!

Very Good (VG)
This is the beginning of "rough" for collector's
purposes. A VG record is
usually one that a collector will buy to fill a
"hole" in his/her library until a better copy
comes along. We usually don't advertise items with either VG
covers or discs unless they are deemed scarce enough
to attract a collector
for this purpose.

Good Plus (G+)
Averaged between VG and G,

Good (G)
Items graded "good" are very used and only
presentable to the least
discriminating collector. This classification is
usually employed for
boxes when it's the contents that's worth collecting,
and vice-versa; or when

the component in question is so very rare that its
existence in any condition
is regarded as manna from heaven. It should not be
confused as referring to "Good" COLLECTIBLE

Fair (Fr) or Poor (P) or Missing Component (*)
For advertising purposes, if either box or contents
is either Fair or Poor, we
treat it as functionally missing , and we have graded
only the component
that is G or better, essentially selling that
component "as is", theoretically
without its decrepit companion. In these cases, the
grade should include an
asterisk in place of the Fair/Poor cover or jacket to
reflect its effective
absence.

Supplementary Notations
Condition augmentations: there are some common
exceptions to the overall
condition of an item that merit independent notation
from the
overall grade assigned, rather than being "averaged
in" as with standard
gradeable wear. These are usually after-production
aberrations courtesy of
the record company such as:

Writing on front cover, back cover, label, tape
on seams or spine,
water damage (especially if it's growing "hair"),
applied era "pop-culture"
stickers (such as "right-on" with fist) etc.
These minute details are usually only noted on
rare and expensive items.

"We're not flying...We're falling with style."

Yes, but only if the the system is open and if people are eventually
able to build one themselves from modular components as well as use
industry standard cases, video cards, etc. etc. I don't care WHAT
cool things they put in it if it is going to be another eighties
style closed up box that can only be minimally upgraded with
manufacturer supplied parts.

Apple will yet die of this disease. We don't need another carrier of
it.

733. Commodore monitor cable

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-02 00:00:00 UTC
From: Mknzy@webtv.net
Message-ID: <2645-359B05E7-8@newsd-124.bryant.webtv.net>
Source record: 61645

Where can someone obtain a commodore monitor cable for the atari 8 bit? I read on the FAQ that the commodore monitors are one of the best for the atari, but I need the appropriate cable to get it working. This is slightly off topic, but I hooked it up to my VCR and I got an excellent picture. Do any SVGA monitors have RCA jacks?

> PC available.

If you ask me this new computer doesn't realy sounds like a Amiga at all. It will only be compatible with old amiga apps through emulation. The OS will be completely new and based on a outside developed kernal like BeOS, or Mach. This you can already be done under Linux. It will not include a Motorola CPU, it's probably going to use intels comming Merced chip, or something else shitty. The "new" amiga which will be like a bridge to the new platform which will be released later this year will be based
on the Pentium, so it's clear that they will go for the x86/intel line like everyone else. Don't forget that Gateway has only made intel boxes and never even seen a PPC.

Basicly it's a completely new computer and OS with the Amiga name on it. It's like buying a PC whith the Commodore sign on it. It has got nothing at all to do with Commodore.

What about the Digital Alpha work stations?

That are real computers! After an 8 bit spectrum and a 16/32 bit
Atari it is time to scale up again. Not to a lousy 32bit system. That
was interesting 10 years ago. Nope, time to get 64 bit hardware, that
is progress!

The Alpha processor is for serveral years the fastest processor
available. The newest stuff if quite expensive. But if you go for
the outdated stuff you get a good price. Outdated are:
300-400MHz 21164 processors, they come typically with 96kB
2nd level cache and 1Mb 3rd level cache.
(My system, 300 MHz Alpha 21164, 1MB cache, 64MB RAM, SCSI CD ROM,
1GB SCSI harddisk, Matrox Millenium graphics card and ethernet
network was about NLG 2500 or about 1250 US$, half a year ago.)

Take as OS Linux and you have some real computing power on
your desk.

Bye, Hans

744. Re: Atari Printer Protocol

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-02 00:00:00 UTC
From: Martin Misovic <martin@hdo.sk>
Message-ID: <359BC8D6.CBCD38F8@hdo.sk>
Source record: 61656

The protocol is complicated. Computer sends 4 bytes + 1 byte checksum
to get status from printer. Then computer receives 4+1 bytes as status.
When computer wants to send data (to print), it sends 4+1 bytes as
command
and about 128 bytes as data. This is simple description.

I have implemented simple program in Borland Pascal simulating printer &
floppy drive and is connected to atari (800XE) with serial cable &
voltage
convertor.

martin

```
The Fifth Northern SAM & Spectrum Show - Incorporating 8-Bit Show
-----------------------------------------------------------------

Yes, it's showtime once again! All owners of 8 Bit machines are
welcomed through the gates of this, the Fifth Northern SAM and
Spectrum Show.

This time, we're opening at a BRAND NEW LOCATION! Instead of at
Wetherby, which some people have had trouble in reaching, we have
organised this show for Bolton, in Greater Manchester. The new
location offers a much greater facility for parking, and offers easy
availability by rail and bus.

Whether you be an ordinary user, or any sort of support service
(magazine, software publisher, hardware creator, etc) then we'd love
to see you there. And this time, due to the new venue, we've even
managed to reduce stall costs for anyone wishing to book!

The show is held at Horwich, Bolton - within easy reach of local
buses, trains etc. If you're unsure of where to go, sending an SSAE
will give you directions.

At previous shows, we've had all the top names on the SAM & Spectrum
scene; Crashed, Impact, Quazar, Alchemist Research, Persona, Format,
Fred, Sintech, Blitz Magazine, Flexibase, SD Software, ZX Files and
more .... And they've all been invited for this time around too.

So don't miss out! Be there on the 12th September 1998.

For more details send an SSAE to:

NSSS, 32 Barleyfields Road, Wetherby, West Yorks LS22 6PW
or fax (01204) 453030
```

I just finished converting about 400 disks from Atari Writer Plus. You need to pull up the file then do an Asci save in Atari Writer Control Q, same with the PC do Asci save. Then I put them on an Atari hard drive with a BBS system, downloaded them to the PC, and then converted them to a CD-Rom. So yes it is possible.

Also there is another way, If you have a Happy 1050, there is a file Happy put out that formats the 1050 in a format the PC can read but can not remember the file name or where I put the old disk. It let you work on Text files with the PC and or Atari.

I read this article, but it didn't have much to do with Atari 8bit. They showed a nice picture of an 8bit, and alluded to the fact that at one time the system was competitive and a market leader.

vs

Quoting the inspirational words of Cameron Kaiser.

>> Atari always showed that they had a very shitty marketing. Sad but
>> true. Anyway. it still interests me.. what processor is inside an
>> At800 ?? I remember that the CPC had a Z80/Z81 inside. Was a cool
>> machine too, but I only remember basic coding on it.
>6502, just like the C64 (actually, 65C02, isn't it folks?)
CK> I thought the Atari had a 6502C (not the same thing). The 64 has a
CK> 6510, a 6502 with a built-in primitive sort of MMU.

Here's some information about old computers and processors.
They're not really exact (no sub-models or such..) but I think
they'll do fine enough.

Name Company CPU MEM(def/max)
ZX81 Sinclair Z80A 1k(16k)
Jupiter Ace Jupiter Cantab Z80A 3k
ZX Spectrum Sinclair Z80A 16k(48k)
VIC 20 Commodore 6502 5k(29k)
TI-99/4A Texas Instruments 9900 16k(48k)
M5 Sord Z80A 20k(52k)
600XL Atari 6502 16k(64k)
Colour Genie EACA Z80 32k
Atmos Oric 6502 48k
PS 1500 Sharp *(1) 4k(8k)
Dragon Dragon Data 6809 32k(64k)
Lynx Camputers Z80 48k(128k)
TRS-80 Colour Computer Tandy 6809 16k(32k)
Electron Arcon 6502 32k
SV-318 Spectravideo Z80A 32k(144k)
C-64 Commodore 6510 64k
Elan 64 Elan Computers Z80A 64k(3,9MB)
800XL Atari 6502 64k
MZ700 Sharp Z80A 64k
MTX500 Memotech Z80A 32k(512k)
BBC Micro Model B Acorn 6502 32k
Sinclair QL Sinclair 68008 128k(640k)
TRS-80 Model 100 Tandy 8085-CMOS 8k(32k)
PC Junior IBM 8088 64k(128k)
Apple IIe Apple 6502 64k(128k)

*(1) = the book only says "CMOS-processor". I have no more information
about that one.

The above information was taken from the finnish edition of
'The Beginners Computer Handbook'.

It was published by Usborne Publishing Ltd. in 1983. =)

AFAIK, I some more of that information in a book which I right now can't remember. I could verify that information next time I visit the local library (which would be somewhere around the time when school begins again.. <g>)

Apple has been around for over 20 years. That's a long time for a computer manufacturer. I don't think they'll be disappearing any time soon.

Excellent! I live in Horwich!

There are stacks of pubs there, so we can all get hammered afterwards.

Well, the order of pubs should be:

The Black Bull, Brown Cow, Bridge, Sams Bar, Saddle, Albert Arms, Bay Horse, Bowling Green, Original Bay Horse (aka Fat Franks/The Flea Pit), The Crown, Queens Head, Toll Bar, and finally back to the Albert for some serious after time.

Then we all crash back at my place and get my plus 2 plugged into my telly.

I went to Turton High in Bromley X, only lived in Horwich 8 years.

It should be at the leisure centre - I can walk it to there.

It will
> only be compatible with old amiga apps through emulation. The OS will be
completely

Are you saying that if a new ST was released it would have to be 100%
backward compatable with the old eighties designed hardware ?.
Emulation is a great solution for backwards compatability.

> new and based on a outside developed kernal like BeOS, or Mach. This you
can already

The kernal will "borrow" parts from other OS's, a lot of the features of
workbench will be retained and enhanced further.

> be done under Linux. It will not include a Motorola CPU, it's probably
going to use
> intels comming Merced chip, or something else shitty. The "new" amiga
which will be

Definately not Merced or anything Intel.

> like a bridge to the new platform which will be released later this year
will be
> based
> on the Pentium, so it's clear that they will go for the x86/intel line
like everyone
> else. Don't forget that Gateway has only made intel boxes and never even
seen a PPC.

Gateway wouldn't pay $40 mill for a virtually dead platform with only a
small user base and then spend money on redevelopment to sell rebadged

PC's. Who'd buy them ?, Amigans certailny wouldn't and neither would Joe Blow.

>
> Basicly it's a completely new computer and OS with the Amiga name on it. It's like
> buying a PC whith the Commodore sign on it. It has got nothing at all to do with
> Commodore.

It's for real dude, and it's an Amiga and it's not a PC.
I can't see a PC being 5-10X faster then the current PII by end 1999.

Besides, what the hell is the problem with having another alternative to Intel ?.

Sour grapes ?
:-)

Regards,

Clockmeister.

The Alpha 21264 is, esp. on the floatingpoint part. Integer
specs are a bit less. And this processor is shiping now. It's
not some magical vapor ware like Intel Merced or a 'quantum
processor' to be released in 1999. It is simply the fastest
processor available.

Bye, Hans

And it's not a Amiga.

> I can't see a PC being 5-10X faster then the current PII by end 1999.

5-10x times faster than what? A sluggish 266MHz P2, or a 400MHz? I wonder
how they define "todays PCs"?

And which is this mysterious CPU?

> Besides, what the hell is the problem with having another alternative to
> Intel ?.

Nothing! Did you say that?

> Sour grapes ?

For what? I think you have missed something obvious and the funny thing is that
you doesn't even know it.

The current Alpha (available since last year) is 4-7 times as fast
as a P2. Next one out next year will be between 8-15 times as fast.

Years ago I had a program called Hacker's Treasure Chest. (Also called Pirate's Treasure Chest.) It was from Gardner Computing which was located somewhere in NY, and it came with a large printout of copy-protection schemes and related items.

Does anyone know how I could get ahold of it again? I have no idea who has the rights.

thanks....

pete

This person must be totally out of touch with what is going on in the real world. Atari equipment it totally out of date, out of stock and anyone can find it available anywhere on the net or in a Thrift Store for much less.

I sell for less on all items mentioned and will guarantee them for 30 days or longer in some instances. Mail Problems delivering or you just got a Lemon, like mentioned in some car dealerships. (almost blew it put a car mfg. name in there!)...hahaha Sorry Terry get up to date either drop your price or sit on it for another 5 years.

Atair 800XL's Lower price $20.00 shipped comes with Power Supply and Video cable.

Atari 400 computer 16k, power supply and basic cart $15.00 shipped

Atari 130XE video cable power supply $35.00 shipped.

Atari 1200XL Video cable power supply and basic Cart shipping inc $25.00

Atari Antiques..

As A TOTAL JOKE!

300baud acoustical Modem $150.00 guarantee 2n day shipping!

Supra Hard Drive Interface board guaranteed not to work as received from Supra Corp. with the buy out of the Atari 8-Bit Interface they produced and sent to me as product! $75.00 yes I will pay second day shipping!

Atari 400 computer upgraded to 48k, with a nice Metal Keyboard installed guaranteed to work for however $125.00 shipping will negociate.hahaha

get the point? Get real..I do have these items and the post was in protest!..I will accept lower offers, understand ability. If you want an Item not listed in my post e_mail me, I will locate it at a reasonable price if I already do not have it stored somewhere.

Source record: 61692

Any dos that will work on the Atari 8-bit system will work on the 1200XL
Dos 1.0, not recomended if you have it.
Dos 2.5
Smart Dos
Sparta Dos 1.0 through 3.3a/c if you have it.
Dos Xl
just about any dos that will run on any 400 computer through the 130XE
but the Sparta higher versions require 64k or above which you have.

In other words if you can boot the dos you can run it, simple enough?

Source record: 61693

The 1027 printer produced by Atari was the Worst Printer made. It only did Text files, no Graphics ect. You had to feed it a sheet at a time and it was slow. Now when it came to Atari Support, and Repair, the documentation I have states, when it fails replace the Mechanism. So what does that tell you about the printer? A small Boat Anchor you got it a 1025 printer beats it all to heck..and any direcet conect Graphics printer beats it by speed and repair costs. Junk it Atari Did.

An Seikosha AT100(AXIOM) printer can replace it for $25.00 shipped direconnect and auto form feed.

An Atari 5200 power supply will also drive the Indus Disk Drive. As to hooking a Atari 9v AC drive to an Indus, some will blow the Diaodes and some will not, don't count it out until you have tried a DC power supply on it, if it doesn't come up right away turn it off and replace both 7812 in the back of the board, unless you have a way to check see which is blown.

I want to use the resident printer handler to control the arm on my Atari-Bot. The thing will be controlled by a 68HC11 on a botboard if I can figure out how to get it to do the serial stuff. Maybe there's a better way but I've used up the joystick ports already. If I do this then I could lprint from basic or write "programs" with a word processor and print them to run it. I also just like the idea of developing new Sio hardware. I found a section in the O/S manual that says the data frame can be 41 or 30 bytes long depending on the printer mode. I also know about the timing requirements so unless there are any other complications I'm going to try it.

788. TAF MonSTEr Flea market July 11th - Update!

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-04 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <359d8b17.0@diana.idirect.com>
Source record: 61700

SATURDAY, JULY 11TH, 1998 is the date for the Toronto
Atari Federation FLEA MARKET! The doors open to the
public at 1:00 PM and will remain open until 5:00 PM.

This may be your 'last chance' to come to a bazaar of
Atari related pre-owned hardware and software where
you may find that peripheral, application or utility
for your ST/Mega/TT/Falcon 16/32-bit computer system
or your XL/XE 8-bit classic computer system.

Not only is this an opportunity to buy or sell hard- ware and software
for TAF members and other Atarians, this will also be an event whereby
you can learn what you can still do with an Atari, including the
Internet, Desktop Publishing, Scanning OCR, MIDI, and much, much, more!
There is a confirmed Internet Demo by Dan Dreibelbis (using the suite of
available Internet prgs. running under STiNG), Howard Carson of MGI will
be showing Calamus SL-98, Martin Neuland will do a demo of Logic 2.5,
and Darek Michoka of Emulators Inc. will be offering his latest version
of his GEMulator Atari emulation program for the PC .

If you have original software or hardware that you no
longer have any use for, get yourself a half-table and
try to sell it! Or find that treasure that you have
always wanted. Great deals should be in abundance.

We are anticipating a good turnout and hoping to have
some dealers at this event and thus TAF has booked a
larger hall to accomadate everyone. To help defray some
of TAF's costs of the event, the following will apply:

Half-Table's will be $5.00 or the Full-Table for $10.00
each. Half-Table's are FREE to TAF MEMBERS. Admision
is $2.00 per non-member family but if you are selling
and have taken a half-table or more, admission is inc-
luded. Admission for TAF members is, of course, Free.

The Flea Market will run from 1:00 PM to 5:00 PM, with
setup commencing for sellors after 12:00 PM, noon, and
teardown after 5:00 PM. This should allow enough time
for as many people inside and outside Toronto to attend
the event.

As usual, piracy cannot and will not be condoned. You
must be selling original pre-owned software only. If
anyone is caught selling pirated software or stolen
hardware, they will be dealt with severely!!

The TORONTO ATARI FEDERATION Flea Market will be held in the "Gold Room" of the North York Memorial Community Hall on the Lower or Concourse Level of the North York City Centre Library Building at 5110 Yonge Street (next to Mel Lastman Square) at Parkhome Ave. Parkhome is 5 stoplights North of Hwy 401 running East off of Yonge.

Parking garage inside the complex - enter next to the Novotel Hotel on Parkhome Ave. Those comming by public transport can take the TTC's Yonge Subway, North to the North York City Centre Station, then walk through the tunnel into the concourse, down to the food court, turn left and find the Memorial Hall on your right.

Saturday, July 11, 1998, 1pm - 5pm for the TAF "Flea Market. To contact TAF on booking a table or tables:

TAF Voice Telephone Answering Device - (416) 425-5357

Rare, and probably becoming rarer. I have a Mitsubishi
Diamond Scan AUM 1381A which has SVGA, TTL, and
Composite inputs. I bought it about 1991, I think. If you are
interested, try the Mitsubishi Medical Products Division. Last
info I had they were the part of Mitsubishi that sold this type
of equipment. Sony used to make a model with multiple inputs.
I have my PC and 8-bit hooked up to this monitor. One of these
days I'll do the Bob Woolley TTL-40 mod and have a really
good looking 40 column green-screen display.
CMD (C64) vendor/publisher still has cables last time I
checked. They are on the net at http://www.cmdweb.com

Large (>21") "multimedia" or "presentation" monitors still have multiple inputs. They are hideously expensive though, and tend to be limited in the SVGA modes they can display. They usually have every input you can possibly imagine, SVGA, BNC jacks for each RGB component, s-video, RCA composite jacks, etc. If you can find an older one cheap (surplus) go for it.

From: "Rick C." <seppie@anv.net>
Message-ID: <359DFA14.3EE8@anv.net>
Source record: 61706

hello. I've had an Atari for close to 15 years now. Since i got a PC, i pretty much ignored my Atari. Friday night i set it up, and realized that my hard drive system was messed up. I use an MIO, an Adaptec 4000 controller, and two seagate 20 megabyte hard drives. Both the hard drives are thrashed as far as data goes. I can't retrieve any data. I used to have a file called "HDRECVR.COM" on disk that would fix a botched hard drive. I have over 200 floppies and would hate to go through each one of them.

Does anyone have this file, or a file that is similiar that would repair a erroneous hard drive? I'd appreciate any help!

thanks

Rick

And what will they die from? I guess you have not been keeping up with the
happenings in Cupertino lately.. With the imac on the verge of being released
and continued high G3 sales moving forward, what more could you want?

They did a great job on the first *FEW* episodes of B5, but they went to more
powerful equipment later. Also, it was an Amiga coupled with the Video
Toaster, not just an Amiga alone.

Are you sure that the problem is in the monitor and not the XE? If it's
the monitor you might want to look for another one. If it's the XE it might
just need a new power supply.

----
well, you haven't told me what you want to do... but, I'll detail the
installation of a 128K EPROM in the existing U13 socket.

remove both U12 and U13
if not already present, put a 28 pin socket in U13
remove jumpers W6, W7, W8, and W9
add jumpers to W11, W12 and W13
solder a wire from the TOP of W6 to pin 23 of the CPU (U21)
plug a 600XL/800XL PAL into U14
plug an 800XL (or other 16K OS) ROM into U13

done - you have pretty much an 800XL system.

one problem is the BASIC setup - the OS will enable BASIC halfway unless
you hold down OPTION key during boot.

there are lots of other configurations.... and bigger ROMs.

Bob

804. To Trade: ST stuff for 8bit

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-05 00:00:00 UTC
From: Embedded MicroSystems <Arudzki@m3.sprynet.com>
Message-ID: <35A044AF.3485@m3.sprynet.com>
Source record: 61716

I have an Atari Mega 2 (with 4 meg installed) , ATSPEED (16MHz)
installed and switchable, and a monochrome monitor, that I want to trade
for some 8 bit stuff.

I would like to get a complete 8-bit system perferably with a 3.5"
modified XF551 drive. If not, then a double density drive.

My ideal trade would be someone with a bunch of 8-bit stuff they want to
get rid of, and could use an ST system more than the 8-bit.

Thanks.

Patrick,
Your best bet, if you are trying to do serial (RS232) is to get
yourself an 850 or P:R: Connection type interface box. These provide
real RS232 and parallel printer ports. They are reasonablely inexpensive
too. I hace an interface you can hace for $10.00 + s&h. e-mail me if you
are interested.

You can't use menu.atr to load alley cat off the megaimage, you have
to boot mydos 4.5 at d1: and then load it manually. It works fine
that way.

There are several very good German or Polish drawing programs at
ftp://matrix.ibb.waw.pl/pub/a8/
They are major improvements over all the old stuff.
You can also port PC bitmap graphics to HIP format (160*200 in 30 shades) using
bmp2hip.exe, draw in interlace mode...
Check them out, as well as all the Polish demos (some tell you which programs
have been used)...

I completely agree with you. The 1027 was excellent for printing out term papers, etc. (I got many good comments from teachers about how my papers looked). However, in my experience, my 1027 required way too much hand-holding to keep it in alignment as it printed. There were several nights that still haunt me when I had to stay up long past my bedtime because I had to keep reprinting pages that kept screwing up. For me, personally, speed was a big issue, especially when combined with the aggrevation of having to reprint botched pages. But yes, it printed documents very attractively, and business-like -- when it worked.

The real issue as originally posted was whether or not the 1027 was worth buying *today*. IMHO, that's a definite NO, and I think Bob Klaas would agree with me.

Hey Rich, I don't know if I've told you this in any other posts or e-mail, but I got my keyboard working with the NumLock ON, by toggling it off and then back on again. It's a Hewlett-Packard Win95-keys keyboard, and if others have keyboards with the Win95 special keys, you might want to try it out.

Best of luck!

It's there, just add /index4.htm to the end of the address. On the other hand, don't bother. The site's all fluff and no content. Everything that's there you can find elsewhere, and it's so slow that anyone who knows how to ftp to another site will stay clear of this one anyway. I personally think he's really trying to get everyone to use his adult links so he can make some extra money, or something like that. The Atari links are buried deep enough to make them hard to find the first time around, and yet he continually posts the address here with a new catch-phrase almost every day. But the adult link is right on the main page. Makes you think...

It's not a bad site to look at, it just doesn't add anything new to the on-line Atari experience.

>
> I'd love a DEC Alpha machine -- all I need is to see NT have better game support, along with hardware support for > Voodoo2. Maybe a Matrox MGA-G200? :>

They used Photorealistic RenderMan from Pixar. This is a quite
expensive aplication, only used for rendering. The RIB data
(RenderMan Interface Bytestream) was generated by an
export function of 3D-Software Softimage.

A even better renderer is freely available for Linux, the Blue
Moon Rendering Tools (BMRT) of Larry Gritz. This software is a
combination of a raytracing and radiosity renderer.

As 3D modeling tools you can use Amapi 2.11, SCED, Leo3D or
AC3D. For correctly moving physical bodies you could use
Xaero.

And ofcourse you have good old POV ray, whici can be a very
fast renderer when you are yousing a Beowulf configuration.

I am quite sure this list wasn't complete.
So there are some 3D tools available for Linux.

(No I am not a 3D software specialist. I am just a reader
of the excelent German magazin C't (Computer Technik), they
have a very good coverage of Linux items.)

816. Parallel port transfers?

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-06 00:00:00 UTC
From: kathystest@aol.com
Message-ID: <1998070619550600.PAA13162@ladder03.news.aol.com>
Source record: 61596

Is there a program that will let me connect my Atari to my PC through the parallel port rather than having to make an SIO cable? I have a Xetec parallel port controller that I use to print from on my Atari. I would like to take some of my games over to my PC.
Thanks.

Yes indeed he mentions how to run com and exe files, but what is the process
for getting .bin files to work? Is there some method of converting them to
atr's?

Best, Alan

Yes I tried using the keypad in the Internet Explorer with the numlock off,
and it scrolled using 9 and 3. It's a Fujitsu Windows 95-style keyboard,
it's consumed some coke but I don't think that's the issue here.

> that way.
>
> yogi

That works. I also received email help that you can run it from SpartaDOS. I never used SpartaDOS, "back in the day," although I remember that we had to use three different booting programs in order to run everything. MenuJoe took up no space and loaded 95% of everything. I forget what was second, but it loaded 75% of the rest. Finally there was some dos loader that would load MULE and a handful of other things.

I had not encountered that problem so far in going through the games I wanted to play emulated. I did break down the megaimages (tossed a lot of the junk) into things that would load on an XL with menu.atr, and then an 800 with menu.atr, then through DOS 2.5. I guess I should have tried MyDOS, although I didn't realize it was that different (like SpartaDOS.)

Anyway, enough rambling. Thanks to Yogi and Rich and others, I can now play all the old Atari games I ever wanted to play. It's great! Thanks guys!

Thanks. Part of the SpartaDOS X manual was written when I got it, and part
was lifted from the Construction Set manual. I did test write and test
every programming example, though. I tried to make it a complete reference,
not just a basic instruction manual.

Don't ask me questions about it, though. That was almost ten years ago!

The 1025 printer is a dot matrics Tank from Atari. Have one I have used for over 10years to print out inventory. The ribbon on this computer can be used with any typewriter ribbon. Just unroll it to the 2 spools you have in the 1025, or re-ink the original ribbon.

Another good direct connect printer is a Seikosha AT100 printer tractor feed, which I have one collectin dust..$25.00 shipped.

Ok lets start by process of elimination.

Does the screen come up when you turn on the computer?

If so what appears? Small line in the center of the screen from left to right? Or a total black screen.

If it is a small line from left to right, then the problem is the power supply.

If not then it is one or more of the Rams.

What is APE?

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE 800XE XE Game System

Here is a very condensed history of Atari, centered around their 8-bit computers.

1972
Atari Inc. is formed by Nolan Bushnell, incorporated on Tuesday, June 27. Atari created the first coin-operated arcade video game with the introduction of Pong. The video game industry was launched and has shaped pop culture ever since.

1976
Warner Communications acquires Atari Inc.

1977
Atari launches the Video Computer System (VCS), later known as the 2600, giving birth to home video game systems.

1978
In December, Atari announces the Atari 400 and 800 personal computers, using the 6502 microprocessor. The Atari 800 was code-named "Colleen"; the 400, "Candy."

The following are most of the team who originally designed the 400/800.
Credit for providing this information for the FAQ goes to:
Doug Neubauer (by way of James Finnegan, mailto:finneganj@delphi.com)
Jerry Jessop, mailto:jjessop@ix3.ix.netcom.com
Scott Emmons, mailto:scotte@center.uscs.com

VLSI HARDWARE:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators - Partner in "Cyan Engineering"
Lawrence D. Emmons - Also one of the creators - Partner in "Cyan Engineering"
Joe Decuir - ANTIC and system and creator
???A French guy - ANTIC logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - POKEY logic design
Mark Shieu - POKEY chip design
Steve Stone - POKEY layout design
Steve Smith - Technician for ANTIC and GTIA

Delwin Pearson - Technician for POKEY

OS PROGRAMMERS:
Larry Kaplan
David Crane
Bob Whitehead
Al Miller

1979
The Atari 400 and Atari 800 Home Computers debut at the Winter Consumer Electronics Show (CES) in early January.

Jerry Jessop, mailto:jjessop1@home.com writes:
"The first official small shipment of the 400/800 was on August 29th 1979. These were hand built pilot run units to Sears that needed to be in stock by Sept. 1 so they could be placed in the big fall catalog. The units were placed in the Sears warehouse and then immediatly returned to Atari after the "in stock" requirment had been meet.

The first "real" consumer units were shipped in Nov. of 79 and were 400's to Sears followed very shortly by 800's."

These MOS Technology 6502-based systems run at a clock speed of 1.79 MHz, offering 128 colors displayable simultaneously, up to 320x192 graphics resolution and up to 40x24 text resolution in 8 graphics modes and 6 text modes. Video may be displayed either on a composite video monitor in the case of the 800, or on a standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM, but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

The 800 can be fitted with 1-3 of the following two RAM modules:
CX852 8K RAM module, CX853 16K RAM module
and must be fitted with a ROM module:
CX801 10K ROM, CX801-P 10K ROM for PAL machines

1981
November: 400/800's begin shipping with the new GTIA chip in place of CTIA, increasing the palette of simultaneously displayable colors to 256 and adding 3 new graphics modes. CTIA is totally phased out by the end of the year.

Jerry Jessop, mailto:jjessop1@home.com adds:
"The very first proto systems did have the GTIA, but it had some problems and was not released in the consumer version until 1981. The GTIA was completed before the CTIA."

1982
The introduction of the 1200XL in late 1982 marks the single largest advance

in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

1983
In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Buss Interface (PBI), providing direct memory access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

The 600XL can be expanded from 16K to 64K with the 1064 Atari Memory Module.

1984
Warner Communications sells Consumer Electronics and Home Computer divisions of Atari Inc. to Tramiel Technologies on Monday, July 2.

Atari Corporation is formed by Tramiel Technologies and its products marketed under the Atari brand.

(
Atari Games Corporation is also formed from the former coin-op division and markets coin-op games under the Atari Games brand.

Today Atari Games is an indirect, wholly-owned subsidiary of the Midway Games division of WMS Industries.

Atari Games Corp.: http://www.atarigames.com/
Midway Games, Inc.: http://www.midway.com/
WMS Industries, Inc.: http://www.wms.com/
)

1985
The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus the FREDDY chip, supporting the unique (but rarely used) ability for the 6502C and the ANTIC to independently access RAM banks. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface (ECI), continuing the powerful feature of direct memory access. European 65XE's include the ECI port.

1987
In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system.

It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE.

The 800XE, a 130XE with just 64K, was released at some point in eastern Europe. [WHEN???]

1992
Atari officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

1996
On July 31, 1996, Atari Corp. became a JTS subsidiary. JTS Corp., with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer markets.

1998
On February 23, 1998, JTS sold its Atari Division to HIACXI Corp., a wholly-owned subsidiary of Hasbro Interactive, Inc., which is a subsidiary of Hasbro, Inc., for $5 million in cash.

Hasbro Interactive, Inc. is a leading all-family interactive games publisher, formed in 1995 to bring to life on the computer the deep library of toy and board games of parent company, Hasbro, Inc. (AMEX:HAS). Hasbro Interactive has expanded its charter to include original and licensed games for the PC, the Sony PlayStation(tm) and for multi-player gaming over the Internet. Headquartered in Beverly, Massachusetts, Hasbro Interactive has offices in the U.K., France, Germany, Japan and Canada.

Subject: 1.2) What can I do with an 8-bit Atari?

What can you do with an 8-bit Atari computer system? Virtually anything you can do with any other type of computer!

Programming? Pascal, C, BASIC, Logo, Pilot, Forth, Lisp, 6502 assembler... Plus powerful unique languages like Action! and QUICK...

Word Processing? Try AtariWriter, Letter Perfect, Paperclip, TextPro, Bank Street Writer, 1st EXLent, TurboWord, Cut & Paste, Letter Wizard, Panther, Superscript...

Database? Try TurboBase, TurboFile, Synfile, Data Perfect, MicroFiler, MegaFiler, Homebase, Super Data Base 1-2-3, Small Business System...

Speadsheet? Look at Syncalc, Visicalc, TurboBase, Calc Magic, Turbo-Calc, SAM Budget...

Communications? There's Express!, BobTerm, Kermit-65, Omnicom, VT850, Chameleon, Ice-T, FlickerTerm 80, Term80...

Graphics? Print Shop, Newsroom, Blazing Paddles, Video Title Shop, Virtuoso, Movie Maker, News Station, Publishing Pro, Awardware, Page Designer, ChromaCAD, Rambrandt...

Music? Virtuoso, Music Studio, Music Construction Set, Songwriter, Electronic Drummer, Music Painter, Music Composer, AtariMusic, MIDI-Track, Digital Music System, Chaos Music Composer...

Alternate Operating Systems? There's the Diamond Graphic Operating System; SpartaDOS X, the 64K DOS on a "supercartridge"; the S.A.M. (Screen Aided Management) 80 column Desktop System; the Ultra Speed Plus OS; the TurBoss! High Speed O/S...

Hardware? A plethora of upgrades and add-ons are available, realizing improvements in speed, memory, sound, graphics, storage media...you name it!

Education? Colorful graphics, exciting sounds and full-screen editing give rise to hundreds of quality educational software titles.

Entertainment? The 8-bit Atari has long been famous for thousands of great games.

If you want to do something with a computer, chances are you can do it on an 8-bit Atari computer. While slower than today's PC's, the 8-bit Atari is far less costly than any of these, is easier to program at the machine level or alter at the hardware level, and has been documented more thoroughly than any of the newer computing platforms. The relative simplicity in design of the 8-bit Atari also means that many people find the systems more reliable than their modern counterparts.

The software for the 8-bit Atari is sometimes more powerful than on any other platform. For example, some Bulliten Board Systems are still run on 8-bit Ataris specifically because the BBS software available can be better than that for any other type of computer. There is a reason for the relative quality of software on the 8-bit Atari. People program commercially for the latest PC's to make money; people program the 8-bit Atari because they want to -- they enjoy producing good software. It takes a team of specialized programmers to develop a major piece of software for those other systems; with the 8-bit Atari, a single person has the chance to learn the entire system, thereby developing greater pride in his programming abilities and his final product. The character of the programmer can shine through.

The 8-bit Atari owner can take pride that his/her computer platform was developed years before the IBM PC or Apple Macintosh were even on the drawing boards, but remains as useful today as it was in 1979.

For these reasons and more, the 8-bit Atari remains a popular alternative in today's home computer marketplace.

Subject: 1.3) What are the some of the performance features of the 8-bit Atari?

Some of this text by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick).

CLOCK SPEED:
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

SCREEN REFRESH RATE:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines

ANTIC AND THE DISPLAY LIST:
ANTIC CIO/BASIC Display Resolution Number of
Mode # Graphics # Type (full screen) Colors
---
2 0 Char 40 x 24 1 *
3 - Char 40 x 19 1 *
4 12 ++ Char 40 x 24 5
5 13 ++ Char 40 x 12 5
6 1 Char 20 x 24 5
7 2 Char 20 x 12 5
8 3 Map 40 x 24 4
9 4 Map 80 x 48 2
A 5 Map 80 x 48 4
B 6 Map 160 x 96 2
C 14 ++ Map 160 x 192 2
D 7 Map 160 x 96 4
E 15 ++ Map 160 x 192 4
F 8 Map 320 x 192 1 *
F 9 + Map 80 x 192 1 **
F 10 + Map 80 x 192 9
F 11 + Map 80 x 192 16 ***
* 1 Hue; 2 Luminances
** 1 Hue; 16 Luminances
*** 16 Hues; 1 Luminance
+ require the GTIA chip. 1979-1981 400/800's shipped with CTIA
++ Not available via the BASIC GRAPHICS command in 400/800's.

GRAPHICS INDIRECTION (COLOR REGISTERS AND CHARACTER SETS):
Nine color registers are available. Each color register holds any of 16
luminances x 16 hues = 256 colors. (Four registers are for player-missile
graphics.

Character sets of 128 8x8 characters, each with a normal and an inverse video
incarnation, are totally redefinable.

PLAYER-MISSLE GRAPHICS:
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

DISPLAY LIST INTERRUPTS (DLI's):
Screen modes can be mixed (by lines) down the screen using the Display

List - a program which is executed by the ANTIC graphics chip every
screen refresh:

All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via DLI's.

SCROLLING:
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.

SOUND:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.

A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

Subject: 1.4) What is the internal layout of the 8-bit Atari?

The following four paragraphs were written by Chris Crawford and appear in De
Re Atari (Atari#APX-90008), a book published and copyright by Atari, Inc.,
1981-1982. The text been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different
from other systems. It of course has a microprocessor (a 6502), RAM,
ROM, and a (PIA). However, it also has three special-purpose (LSI) chips
known as ANTIC, GTIA, and POKEY. These chips were designed by Atari
engineers primarily to take much of the burden of housekeeping off of the
6502, thereby freeing the 6502 to concentrate on computations. While
they were at it, they designed a great deal of power into these chips.
Each of these chips is almost as big (in terms of silicon area) as a
6502, so the three of them together provide a tremendous amount of
power. Mastering the Atari 8-bit computers is primarily a matter of
mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor
dedicated to the television display. It is a true microprocessor; it has an
instruction set, a program (called the display list), and data. The display
list and the display data are written into RAM by the 6502. ANTIC retrieves
this information from RAM using direct memory access (DMA). It processes the
higher level instructions in the display list and translates these instructions
into a real-time stream of simple instructions to GTIA.

CTIA ("Color Television Interface Adapter") / GTIA ("George's Television
Interface Adapter") is a television interface chip. ANTIC directly controls
most of GTIA's operations, but the 6502 can be programmed to intercede and

control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missle graphics, and collision detection.

POKEY (means "POT and KEY" as in the paddles and keyboard) is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

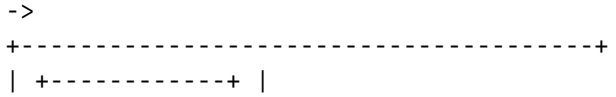
All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

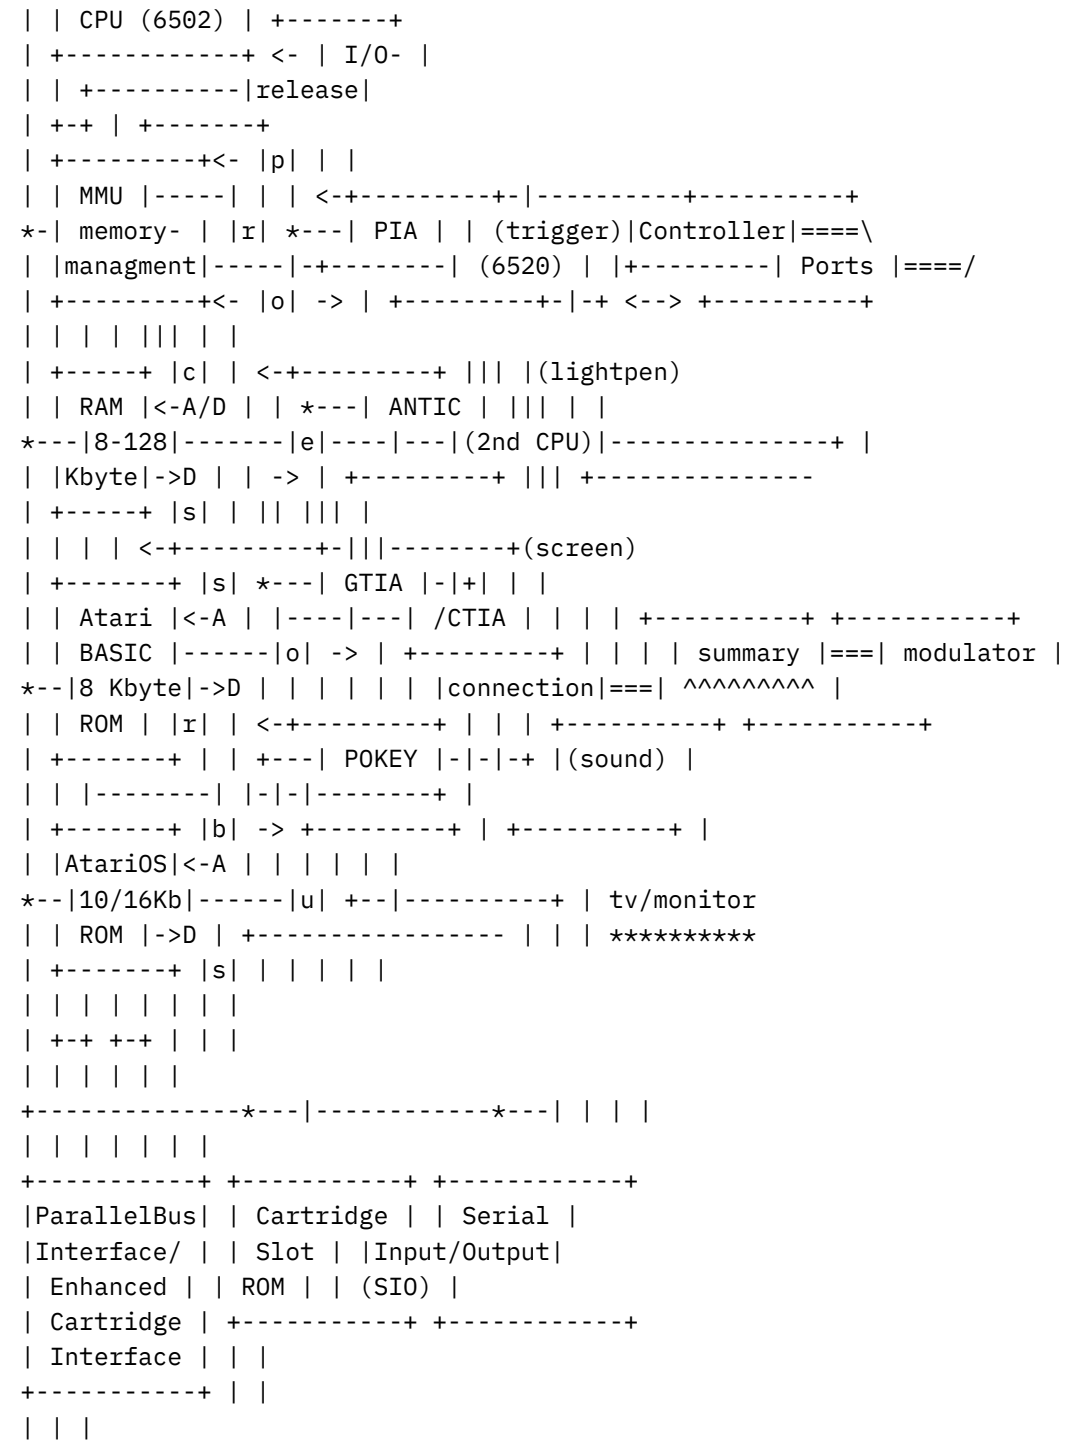
While the 400/800 models contain a generic 6502 CPU, all of the XL/XE models contain Atari's customized 6502C chip. Manuel I. Gloria, Jr., mailto:mani@pworld.net.ph writes:

The difference goes something like this: On the Atari, there are two microprocessors, ANTIC and the 6502 or 6502c. To allow them to coexist, ANTIC must shut off the 6502/6502c, a process called DMA. The 6502 supports DMA, but in Atari's implementation, it required 4 chips. The 6502c has this additional circuitry built-in.

The 130XE and XEGS contain a small additional LSI called FREDDY, a RAM address multiplexer. According to mailto:sup8pdct@mail.cth.com.au (James Bradford), "FREDDY is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. FREDDY also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a FREDDY but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from FREDDY, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to FREDDY for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say FREDDY does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO FREDDY) and an extra 8 RAM chips."

Hardware Arrangement (With thanks to mailto:peter@soemtron.handshake.de (Thomas Havemeister))





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800: 8K, 16K or 48K standard
600XL:16K standard
1200XL/800XL/65XE/800XE/XEGS: 64K standard
130XE:128K standard

* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

Subject: 1.5) How did Atari get it's name?

Graham Thornton, mailto:dangermouse@prodigy.nospam.net types:

This article was published in "I/O - The Magazine of the Atari Home Computer Club" in issue 3 - Summer 1983. The magazine was the official mouthpiece of Atari UK. The article was not attributed to any one person. The words are thiers, not mine.

How Atari Got It's Name

The name Atari actually comes from Japan. And yet the company is most definitely American. Every wondered why? It's an interesting story and one well worth telling.

In 1972 three friends decided to invent and market the first commercially feasible video game. They were Nolan Bushnell, Ted Dabney and Larry Bryan.

To become a partner each man had to submit $100 to the project - a remarkably small sum when you consider the company's success! The next step was to find a name.

Drinking beer and thumbing through the dictionary one day, the three friends came across an interesting entry under "S". The word was Syzygy, or "the straight-line configuration between three celestial bodies". What a perfect name they thought, for three such astronomically talented people!

Now they could get on with the business of inventing games. Their first, Computer Space, was produced and all seemed to be going well.

But then things started to get a little shaky. Larry Bryan decided not to ante up his $100 and pulled out, leaving Bushnell and Dabney to go it alone.

The set up a shop in Santa Clara, California, and incorporated the business. A little later they invented Pong(r).

Busnell and Dabney applied for the name Syzygy to the Office of the California Secretary of State, which regulates Californian corporations, but were told that they were too late. The name was already taken.

Following unsuccessful attempts to buy the rights to the name from the first Syzygy corporation, which appeared to be inactive, the friends' solicitor pressed them to think up an alternative.

This proved difficult. BD Inc and DB Inc were tested and then rejected in turn: the first bore too close a resemblance to Black & Decker, the second to Dunn and Bradstreet.

Inspiration occurred at last, once again in an informal atmosphere. Bushnell and Dabney were both keen players of Go, a Japanese strategy game, and their best brainstorming always occurred over a good game and a bottle of beer.

This time, they decided to make a list of several Go words to see if one of them would fly as the new corporate name.

First choice was "Sente", which means "the upper hand" - something that greatly appealed. Second and third choices were "Atari", which has a similar meaning to the English word "check", and "Hanne", an acknowledgement of an over-taking move.

Busnell and Dabney submitted the list once again to the Office of the Californian Secretary of State, which approved "Atari". The rest is history.

When the company name changed, Bushnell and Dabney decided to update the logo too. They incorporated the "S" from Syzygy and the "A" from Atari into the new design, and if you look at the middle logo [MLOGO2.BMP], you will be able to make out both letters.

It was not until later, as the company became increasingly successful, that an advertising agency designed the slicker and now famous Atari logo - the "fuji" or stylised "A" design.

Subject: 2.1) What is comp.sys.atari.8bit?

news:comp.sys.atari.8bit is the unmoderated Usenet newsgroup for discussion about the Atari 8-bit family of computers, including the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE and the XE Game System!

comp.sys.atari.8bit was born around 1986-87 when the earlier comp.sys.atari newsgroup was split into comp.sys.atari.8bit and comp.sys.atari.st.

Large binary posts do not belong in unmoderated discussion groups like comp.sys.atari.8bit. If you wish to share PD/freeware/shareware, use alt.binaries.atari and alt.binaries.atari.d or upload the software to the University of Michigan Atari Archive.

To the best of my knowledge, there is no charter for comp.sys.atari.8bit, presumably because the custom of drafting charters for new newsgroups did not exist at that time.

Subject: 2.2) What other Usenet newsgroups cover the 8-bit Atari?

news:comp.sys.atari.advocacy
Attacking and defending Atari computers. Unmoderated.

news:comp.sys.atari.announce
Atari related hard/software announcements. (Moderated). Dead newsgroup?
Moderated by Yat Siu, mailto:lexicor@world.std.com

news:comp.sys.atari.programmer
Programming on the Atari computer. Unmoderated.

news:rec.games.video.classic
Orphan home video game systems. Unmoderated.

news:comp.emulators.misc
Emulating one kind of computer on another. Unmoderated.

news:comp.emulators.announce
Announcements related to computer emulators.
Moderated by Qualcomm, mailto:emulators-request@qualcomm.com

news:alt.binaries.atari
uuencoded software for Atari computers. Unmoderated.

news:alt.binaries.atari.d
Descriptions/discussions on software posted on alt.binaries.atari. Unmoderated.

news:alt.binaries.comp.atari8bit
uuencoded software just for the 8-bit Atari. Not widely available.

Subject: 3.1) What is INFO-ATARI8?

INFO-ATARI8 is an e-mail list for discussion about the Atari 8-bit family of computers.

To subscribe to INFO-ATARI8, send a message to:
mailto:listserv@vm.marist.edu
that says:
subscribe info-atari8

Owner= HARRY@MARIST (A Harry Williams)

comp.sys.atari.8bit postings no longer appear in INFO-ATARI8.

INFO-ATARI8 was created on December 9, 1986.

Subject: 3.3) What is ATARIPL?

From: Wojciech Hartman <harti@waw.pdi.net>
Date: Saturday, March 15, 1997 3:51 AM

I am proud to announce that there is a mailing list "ataripl" for all polish-speaking Atari users and enthusiasts.

To subscribe the lists you have to send an email to
mailto:majordomo@piwo.bl.pg.gda.pl containing a line "subscribe ataripl".

Subject: 3.4) What is ATARI8-L?

atari8-l mailing list

created especially for discussion about ANIX project (unix for atari8),
but any atari 8bit related threads are welcome. english language only.

to subscribe, please mail a message to
mailto:majordomo@zwieracz.pse.pl

containing a line:

subscribe atari8-l <mailing address you'd like to receive the list to>

in the body (not the subject) of your message

there is also mail2news gateway that translates all postings on the
list to easy to read usenet articles, available read-only to everyone at:
news://zwieracz.pse.pl/listserv.atari8-l

if you get any problems, please report to
maciej grzeszczuk, mailto:krap@zwieracz.pse.pl

Subject: 3.5) What is ATARI8PL-L?

any atari 8bit related threads are welcome. Polish language only.

to subscribe, please mail a message to
mailto:majordomo@zwieracz.pse.pl

containing a line:

subscribe atari8pl-l <mailing address you'd like to receive the list to>

in the body (not the subject) of your message

if you get any problems, please report to
maciej grzeszczuk, mailto:krap@zwieracz.pse.pl

Subject: 4.0) What is XL Search?

XL Search is a new and growing search engine created and maintained by
mailto:kendrick@zippy.sonoma.edu (Bill Kendrick), designed to provide much-
improved access to the various PD/freeware/shareware Atari 8-bit software
archives available on the Internet.

XL Search is located at: http://zippy.sonoma.edu/kendrick/nbs/xlsearch/

You can also access XL Search via e-mail! Send mail to:
mailto:kendrick@zippy.sonoma.edu with the subject "xlsearch" for details.

mailto:kendrick@zippy.sonoma.edu (William Kendrick) himself writes:

http://shareware.com/ , c|net's FTP-site search engine, now includes
the Atari 8-bit files at UMich!

Unfortunately, being under the previously-existing "Atari" category,
the files are now pretty mixed in with the ST stuff. I've talked to them
about fixing that. No reponse yet (they're really slow that way)...

Anyway, so now you can use http://shareware.com/ to find Atari stuff..
just be careful what directory you pull it out of! :)

Remember, you can ALSO use MY MINI VERSION OF SHAREWARE.COM!....

XL Search, the Atari 8-bit FTP site search engine!
If anything, it's much less cluttered than Shareware.com! ;)

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Bill Kendrick, mailto:kendrick@zippy.sonoma.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

Mirror web sites:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
http://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://ftp.toad.net/pub/umich/8bit/
ftp://pmftp.cs.vu.nl/pub/atari8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file and mail it to mailto:kendrick@zippy.sonoma.edu
(Bill Kendrick).

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no
(Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software
Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate directory. Please include a readme file with each upload, so people know what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

A mirror of Kevin Atkinson;s ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only) on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 4.7) What is the Atari 8bit FTP Archive in Slovakia?

This FTP site contains demos, games, utilities, zines and other useful stuff from all the world. Also, you can download big amount of slovak and czech programs for 8bit Atari only from this archive. And finally, because this site is created and supported by slovak computer group GMG, most of our products can be found right here.

If you want to place here your program, just send it to me (with some comment) by e-mail and I will do the rest.

If you have some problems or questions, please contact me at this address:

mailto:mchorvat@econ.umb.sk (Marek Augustin Chorvat)

ftp://svs.scsss.sk/pub/atari

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

Internet access to the Cleveland Free-Net (Cleveland, Ohio, USA):

telnet://freenet-in-a.cwru.edu or
telnet://freenet-in-b.cwru.edu or
telnet://freenet-in-c.cwru.edu

Type "go atari" at any menu.

Contact:
mailto:xx004@cleveland.freenet.edu (Atari SIG)

The Cleveland Free-Net now has a home page:
http://cnswww.cns.cwru.edu/net/easy/fn/

Subject: 5.2) What is the National Capital FreeNet Atari Users SIG?

Internet access to the National Capital FreeNet (Ottawa, Ontario, Canada):

telnet://telnet.ncf.carleton.ca (Type "go atari" at any menu) or
gopher://gopher.ncf.carleton.ca or
http://www.ncf.carleton.ca/

Contact:
mailto:ac382@freenet.carleton.ca (Jack Kitowicz) or
mailto:aa728@freenet.carleton.ca (Blair Dea)

Subject: 5.3) What is the Victoria Telecommunity Network Atari Users SIG?

Internet access to the Victoria Telecommunity Network (Victoria, British
Columbia, Canada):

telnet://freenet.victoria.bc.ca (Type "go atari" at any menu)

Contact:
mailto:ua558@freenet.victoria.bc.ca (Gordon Hooper) or
mailto:ud264@freenet.victoria.bc.ca (Ted Skrecky)

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

Paul Clark offers this tip:

I think Dalnet carries #atari8, do the following;

telnet://telnet.dal.net

At the login prompt, type;

dalnet

If prompted for a password, just hit enter. You should
be able to navigate to #atari8 from there.......

==> #rgvc - Classic Games and Systems Collectors. "Rec.Games.Video.Classic"

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, and .XFD file formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Disk Communicator format. Invented by Bob Puff,
mailto:76702.1076@compuserve.com for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.

ATR - Atari disk image format. Invented by Nick Kennedy,
mailto:nkennedy@cswnet.com for his SIO2PC project.
Used when working with non-Atari hardware.

XFD - Xformer disk image format. Invented by Emulators Inc,
mailto:emulators@msn.com for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used when working with non-Atari hardware.

PRO - APE ProSystem format. Invented by Steven Tucker,
mailto:classics@nacs.net for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text, but was a binary file. As a binary file, it had to be downloaded using a file transfer protocol such as XMODEM. The use of ".xmo" as a filename extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load files. Like .xmo, use of .bin is discouraged.

Subject: 9.5) How can I make my commercial boot disk (tape, cart) into a load file or disk image?

Russ Gilbert, mailto:russg@en.com writes:

The disk image part is a matter of taking a copyable boot disk and making an atr, xfd, dcm or other disk image type file out of it, usually for use with an emulator. Before emulators, the Bob Puff .dcm format was used to store/archive/retrieve boot disk images.

Almost all commercial software for the A8 is/was copy protected. For boot disks, this usually involved a large number of special formatting that couldn't be copied using ordinary sector copiers. Usually the boot process involved checking to see if a certain sector error occurred, then proceeding. If the error did not occur, the disk was a copy and would not work.

For carts, usually the method of protection was to write to the cart area of memory and see if the value changed. If the value changed, the cart program was in RAM, not ROM and would fail to operate.

For tapes, again a fair number of schemes were used. Some varied the speed at which the tape loaded. I'm not familiar with tape protection schemes.

With all software media (cart, tape, disk), there may be program encryption, which must be decrypted before the program can run. This to make more difficult disassembly of the program.

There were/are a number of products to defeat copy protection/allow copying of protected software for the A8. The most common way to defeat copy protection was to disassemble the software and revise sections of code so that the copy protection was defeated. A software with defeated copy protection is called a 'cracked' software. The basic procedure is to understand how cart/tape/disk software initializes, loads and runs. Usually make a file out of the software and 'follow the code', starting with loading of the program, to decryption to the actual running of the program. Today, it is unnecessary to copy original

commercial A8 software because it has already been defeated and may be found at a few ftp sites. (Note umich archive has no commercial/non-shareware software.)

Besides 'cracking' software, there were/are hardware devices to copy commercial protected software. The Happy 1050 and the Archiver, and probably other modifications to the 810, or 1050 allowed 'bit image' copying and reproduction of the special formatting that copy protected disks had. Using these archiving disk drives, a copy of the original disk, including all special formatting and the original code is copied, thus making a copy protected copy, not cracked, just like the original.

For carts, copying could involve cracking or again there were/are products to reproduce the cart and simulate a ROM. Or the cart might be copied and burned on the correct type of eprom, to make a plug in cart. 'The Impersonator', the 'Pill' are two cart copy schemes copy the cart to a file, then don't change the code, but use a 'dummy cart' to fool the software into thinking there is a ROM present.

Basic tools for copying, then cracking, carts and disks are a sector editor and disassembler. Carts are usually most easily dumped using a special OS, like Omnimon, to interrupt the cart and dump memory to disk. There are a few pd cart copiers that have the user plug the cart in when the program is running, I don't believe these pd cart copiers are very good or very wise to use.

So, the basic answer to 'how do I make a copy of my copy protected commercial software' is don't bother. Find it on the net.

There is one exception, in that this 'solution' involves a minimum of effort and is relatively safe. I refer to 'Chipmunk' and 'Black Patch' software to make cracked boot disk copy of commercial disks. HOWEVER, even if you use these two commercial archival tools, be sure you write protect your originals, and be careful not to accidentally write to the original disk.

Finally, I'll mention a very modern (I mean 1997) product. The APE Pro system, by Steven Tucker, in the registered version of this shareware allows making disk images called 'Pro' images. APE (Atari Peripheral Emulator) requires a cable, called the SIO2PC cable, that connects the A8 13 pin serial port to a serial port on the IBM PC clone. To make 'Pro' images, a special adapter cable is needed, not just the 'standard' SIO2PC cable. The 'Pro' image can 'capture' the copy protection of an original commercial disk. The 'Pro' image can then be loaded into an A8 using the APE

registered version software, thus backing up your original
disk software. Note the 'Pro' image will only be of use to
person(s) owning registered APE software and 'Pro' adapter
cable.

Subject: 9.6) How can I convert my commercial boot tape into a cassette
image file?

mailto:ernest@pi.net (Ernest R. Schreurs) writes:

For those of you that like ALL classic Atari software, there is now a
way to store all software that has been recorded on cassette tapes on
the hard disk of your PC. I have written a program that is similar to
the SIO2PC utility written by Nick Kennedy. But this one is intended
for use with cassette software. You will need the following items:

Any PC equipped with a sound card and about 50 to 100 Megs of free
disk space to work with. The sound card should be able to sample sound
at a sample rate of 44.100 Hz mono. The sample must be recorded into
a .wav file.
You need the wav2cas program to convert the .wav file to a .cas file.
The .cas file is a digital cassette image file that only contains the
data that is on the cassette tape. Once you have that, you can throw
away the .wav file. The .cas files are typically 16 to 64K, so they
are relatively small.

To load cassette files into your Atari (i.e. boot a digital cassette
image) you do not need a sound card. You do need a SIO2PC cable or
similar device. You also need the cas2sio program.

The wav2cas and cas2sio programs should be available from the archives
of Umich by now. They have been put together in one zip file
wav2cas.zip, along with the documentation and the 'C' source code.
You can download it through the web interface at the URL
http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/wav2cas.zip
Note the capital in Emulators and in Peripherals.
Thanks to William Kendrick for helping me get it uploaded there!
You can also try the gopher stuff:
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Emulators/Peripherals/

Steven Tucker, the author of APE, has added support for this file
format as of version 1.15 of APE. It looks real neat, so try that out
too! Thanks to Steven for adding a nice user interface for these
cassette images. He did a nice job. I am hoping other using are
willing to write some programs to get more enjoyment out of this
underrated storage medium.

My stuff is available totally free for personal use, so I hope you
enjoy it. Read the docs about the conditions.

Keep those XL's/XE's humming.
If you have any questions feel free to E-mail me: mailto:ernest@pi.net

---

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal
programs available.

Ice-T XE v2.72 (128K XL/XE) or Ice-T 800 v1.1 (48K)
shareware by Itay Chamiel, mailto:itayc@hotmail.com
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: X/Y/ZMODEM download
Autodial: Yes (2.72) or No (1.1)
Backscroll buffer: Yes--8 screens (2.72) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.72) or No (1.1)
Summary: Outstanding flicker-free high-speed VT100 emulation.Recommended!
http://www.geocities.com/Hollywood/Lot/4205/

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus

BobTerm 1.22, shareware by Bob Puff
(There's also a 1.23 that's specific to PC XFormer)
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; best for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Only option combining VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Only option for VT100 emulation on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of

]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz, mailto:draco@mi.com.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

Jon D. Melbo, mailto:ssilicon@lax.net sums it up this way:
So a basic rule of themb when sharing 360KB floppies among 360KB &
1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that
has been previously written to in a 360KB drive....UNLESS... you only
plan on ever using that disk in the 1.2Mb drive from then on out. Of
course a disk can be reformated in a particular drive any time for use
in that drive. As long as you follow that rule, you can utilize the

backwards compatible 360KB modes that most 1.2MB drives offer.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Apparently 2.07 is buggy.
Anadisk 2.06 is available at: http://ch.twi.tudelft.nl/~sidney/atari/

Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:crow@cs.dartmouth.edu (Preston Crow),
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 11.5), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe
Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to
read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on each computer. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. (Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25-pin port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C port.
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o o
25 14

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 11.5) What is SIO2PC?

Original text by Dave Paterson, mailto:davepat@total.net

SIO2PC is a cable and software combination that lets you use your PC as up
to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to
16 megs. SIO2PC also lets you redirect the printer output to your PC
printer or to a file on the PC. High speed drives are emulated (a la
K-Products
US Doubler).

All these functions are transparent at the Atari end; you never notice the
difference between SIO2PC and regular drives, except that the SIO2PC drives
are faster than any others (except Ramdisks and PBI interface drives).

Several different designs for the SIO2PC hardware are floating around. Best
contact the author for the latest details.

SIO2PC 4.16 is shareware by Nick Kennedy, mailto:nkennedy@cswnet.com

---

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,
chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:

- normal - 19200 bps
- Turbo - 70000 bps
- UltraSpeed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- UltraSpeed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 67000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA2001 "California Access"
SS SD/ED/DD 19200 bps or 38400 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA2002 "California Access"
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: MYDOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps
- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary;
full-compatibel with the SDX)
- UltraSpeed 70000 bps (full-compatible with the older SpartaDOS)
Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the
XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades (CSS)
- Floppy Board (CSS)
- Percom drive upgrades

==> Atari XF351 or XC35
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need to obtain one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Rare.
Fast but still relatively slow I/O, kludge through joystick ports for 800.

==> KPI Hard Disk Drive Interface (formerly Supra)
from K-Products (bobkla19@mail.tcd.net - Bob Klaas)
Some limitations on drive type and size and total number of drives in sys.

==> Multi I/O (MIO) (formerly from ICD)
from Fine Tooned Engineering (FTe) (ftooned@crl.com - Mike Hohman)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Black Box
from Computer Software Services (CSS) (76702.1076@compuserve.com - Bob Puff)
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the
only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface
from Konrad M. Kokoszkiewicz and Jacek Zuk
(see http://www.orient.uw.edu.pl/~conradus/docs/ide_eng.html)
o Maximum drive capacity: 16777215 physical blocks on each device.
o Maximum number of partitions: 16
o Maximum capacity of a partition: 16777215 logical sectors
o Logical sector length: 256 or 512 bytes
o Average speed (in kilobytes per second, WDC 130AB drive):
- Native mode, sequence of sectors (R): 75
- Emulation mode, sequence of sectors (R): 43
- Emulation mode, back sequence (R): 28
- Emulation mode, random sectors (R): 13
- Emulation mode, same sector (R): 29
- Emulation mode, DOS file (W): 7
- Emulation mode, DOS file (R): 36
o Booting from any partition (on the standard XL OS)
o Write protection capability

o 8 jumpers to set the device number for the operating system
o Sweet 16 compatibility

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

==> MSC IDE-Harddisk-Controller
created by Steve Birmanns and Matthias Belitz in Germany
mailto:stefan_birmanns@ac.cybercity.de
mailto:matz@kawo2.rwth-aachen.de
http://www.kawo2.rwth-aachen.de/~matz/atari/
* real device for the parallel-port of the Atari XL-Series
* up to 240 partitions per harddisk supported
* emulates D1: until D9: of disk devices (access to 9 partitions at
one time)
* full bootable from any partition (with standard XL-OS)
* write protectition capability
* supports master/slave configuration
* more than 30 KB/s file access with SPARTA-DOS 3.2 gx (reading)
* more than 10 KB/s file access with SPARTA-DOS 3.2 gx (writing)
* access of ATAPI-CDROM with additional software

Subject: 12.4) What kinds of monitors can I use with my Atari?

In general, you either need a Composite Video monitor, or a standard TV.

Television:
You'll need a video cable (not detachable on the 400/800), and a TV Switch
Box. Used with VHF Channel 2 or 3.

Monitor:
The 8-bit Atari produces a color Composite Video signal, plus
separate chroma (color) and luminance (brightness) signals which the best
composite video monitors can take advantage of. Popular examples of such
monitors include the family of monitors produced by Commodore.

The pinout of the Monitor port is in the pinout section of this FAQ list.

Gotcha's:

-the 400 and North American 600XL lack a monitor port entirely. They can only
be used with a TV.

-the XE Game System provides an RCA-style jack in place of the Monitor port;
so it provides Composite Video but lacks separate chroma\luma signals

-the 600XL, 800XL and 1200XL lack separate chroma signal (can be added via
hardware modification)

-the XEP80 Interface Module produces a monochrome Composite Video signal via
an RCA-style jack. This higher-resolution signal produces crisp, clear 80
column text on 80-column monochrome composite video monitors.

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

"The best monitor for an Atari 8 bit that is readily available today would be a television with an S-video input---these tend to be large and high-quality, so the s-video input is the deciding factor there. You'll have to build the cable yourself, and if you have an XL you'll want to do the Super Video upgrade that Ben Poehland published in Atari Classics a few years ago---this puts the chroma signal back on the pin that it should be and cleans up the video signal enormously. It's really more of a fix than an upgrade.

I use a commodore split-video monitor. They work great and are cheap-to-reasonable when you can find them."

mailto:bryede@emi.net (Bryan Edewaard) writes:

"Yes, the best choices are monitors that support "Separated Video" (sometimes called Commodore video on Commodore monitors), or S-Video. These monitors have separate color and luminance video inputs, which give a sharper picture without cross-color artifacts - such as the colored fringes on text when viewed on a TV (although some games use these artifacts to get additional colors). If you have an XL computer, then it needs an upgrade to support these monitors due to the omission of chroma from the monitor port. the 800 and XE computers don't have this problem.

The 2nd best choice is a TV or monitor that has a "Composite Video" (usually called just "Video" or "Aux") input. This is a signal that has the color and luminance information combined into one signal. The picture will be a little less sharp, but still much better than using the "Channel 3" output.

>Where might I find one?

I've seen them a flea markets, garage sales, swap meets, ham fests, and in newsgroups like this one. Plus, many new TV's support S-Video and Composite video inputs.

>What are the advantages of using one of these rather than a TV?

Well, it's all a matter of how many stages the signal must go through.

1. The Atari generates video as a color signal and a brightness (luminance) signal. These are passed to the monitor port as Chroma and Luma signals (XL's have no Chroma output from the factory).

2. The signals are mixed together to make a standard video signal which is also passed to the monitor port as Composite Video.

3. Then the mixed video signal (along with audio) goes through the process of being "modulated" into a TV radio signal (channel 3 or 4). This step involves removing high frequencies from the video (blurring it) and sending it to the TV in a fragile broadcast form that's suseptable to all kinds of interference. Then the TV must (1) extract the video signal from the radio signal, (2) separate the Chroma and Luma components as best it can, then (3) divide the Chroma in R, G,

and B. Any of these steps that you can eliminate will help your
picture.

>Are there any other composite video monitors that anyone would recommend
>(and where might I find one)?

Maybe the 8-bit FAQ mentions these monitors. The most common one is
probably the Commodore 1702 which has a very good picture and is quite
reliable.

If you plan to use an XL (which I do), upgrading the video circuitry
makes as big a difference as what monitor you choose. Ben Poehland has
some excellent articles in Atari Classics magazines for improving the
quality of the XL's video, as well as restoring the missing Chroma
output."

Jerry Jessop, mailto:jjessop1@home.com explains why French Ataris produce
fewer colors:

"I will tell you why it only has monochrome out, because it's SECAM and a
SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum
outputs are run into an onboard encoder to produce a "psudo" color depending
on the Luminance output, composite only. This is why a SECAM VCS or 800 has
nowhere near the same number of colors (16) availible as a PAL or NTSC unit
(256).

The FGTIA was never completed as the market size did not warrant the expense.
The largest SECAM market is not France but the Soviet Union (former) and in
80-84 sales of these items there were not possible."

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari
users should treat themselves to either MYDOS or SpartaDOS to appreciate the
power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8
drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and
hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles
Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit
sector numbers where possible, known as 4.53/3; the other, known as 4.53/4,
uses 4 digits minimum. Complete documentation about the disk formats and
commands, as well as the source code, is available.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS,
though it is perfectly capable of reading all Atari DOS and MYDOS disks.
SpartaDOS 3.2g and 3.2gx are disk-based; SpartaDOS X 4.22 is cartridge-based
and includes many additional features. SpartaDOS 3.3a and 3.3b were rewritten
by Stephen J. Carden for use with BBS Express PRO!. SpartaDOS 3.3c is
produced on disk or in a 16K ROM cartridge from K-Products.

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2g)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Another popular, powerful DOS is BW-DOS, freeware by Jiri Bernasek.
BW-DOS 1.30 and all other versions are available via:
http://atari.boss.com.pl/files

Any other versions of DOS all 8-bit Atari users should be aware of??

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Home Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Home Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI (Europe: includes ECI)
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missile Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions. 410a - Taiwan version
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 40-Column Printer -
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige & black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
mailto:rrs0059@ibm.net (Frank McKenney) writes:
The printer/plotter mechanism for the Atari 1020 is
(I believe) the same one used in the Tandy/Radio
Shack CGP series and the Commodore 1520(?), and
was
made by a company named ALPS.
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801
1030 Direct Connect Modem -300 baud, with ModemLink software. 2 SIO ports

1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, w/ XE Term software. Permanent SIO cable
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package.
SIO & DB25 RS232 serial ports.external power supply

Atari 8-bit vaporware computers: (note some are more vaporous than others)
800D (Developers Bus System)
600 600XL, all black case
1000 Sweet 16 Project, lower end model. Became the 1200XL
1000-X Sweet 16 Project, higher end model. Became the 1200XL
1200 1200XL internally, many slight cosmetic differences
1200XLS 1200XL Show prototype, top-mounted cartridge slot
800XLF late 800XL with a redesigned motherboard, plus the FREDDY chip
1250XLD Earlier name for the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL 1400XL plus room for 2 internal 5.25" floppy drives
1450XLD 1400XL plus 5.25" floppy drive
1600XL Amiga/Amiga-like????
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE/AMY sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1060 CP/M Add-On Module -Z-80 CPU, 64K RAM, CP/M 2.2 OS, 80 column display
1090 XL Expansion System-5 PBI slots, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XF351 -a 3.5" drive.
XC35 -an XF551 with a 3.5" mechanism
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

Thanks to Matthias Belitz, mailto:matz@kawo2.rwth-aachen.de for the European data in this section. I need more international help!

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have.

The most important information is the voltage (in volts) required, and
whether you need a transformer (AC output) or an adapter (DC output). The
power (in watts) and current (in amperes) specifications of the original
equipment as presented here should be regarded as minimum values.
Higher-than-specified power and current capacities are entirely usable,
and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

N O R T H A M E R I C A: INPUT = 115-120 V AC, 50/60Hz
==========
9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:

6 V DC 300 mA (1.8 W) Atari#??????? adapter:
"410P" (vaporware)
9 V DC 200 mA (1.8 W) adapter:
MPP1000C (the modem from MPP, interfaces via a joystick port)
9 V DC 500 mA (4.5 W) Atari#CO16353/CA014034/CX261 adapter:
XEP80,SX212,2600
9.3 V DC 1.93 A (18 W) Atari#CO18187 adapter:
Indus GT,5200
11.5 V DC 1.95 A (22 W) Atari#CA019141 adapter:
Indus GT,5200
5 V / 12 V DC 1.1 A (5.5 W / 13.2 W) Atari#CO62297/DV1450 adapter:
1400XL,1450XLD

E U R O P E (and elsewhere?) INPUT = 220 V AC, 50 Hz
==========
5 V DC 1,8 A, #CO61763-107: 800XL
5 V DC 1,5 A (7,5 W) #CO61763-34 : 800XL (U.K., 240 V AC in)
5 V DC 1.5 A (7.5 W) #CO61763-11 : 65XE,800XL,800XE

two ones with the same part number, but different cases and different
input Values :#1, 65XE (Poland, made in Taiwan), Input 22 VA
#2, 800XL, Input 26 VA
9 V AC 27 VA (3.0 A) CO60592-34/TM 7498 : 1050 (UK)
9V AC 0,5 A, CO#61516/34 : 1010 (UK)
9,3V AC, 1,66 A CO# (not printed), FW 6799: 800

These draw their power from the SIO +5 V:
XM301 (60 mA),XC12,ICD/FTe P:R:Connection

Draws power from the 600XL PBI:
1064

These have built-in power supplies (plug directly into the wall):
410,815,820,825,1025,1029,XMM801,XDM121

The power supply requirements for the following are still needed:
??? V DC ???? A (???? W) Atari#CA060535 adapter:
835

XC11 program recorder (no brick needed -> internal or SIO source?)

OTHER:
The ICD/FTe Multi I/O (MIO), all versions, can use both AC and DC supplies.
But stick to voltages of at least 6.2-7.2 V.

Subject: 13.5) What BBS software can be used on the Atari?

This section mostly by mailto:winston@merk.com (Winston Smith)

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed
in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM
terminal program of days gone by. I am not familiar with this program. I
think that it is written in Action! and only supports XMODEM Checksum
transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and
comes with a "dial out" screen so that the Sysop can use the BBS as a
terminal program to call and fetch files without having to bring the BBS
down and reload a terminal program. OASIS supports "Door programs" which
it refers to as "OASIS PAL modules". This OASIS demo module comes with an
excellent message system. The OASIS file system is one of the most
complicated that I have ever seen. It consists of "file libraries" with
suites of "file types". There is quite a bit of overhead involved in
performing a download (which may be a good thing, as it discourages file
hogs). There is a commercial version of OASIS called "OASIS IV" that
performs networking. There was an OASIS network between Boston,
Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word
of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank
Walters wrote it.

o Carina BBS -- a shareware product of Shadow Software.

o BBS Express! Professional -- a product of K-Products. See Vendor List.

o OASIS IV -- a product of ???

o Forem-XE Pro -- by Len Spencer. http://members.aol.com/lenspencer/

Subject: 13.6) What versions of Atari BASIC or the CTIA/GTIA chip do I have?

Atari BASIC:

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Freddy Offenga, mailto:offen300@hio.tem.nhl.nl adds:

there's another good answer (IMO):

You can also take a look at the part numbers on the IC's
inside your Atari and compare them with the numbers from
the following table:

Part# Version
~~~~~~~~~~~~~~~~~~~~~ ~~~~~~~~
CO12402 + CO14502 A
CO60302A B
CO24947A C

CTIA or GTIA installed?

In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the
GTIA chip. If it stays blue, you have the old CTIA chip.

By the way, apparently no CTIA-equipped Ataris were shipped to Europe.

Subject: 13.7) Which versions of the Operating System (OS) are there?

This section written by Freddy Offenga, mailto:offen300@hio.tem.nhl.nl

The following Operating Systems exist for the Atari 8-bit:

Rev. System(s) Models Size Part Nr(s)
~~~~~~ ~~~~~~~~~~~ ~~~~~~~~~ ~~~~~~ ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
A NTSC 400/800 10kB CO12499B, CO14599B, 12399B (*)
A PAL 400/800 10kB CO15199, CO15299, CO12399B
B NTSC 400/800 10kB (?)
B PAL 400/800 10kB (?) (*)
1 A NTSC/PAL 1200XL 16kB CO60616A, CO60617A
1 B NTSC/PAL 1200XL 16kB CO60616B, CO60617B (?) (*)
1 NTSC/PAL 600XL 16kB CO62024
2 NTSC/PAL XL/XE 16kB CO61598B
3 NTSC/PAL XE 16kB C300717
4 NTSC/PAL XEGS 16kB C101687

(?) more information or confirmation required

(*) these versions should exist, although I've not seen them.
If you have one (or more?) of these, please contact me.

NOTE:
The 400/800 O.S's consist of three ROMs (two 4kB and one 2kB).

Subject: 13.8) What games support 4 simultaneous players on the 400/800?

mailto:pmulvey@erols.com (Pat Mulvey)
mailto:sposey@ioa.com (Steven E. Posey) (Party Quiz controllers description)

The following games support 4 player head-to-head play. Remember, only the 400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Dandy, M.U.L.E., Maze War, Silicon Warrior, Survivor, Thorn EMI Soccer, Major League Hockey

The following support 8 players on the 400/800 or 4 on the other computer models, using the 2 controllers-per-port CX30 Paddle controllers:

Super Breakout, Worms?

The following supports 4 players on all machines, using special 4-button keypad controllers linked together with RJ-11 jacks (standard phone jacks) to a box with
2 joystick port connectors.

Subject: 13.9) Why should I disconnect the 810/1050 power supply before connecting or disconnecting SIO cables?

Rich Mier writes:

You've been plugging and unplugging the SIO cable with the 1050 power pack plugged in, right? That's a no-no. Most of the time it's Okay, but about 1 in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right, rear of the main board. A 14 pin DIL chip. Actually it is an array of 5 transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be ON on the CPU. The problem has to do with the secondary winding of the Power Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

Subject: 13.10) What is Omnimon?

--This section was written by Scott Charles, mailto:scharles@blast.net

Omnimon is a add in board for the Atari 400/800 series of computers and a replacement OS chip for the xl/xe series of computers. The original Omnimon board fit onto the OS board in the 800 series and had a switch attached to it to disable the board. The 400 series required you to bend the circuit board into a right angle for it to fit inside the 400's case. (It was

designed to do this.). The Xl/Xe version replaces the OS Rom chip inside the computer with one that contains the Omnimon code, and a revised OS to make the XL more compatible (no translator disks needed).

Omnimon itself is a machine language monitor residing from $C000-$CFFF, with a few variations. It was designed in 1981 by David C. Young (who also wrote Cartcopy, a copier for the right slot of the 800) of CDY Consulting in Texas. The first software revision of Omnimon had a few basic commands and was only 4K long, only for the 400/800. The second revision required the addition of a bank select switch, and was 8K long. Since it was addressed by the 400/800 as 4K, when you needed to use the code in the other bank, all the text on the screen flips upside down, you flip the switch and hit any key. The Xl and Xe versions of Omnimon do their bank selecting through the normal XL port for this function, so it is seamless.

So what can you use Omnimon for? Its main claim to fame is its ability to interupt any running program by pressing and holding the SELECT-OPTION-RESET keys. Depending on the sequence you press determines what kind of warm boot the Atari does. SELECT+RESET does NO warm boot, preserving the stack and flag values of the 6502. OPTION+RESET allows a warm boot (as if you had just pressed RESET) and interupts the vector at $C (initialation vector).

I think you can see where we are going with this - Omnimon was developed as a machine language developer's tool, much in the same way that the Happy modification was developed for legitimate backups. I.E. far more people use both products for software piracy. If you have an Omnimon! in your machine and you try to boot up an Electronic Arts program, for example, you will get a message that says "REMOVE ROM AT $C000", and the program hangs. (Hence,the need for the disable switch on the 400/800 version. There is no way to disable the xl/xe version, just switch it to an alternative OS.) The 400/800 version, since the disable switch just deselects the mapping of Omnimon to $c000 area, can be switched on and off at will.

I myself did not know what Omnimon was used for until I was using a sector editor on a program called Pharaoh's Pyramid, from Master Control Software. On it is a sector that reads, "REMOVE OMNIMON YOU DIRTY PIRATE". This got me to thinking, what does that mean? After about 5 months of playing around with the Omnimon board, I figured out how to use it to pirate software. In fact, it can be used to make most boot disks into binary files, and remove copy protection from countless more.

At the risk of sounding melodramatic, I can safely say that Omnimon hastened the demise of the Atari 8 bit computer by 2-3 years, because of its power.

Subject: 13.11) What is the difference between NTSC and PAL machines?

Software written for NTSC (North America) will always work on PAL machines, but software designed on PAL machines (Europe) won't necessarily work on NTSC machines.

Wayne Booth, mailto:trek@ihgp15.ih.att.com writes:

The differences with PAL and NTSC have to do with the number of lines displayed on the screen and whether they are using 50 or 60 Hertz.

If I remember correctly, I believe PAL has 625 lines/screen and they refresh the screen 50 times a second doing 1/2 the lines each refresh so they effectively repaint the screen 25 times a second. NTSC is 525 lines/screen with a 60 times a second refresh - again only half the lines each refresh so a 30 times a second frame rate. This would change the amount of time available during vertical sync pulse, and the number of lines that need to be redrawn each time.

Graham Thornton, mailto:nero@chicagonet.net adds:

I use both a real PAL Atari 800 and a PAL-ANTIC 1200XL here in the US.

Replacing the ANTIC chip with a PAL version changes the screen refresh rate to 50Hz which allows most of the PAL-only European software to run. Your system will still report itself as a NTSC machine, unless you change the ROM (see the Nir Dary upgrade), but most software doesn't care.

The one problem you might run into is your monitor. Replacing the ANTIC will mean your North-American Atari is now generating an NTSC signal at 50Hz, instead of the usual 60Hz. Some people will tell you that modern TVs and monitors don't care but that isn't actually true. My brand-new Sony Trinitron 15" colour TV/monitor goes bezerk with the upgraded 1200XL, but my 15-year old 10" Texas Instruments color monitor (designed for the TI-99/4A) is fine.

You can also use real European equipment here in North America, provided that you have a PAL-compatible TV/monitor. The frequency of the power system is irrelevant, as I use my 800 with a 110V/60Hz 1050 power supply.

Subject: 13.12) Is the software for the Atari 8-bit computers "TV-standard dependent?"

{some PAL demos flicker, or won't run at all on NTSC machines}

mailto:buesch@srv.net (Brent Buescher, Jr.) writes:

This is because PAL machines have a vertical refresh frequency of 50hz (NTSC use 60hz) which translates into more vertical blanking time for demos and other computation-intensive graphics software. So PAL demos that won't work on NTSC machines are usually returning from a VBI (vertical blanking interrupt) too late. Some also attempt to use more vertical resolution ("longer" display lists) than an NTSC display can handle.

mailto:thor@math.tu-berlin.de (Thomas Richter) adds:

Yes, it is. Mostly because the frequency of the vertical blank interrupt is different (60Hz for NTSC, 50Hz for PAL). The old OS A was not clever enough to notice the difference, so all system timings like the keyboard auto-repeat function depend on the TV system. These parts of the OS have been corrected

with OSB and the XL versions of the OS. However, as most games install a
VBI, their timing does still depend on the frequency -> they will run
slightly slower for PAL versions.

Another point is that the popular pseudo-colors used in the Antic-F
(Graphics 8) mode are not colorful at all when displayed on a PAL TV, because
of differences in the color encoding for the TV. The schematics of
the Xl computers include however a hack how to change the PAL version to
the NTSC version (the PAL versions include two crystals, one with 5/4th of
the frequency of the other. One is used for the system clock, the other for
the color clock), but I never dared to apply it.

Subject: 13.13) What programming languages are available for the Atari?

Revision : 1.0
Date.... : 4/20/1997

==
!!!! This section is under construction - HELP WANTED !!!!

The goal is to give information about all available languages
for the Atari 8-bit computer. This information will include;
title, last version, author, date and a short description.
It would also be nice to know how to get it and where to get
more information (like reference cards, reviews and such).

Some resources:
- The Multi-lingual Atari, Analog magazine 45, August 1986
- Assembler Interchange Format, Project description
Version 2.2, 2-2-1997, Freddy Offenga

If you like to help or if you've something to add already,
just contact me. There's still a lot work to be done....
Freddy Offenga, email-to: offen300@hio.tem.nhl.nl
==
There are quite a lot! To get some structure in this section it's
divided into the following catagories;
a) ASSEMBLER
b) BASIC
c) C
d) PASCAL
e) LISP
f) FORTH
g) PILOT
h) LOGO
i) All the rest

[D] = available on disk
[C] = available on cartridge

a) ASSEMBLER
- 130XE+ Makro Assembler v2.2, 1992 (Torsten Karwoth) [D]
Two pass 6502 assembler/editor. Supports extra RAM.
Highly compatible with Atmas II.
- Alfasm, Version 1.0, 1990 (Jeff Williams) [D]
Supports 65816 instructions (for the Turbo-816 upgrade
from DataQue Software). This assember is also known as
the Turbo-Assembler/16.
- Atari Assembler/Editor, 1981 (Atari) [C]
Two pass 6502 assembler/editor.
- Atari Macro Assembler, 1981 (Atari) [D]
Two pass 6502 assembler/editor.
- Atmas II Makroassembler, 1985 (Peter Finzel, Hofacker) [D]
Macro assembler with integrated editor and monitor.
- Bibo Assembler, 1986 (Compy-shop) [D]
- Datasm/65 assembler, Version 2.0, 1981 (DataSoft) [D]
Two-pass 6502 assembler.
- EASMD, Version 1.0, 1981 (OSS) [D]
- MAC/65 Macro Assembler, 1982 (OSS) [D/C]
Two pass macro assembler/editor.
- MAE, 1996 [D]
Supports 6502 and 65816 mnemonics.
- Nasm65 assembler, 1992 (Nat!) [D]
Highly portable cross assembler (written in C). Initially
made for the Atari ST. Highly compatible with MAC/65.
- PC-65 Assembler, Version 1.0 beta, 1996 (Jan Feenstra) [D]
Two pass 6502 cross assembler for the PC. The source
format is highly compatible with the ST-65 assembler.
- Synassembler, 1982 (Steve Hales, Synapse Soft) [D]
Two pass 6502 assembler.
- ST-65 Assembler, 1991 (A. Stauffenberg, F.Offenga) [D]
A cross assembler for the Atari ST (written in 68000 asm).
- 6502 Cross-Assembler "xa", 1997 (Andre Fachat) [D]
written in GNU C.

b) BASIC
- Advan BASIC Compiler (Advan Language Designs)
- Atari 800 Basic, Version 1.0, 1981 (Microsoft) [D]
- Atari BASIC, Rev.C, 1983 (Atari) [C]
- Atari Microsoft BASIC II (Atari) [C]
- BASIC A+, Version 3.05, 1981 (OSS) [D]
- BASIC XL (OSS) [C]
- BASIC XE, 1985 (OSS) [C]
- Turbo Basic XL (Frank Ostrowski, Happy Computer) [D]
Interpreter, Version 1.5, 1985
Compiler, Version 1.1, 1985

c) C
- ACE C (John Palevich & Ralph Walden) [D]
This is a newer version of 'Deep Blue C'.
- C/65, Tiny C (OSS)
- C65

- CC65, 1989 (John R. Dunning) [D]
This public domain package includes; compiler, linker,
assembler and object librarian.
- CC8
- Deep Blue C, Version 1.2, 1982 (John Palevich, APX) [D]
Drawn from Ron Cain's public domain C-compiler.
- DVC C, Version 1.01, 1985 (Ralph E. Walden) [D]
- LightSpeed C, Version 1.08, 1986
(Clearstar Softechnology) [D]

d) PASCAL
- Atari Pascal, Version 1.0, 1982 (APX-20102) [D]
- Draper Pascal, Version 1.5, 1983 (Norm Draper) [D]
- Kyan Pascal, 1986 (Kyan Software) [D]
Package includes; compiler, linker and assembler.

e) LISP
- INTER-LISP/65, Version 2.1, 1981 [D]
(Special Software Systems, DataSoft)

f) FORTH
- ValForth (Valpar International)
- Extended fig-Forth (APX-20029)
- fig-Forth, Version 1.1 [D]
- fun-Forth (APX-20146)
- Grafik-FORTH
- QS Forth (Quality Software)

g) PILOT
- Atari PILOT, 1980 (Atari) [C]

h) LOGO
- Atari LOGO, 1983 (LCSI, Atari) [C]

i) All the rest
- Action!, 1983 (OSS) [D/C]
- Quick, Version 2.0, 1990 (Raindorf Soft) [D]

Subject: 13.14) What is the Atari XEP80 Interface Module?

This section written by: mailto:raukamp@dame.de (Thomas Raukamp)

Since the development of the Atari 8-bit line of computers in 1979, users
wanted better text displays than the default 40x24. There has been some
attempts to satisfy this need, like the Austin-Franklin board or the Ace
80/80xl cartridge. For more informations about these modifications read The
Atari 8-bit Hardware Upgrade FAQ from David A. Paterson.

The Atari XEP80 Interface Module is Atari's entry to the 80 column field. It
lets a XL, XE, 400 or 800 computer system display a full 80 columns across
your monitor screen. The XEP80 provides a 256-character wide by 25-line
display window. Up to 80 characters are displayed horizontally at once, and

you can scroll horizontally all the way to the 256th character, depending on the application you're running. The XEP80 is connected to your system via a joystick port.

The XEP80 Module interprets commands from the computer for screen display or output to a printer. The module is supplied with an industry-standard 8-bit parallel port so you can connect a parallel printer to your Atari 8-bit (I even use a HP LaserJet IV on my 130XE ;)).

All programs that use the standard screen call (E:) should be compatible with the XEP80 Module. The software provided by Atari supports a 320x200 graphics mode - this mode only support direct bit images. Note that you can't use all of the standard graphic capabilities of the Atari anymore.

Although Atari recommends a monochrome monitor for usage with the XEP80, it runs fine with any type of composite monitor. The output looks great on my Commodore 1084 for example.

Along with the module comes a software-package containing an AUTORUN.SYS file, which is the XEP80 handler. If you want to use the module with an application that is compatible with the XEP80, which has it's own AUTORUN.SYS file, you can append the application's AUTORUN.SYS on the module's AUTORUN.SYS.

Subject: 13.15) What makes some XL/XE software incompatible with the 400/800?

Konrad M.Kokoszkiewicz, mailto:draco@mi.com.pl writes:

XL/XE software won't work on 800 if:

1) it uses shadow RAM at $C000-$CFFF and $D800-$FFFF
2) it uses RAM expansions at $4000-$7FFF controlled by PORTB $D301
3) it uses specific XL OS functions (like JNEWDEVC)
4) it uses illegal XL OS addresses.
5) it uses European Charset :)

Subject: 13.16) What games run only on the 400 and 800 models?

The following are reported as incompatable with models other than the original Atari 400/800. Most probably do work on XL/XE's if you use a translator to run the original 400/800 OS on your XL/XE.

Alley Cat Synapse
Apple Panic Broderbund
Aquatron Sierra On-Line

Subject: 13.17) How do I type a tilde (common character in Web URL's) on my Atari?

The Shadow, mailto:The_Shadow@spnt.com writes:

The question is: "How do I type the tilde or squigly line which is in most web addresses? I don't have a key for it..."

Answer: The tilde is an inverse backspace on the Atari 8-Bit which can
be very hard to type depending on the term program you are using,
however you can insert the hex equivalent very easily, which is %7e in
place of the tilde and it will work just perfectly. Do not put a space
either before or after the %7e.

I (Michael) add:

Some advanced Atari software supports the tilde character natively. E.g.,
you can type a tilde in Ice-T with the Atari Logo/Inverse Video key.

Subject: 13.18) What's the difference between ASCII and ATASCII?

David Moeser -- erasmus att iglou dott com -- produced this nice translation
table.

ASCII TRANSLATION TABLE -- IBM & ATARI 8-BIT (ATASCII)

Why
>buy something worst, heh? Obviously, they want to copy it.

AFAIK Alpha processors are manufactured by Digital which is now owned by Compaq and they're the one who own the technology. Judging from your conversation Intel have bought or licenced Alpha technology, is this true? If that's the case, where can I find more information about this since I have obviously missed something.

But this copy part is ridiculous, Intel needs the latest in technology just because of their efforts to keep the old structure and concept they used in the Intel x86 processors. A concept dating back more than Intel CPU's and that was great ... back in the 80's in the first Z80 home computers. Today Alpha and PowerPC processors are way ahead if you compare the ratio between technology used and performance given. Intel has often used better technology if you look at plain electronics involved. Still they get outperformed by relatively simple and cheap RISC processors.

Hmmm, is that Yogi as in the actual Yogi?

I may be putting a keyboard assignment system in...the feature is rife with potential to confuse people however, so I have to think about it.

I think Ultima 3's keys really are messed up in the actual 8-bit, if I remember correctly. This came up a while back. It's not the arrow keys, it's some strange keyboard set.

> For some reason it recognises 0/Insert to be the fire button though.

In 2.1, if your keypad doesn't work as a joystick, it isn't telling Windows
it's a keypad. What I mean by that is the keystrokes are not appearing (after
being routed through Windows) to Atari800Win as VK_KEYPAD0 etc.

This seems to be true of some keyboards, but I have no idea how to compensate
for it aside from making every key assignable. The virtual keycodes exist for
the explicit reason of not screwing up with varying keyboards.

I'm curious - in Internet Explorer for instance, with NumLock off, can you
scroll up and down with the 9 and 3 keys? This would show that it really is
showing up as a keypad, at least in some way. This is assuming you've already
had numlock off for Atari800win of course.

I'm fairly sure it's the monitor. The color banding is present
regardless of whether the monitor cable is plugged in or not. The
banding and the audio buzz are also present with an 800XL. Both the
XL and XE work fine with an old Apple monitor (as far as text display
is concerned and keeping in mind that the Apple monitor is mono w/o
audio).

(SNIP)
I disagree. Remember, it was the early eighties. The standard for professional office documents was a 10 pitch typewritten page. Graphics were uncommon. For its(small) size, the 1027 was quite capable, accounting to the too many that had alignment problems. Any dotmatrix was unuseable for business or college papers. Speed was not an issue. The 1027 was the computer version of the type writer, only enhanced. Today, I'd say, do'nt use any dot matrix printer for anything but multipart forms. A small interface and a notebook bubblejet are a much better combo. Just don't get a MAC or PC only printer. While not a notebook printer, my Cannon BJ4100(color) is smaller than my HP500, and thus almost portable. And best yet, it supports an Epson LQ2550C as a default, so it can work with most A8 graphics software. The only caveat with using any standard printer with an interface is that if the interface doesn't send BOTH CR and LF in the EOL tranlation, the printer must have a dip switch that can be set(or a permanent software setting equivalent).

Sounds like an RGD driver amp is out. Paying to get it fixed can be a good
choice since standard video monitors are hard to find.
If you are technically able, a good first thing to do is to open the monitor,
and
push down on all chips in sockets, and pull the board on the back of the tube
off and push it on(the right way). Tarnish could have broken a connection, just
like on a computer. Stay away from the high voltage section. If you don't
know electronics, then don't even touch a screw.

>Version. So the question is still "How make I good graphics?"..

In general, you start with a graphics tablet and draw the picture in four or more colors depending the the drawing program you are using. The Atari Touch table and the Koala pad are the most common. The PPI Super Sketch tablet is nice and have a few advanced features.
Once the base picture is done, "overlays" can be drawn. Using program, the overlays can be placed over the main picture to change it. You can also play with changing colors, and display resolutions using DLIs. Computes Mapping the Atari is great for the details on this. There are some animation programs around, PM Animator and Movie Maker are good.

Relating an incident from a FAX machine, somewhere around the toner/drum will be several IR sensors. One or more is/are probably dirty with toner. Cleaning may help. If it doesn't, one might be dead and need replacing. An IR sensor card might help if the unit can be powered with the toner/drum door open.

I see them regularly (2600 consoles) at local thrift stores for $2 to $5
usually lacking power supply, joysticks, switchbox, etc..
The accessories usually run $1 to $2 with some joysticks up to $3.
Game carts run anywhere from 25 cents to $2, usually bare but
ocassionally with boxes and instructions.

BTW- if you would like to purchase some...

Well, as long as it is pd or shareware, you could email them to me.
We're currently putting together the Pooldisk II cdrom, which will be
released october 24th in Herten (ABBUC meeting).
If you want, we can put it on the CD's.
If it is not pd or shareware, we're not interested...

Regards,
Bo Schreurs.

I have the same one and it works on my 400 and 800.
By the way I think this is the best home version of
Donkey Kong ever made! Have fun!

But how many Amigas do you want to use to do it? Rendering is strictly a number crunching affair. Rendering has nothing to do with the graphics hardware that makes the Amiga special. One Alpha machine running at 533 Mhz can probably do what 50 to 100 '040 Amigas could do. Just the savings on power consumption would justify the use and purchase of ONE Alpha as opposed to upty million Amigas. And the Titanic people were using a FARM of Alpha's to do the rendering. And yes, other tools were used to generate the scenes. If I remember correctly Mac, NT, and Unix boxes were used to generate the scenes.

Well, then it is a bad power supply in your monitor. Actually, this is
probably the easiest to fix. You have lost a power diode and/or the main
filter cap(s). Just replace them.

The cartridge port has all the lines you will need.

The easiest way is to use addresses in $D5xx since they are always
active. There is a -$D5xx select line, a R/W line, data, and address
lines on the cart.

If you use the cart. addresses ($8000-$BFFF), you must connect RD4 and
RD5 to +5v to activate the cart. buss. S4 and S6 select the two address
spaces in the cart.

I doubt that a Unix shop like D2 would put up with Mac
& they likey only put up with NT because of it's market
inertia/vendor support.

NT was the frontend, Linux was the backend. Although a
port of Lightwave to yet another Unix shouldn't be too
strenuous...

That game is definitely Alligator People by 20th Century Fox. The game was never completed and as far as I know only one prototype of it is known to exist. If what you have is a legitimate prototype, then it is an extremely rare item to have.

wrote:

Yes there were versions of King's Quest (I believe it was KQ5) for both NES and SMS, but "translated" is definitely the right word.
The SMS version was all right, but the NES version was nothing to brag about. Both had more of a menu-driven interface.

Falcon

>As proof that King's Quest could've been translated
easily to 8-bit
systems,
>check out the Sega Master System and NES
versions.
I never knew they made ports for those systems. Could it
be that they were
done
at the same time that KQ1 was rereleased after KQ4 to make
use of
the
point-and-click interface? Surely, the SMS and NES
versions didn't have
the
"type-til-you-bleed" interface, did
they?
This just restates my point that Sierra moved to newer 8
and 16-bit
machines
because they were supposedly newer and better. It
(apparently) doesn't mean
the
games were any
better.

** The following Atari 400/800 cartridges request the pleasure of
meeting your Atari computer.. **

** All the wonderful cartridges below are clean and are in good,
working condition..
** All the fabulous cartridges below are LOOSE, unless otherwise
noted..

Iï¿½ve rated the game labels using a ï¿½C1 - C10ï¿½ scale utilized by toy
collectors worldwide:

C1 - 5 = ranging from poor to fair condition
C6 = the ï¿½medianï¿½ condition range for ï¿½goodï¿½ items that collectorï¿½s
typically want in their collections..
C7 = good+ condition
C8 = very good condition
C9 = near excellent condition
C10 = excellent condition

- "Buck Rogers": very nice, shiny, label (C8) = $6.00
- "Deluxe Invaders": by Roklan, label is almost completely faded, hard to
read, not ripped or torn, just very faded (C1 for fading, C5 for
completeness of label) = $4.00
- "Gyruss": label is all text (C5) = $5.00
- "James Bond 007": label shows average wear, all text (C5) = $6.00
- "K-razy Antiks": (C6) = $5.00
- "MPP Smart Terminal": label is wrinkly (C3) = $3.00
- "Ms. Pacman" (2 cartridges): XE-type case, all text (C5/6) = $4.00/ea.
- "Midnight Magic" (pinball): XEGS-type case, illustrated, small piece of
??? rattling inside (C6) = $4.00
- "Miner 2049'er" (2 cartridges): one of the labels has tiny nicks/tears at
the top, the other is nicer and no nicks/tears (C4/6) = $4.00/$5.00
- "Pole Position": XE-type case, small wrinkling in upper left corner of
label (C4) = $3.00
- "Princess and Frog": by Romox, nice label, illustrated on BOTH sides (C6/7)
= $9.00
- "Shamus" (2 cartridges): red, opaque case(s), one has a label that is
wrinkled and peeling at the upper-right corner and the other shows average
wear.. (C3/C5) = $4.00/$5.00
- "Star Trek: Strategic Operations Simulator": one very teensy, tinsy nick
on the end of the label where it folds over (C6/7) = $8.00
- "Submarine Commander": by Thorn/EMI (C6) = $5.00

** Please send me your SHIPPING ADDRESS and a PHONE NUMBER that you can be
reached at to confirm your order and I'll make sure the game(s) are set

aside for you..

** Shipping and insurance is $3.75 via U.S. Mail ï¿½Priorityï¿½ for the 1st game and $.50 each per game, thereafter.. Shipping prices quoted are within the Continental U.S.A. only; Canada and overseas, extra..

** TERMS: Money Orders and Checks accepted. Money Orders are accepted for immediate shipment upon receipt of all items ordered. Checks are accepted with a 7-10 business day wait for clearance before any items ordered are shipped.

** PAYMENT INFO: Please make Money Order(s) and Check(s) payable to Chris Stafford and mail to this address:

Chris Stafford
P.O. Box 1482
Lompoc, California
93438-1482

** CONTACT INFO: I can be reached via e-mail; KITSCHY@THEGRID.NET for any questions you may have; phone number available upon request..

** I have EXCELLENT REFERENCES for completed internet transactions available upon request.. I strive to provide the BEST service possible- you won't be disappointed..

860. Connecting Atari 800 to RGB monitor

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-07 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <2LHZCZD@tos.pl.net>
Source record: 61613

Having looked at the monitor connector on the side of the Atari 800, it appears that there are not enough pins to be RGB, so I guess it's some sort of composite output.

What is it, and can I connect it somehow to an RGB monitor? What are the scan rates?

(I'm posting this on behalf of a computer club member, I know nothing about these machines so I hope this makes sense.)

861. FS: Atari 810 disk drive, best offer, at least cover shipping!

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-07 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEvpnyu.88D@netcom.com>
Source record: 61614

I found in my stuff an Atari 810 disk drive. Stock, no mods. Have no way to test it, think it did work the last time I used it. I stuck a floppy and closed the drive so the head wouldn't bounce around years ago, still there. No power supply.

Anyone want this? Worth anything? At least cover the shipping costs and it's yours.

Was once a big time Atari user, but that's 15 years ago. "Darth Vader".

863. knowledge documetation and standardization

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-07 00:00:00 UTC
From: Belitz <matz@kawo2.rwth-aachen.de>
Message-ID: <01bda98b$35868ac0$af92e289@irata.kawo2.rwth-aachen.de>
Source record: 61616

Hello !

I was absent from this group for a while.

But last days a read nearly every old article and there are some things I noticed:

There were a discussion about the ATR-file format (of DD-disks), some questions regarding SIO Protocol and commands, some about hardware modifications ...

For a lot of these questions documentation is availiable somewhere on the net, but hard to find. (f.e. ATR-file-header .)

What this ATARI community should do in my opinion are three things:

1. Collect all the knowledge of the community (f.e. who exactly knows, how the SIO-protocol works, but some people are interested in and have to find out every for themselves ...)
And maybe in one or two years some people arent present here at this group, the knowledge is lost forever.

2. Do a "standardization" task.
f.e. there are now five (I know) different image storing formats used by atarians:
SCP (Sparta-Dos sector-copy)
XFD (XFormer)
ATR (SIO2PC , but different formats are used by SIO2PC and some emulators 8-(.)
DCM
PRO (APE)

There arent a lot of docs available and so everyone uses its own format and its own extensions ...
So lets declare one or two as standard and discuss every extension that a member want to be made to this standard ...
So I also would give the advise, to do not use XFD format any longer ...

Thats the same to memory extensions:
Some of them will support the splitted access of CPU/ANTIC, some wont ...
What was first, what last ... Is there a collection of programs, that need splitted access ?

3. A collection, what tools/ games/extensions could be useful and who is working on such a thing ...
f.e. there are now 4-5 ATR2DISK programs written in the last one or two years. But when I ve had known, someone is working on such a thing, I'd

never wrote one for myself.
Some utils still exist, but nobody could find it on the web or at umich
..

So lets save ressources and work together ...

So here my ideas:

1. HARDWARE:
1.1 Custom-Chips
1.1.1 ANTIC
- pinout
- register description
- mode description
- display-list description
- cycle stealing description
- memory refresh description
1.1.2 CTIA/GTIA
- pinout
- register description
- player/missle description ...
1.1.3 POKEY
- pinout
- register description
- keyboard scan description
- keyboard matrix
- sound generation description
1.1.4 CPU
- pinout
- description of the differences to normal 6502
1.2. normal chips
1.2.1. 6520/6821
- pinout
- function in various atari models
1.3. Connectors
1.3.1 Joystickports
- pinout
- how do paddles work/ which resitance should the have ...
1.3.2 SIO
- pinout
- command-frame description
1.3.3 parallel bus interface
- pinout
- how should a normal PB device work

1.4 memory extensions
1.5 diskdrives
1.5.1 various models, commands accepted ...
2. Software
2.1 OS
2.1.1 releases, differencies

2.1.2. CIO/Handler model
2.1.2.1 E: handler
2.1.2.2 P: handler
2.1.2.3 K: handler
2.1.2.4 S: handler
2.1.3 SIO model
2.1.4 floating point arithmetic
.
.
.
2.2 DOS
2.2.1 generic D: handler model
2.2.2 versions ...

...

Useful software:
- nc like disk tool for easy copying, viewing and editing files, must support _all_
device handlers (D:, E:, H:/M: -harddisk in emulators ...), should support Atari/IBM EOL
- lynx like basic html viever - so that one can do the documentation for projects in html
- commandline mod/wav-player, image (bmp,gif ...)-viewer ...
- cool macro-assembler/editor/debugger suite, working with pure E:-handler (and with XEP80 and 80 columns), large code segments (30-40 kB) or at least include files ...

Useful hardware:
- as rtime8 are barely available, theres still a need for a good (and at its best compatible) RTC

And so on.

Note: This is a first idea, but tell me, what do you think of it

Matt

So could a farm of Atari400's, cunning RAM banking permitting.

> > >I guess you could use a C64 if you ported POV to it, so who cares?
> > >Anything with a CPU could do it.
Exactly. When it comes to rendering, its CPU, CPU and CPU that count. You
can put the source data together on just about anything, Amiga, Sinclair
Spectrum, HP-UX, whatever. All this 'Amiga is the best' stuff is just
plain juvinile rubbish. Who cares what machine you use? I don't. You use
the best machine & tools for the job. Each job has different requirements
and the choice varies accordingly.

> > The point was: Amiga can ALREADY run the OS an necessary

But what's the point if you can get better brute CPU elsewhere? And
probably at a better mip/$ rate too.

Linux/68k ~ Linux/Alpha...

It's the OS, not the hardware that's the central
point. D2 is a unix shop so any other Unixen fit
in rather easily there...

I like your ideas, and I have a feeling that most of the docs you request can be found in "de re Atari" and in "Mapping the Atari." I don't own either of those books myself, but I've heard enough talk about them to know that they are fairly indepth concerning Atari hardware. Maybe, copyrights permitting, someone could get versions of these books on-line (hint, hint).

As far as standardization goes, IMHO, there are only 2 viable formats, ATR and PRO. Since ATR files are essentially XFD files with a 16-byte header, I agree that XFD's could easily be phased out. On the other hand, people may argue that XFD's are better because they *don't* have the 16-byte header, but SIO2PC can't use XFD files. DCM files are compressed images, but only by a few K, and with hard drive costs so low these days, they could be phased out as well. I've never seen SCP files so I can't comment.

PRO files, however, are a different story. Since they are designed for use with the APE PRO system, and are the only files that can contain copyguarding information, the PRO format needs to coexist with whatever other format is the "standard." PRO files are not for everyone; well, if everyone (including myself) would register APE, then I guess they would be for everyone;-) Since you have to have the APE PRO system to use them, they're still a niche format, but they should not be phased out.

If you take a good look around the net, you'll find that the majority of the files out there tend to be ATR files, as far as I can tell, so I think the Atari community has, in a sense, already cast the democratic vote for the standard.

Play On!
Steven

If that is the case you can still do it with most things with a CPU
and now Linux. You can run Linux and MiNT on a ST, so a ST can do it,
so what is the bid deal?

> So lets save ressources and work together ...

I like the idea of pooling all the knowledge together, that's one of
the reasons I started my links page, there's a lot of info out there
on the web, but finding it can be difficult, and there's no central
resource out there that brings all this knowledge together.

It'd be nice to see a collection of files on the umich archive and a set of
web pages with the info. Although putting such a thing together would
be a big job, needing someone with a lot of time on their hands. Then
there's the problem of typing up the info. A good place to start
would be with some of the info already on the web, such as the

hardware manual (of which there are several copies on the www) and other good technical info which is available. Plus a dejanews search would help collect some of the good posts that have appeared on this ng.

From there it would be possible to see what's been collected and what's still missing, and who could be volunteered (duped?) =) into writing it. Another good addition would be De Re Atari. How far did that project get? Was it finished? Is it available on-line now? And then of course there's Mapping... an idea that's been argued about but not finished (as far as I know).

Another idea that's been kicked around before and might help finding info on the www is an Atari 8-bit web ring. There are enough pages out there to create a reasonably sized one and it would help more of the good pages out there be "found" by those looking for them.

So, any takers? *grin* =)

875. Atari-Bot arm, etc.

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-07 00:00:00 UTC
From: Patrick Robbins <Probb26666@usa.net>
Message-ID: <35a2511b.0@news3.uswest.net>
Source record: 61628

I'm still considering the options I have for interfacing the arm to my Atari-Bot. I have looked in to a parallel interface through the expansion bus. However, I'm using the XE Game system, which doesn't have an expansion bus, and would rather not change systems. The cartridge port has 13 of the 16 address lines and the data bus as well as atleast part of the control bus. I wouldn't need more than 8,192 addresses anyway so I don't need the whole bus. The reason I'm looking into this now is because I will need it if I want to impliment a black and white vision system using a hacked dram chip.

So, how do I read from and write to the cartridge port? I'm also not sure what parts of the control bus are missing. I just want to peek and poke addresses on the port so any specialized lines like DMA or whatever aren't important, I think.

Thanks,

Patrick Robbins

Correct - there's no RGB. There is one pin for composite video,
another for Luminance only (B/W video) and another for colour
information.

I'm in the UK so I can only describe what UK 800s have. The composite
pin can be connected to any VCR, TV, monitor with a composite input.
The signals are exactly the same as any video product i.e. 50Hz
vertical, 15.7Khz horizontal, i.e. the same as RGB except all three
colours are combined.

> I put the graphics in RAM. Any help would be appreciated.

Can't remember all the details about where to Poke everything, however
here's a quick resume.

If your bars are continously changing then you haven't switched PMG
on. I *think* poke 559,34 does it.

If it's constant then either you haven't defined the correct area of
memory (any free area will do - people generally use the spare area at
the end of screen RAM) or you haven't defined the shape. To define
the shape, you poke the shape data into the memory area. That's also
how you achieve vertical movement - you move the shape data through
the area. You *could* also define a string and reset its start address
to the beginning of that area and then make assignments to that
string. That way, you get "fast" animation in BASIC. Horizontal
movement is done by poke 53248,xpos (for player #0).

It's years since I've done it so am a bit rusty. Perhaps there is
someone else who can give you more technical details.

879. QUESTION ABOUT ATARI CARTRIDGE

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-07 00:00:00 UTC
From: ponydown@webtv.net
Message-ID: <16514-35A25F56-18@newsd-154.iap.bryant.webtv.net>
Source record: 61632

Hello,
I have an Atari computer game cartridge (DONKEY KONG). Now this
looks exactly like the atari 400/800 software (same size, says <<<LEFT
CARTRIDGE on top, etc.), but it says ATARI RX8031 on it.
My question is: Will this operate in an Atari 400 or 800 computer,
and if not, which system will it work in???

Thanks,
pd

Thats teh most important fact. I'm sure, that nearly all all information
one need is somewhere on the net ...

> A good place to start

I 've the hardware manual, De Re Atari, complete and essential map,
ATARI-Profibuch
and ATARI-intern. All are a little bit incomplete or even incorrect.
One should put this information together ...

> From there it would be possible to see what's been collected and

Yes, thats the way we have to go ...
There should be different persons for different sections as maintainer as
it is for the LINUX HowTo pages ...
And this group should have the view, what still missing and could be added.
Look at the FAQ- its an good example and covers lots of general information
now.

> Another idea that's been kicked around before and might help finding

885. Re: knowledge documetation and standardization

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-08 00:00:00 UTC
From: cb541@cleveland.Freenet.Edu
Message-ID: <6nuftfpjf1@pale-rider.INS.CWRU.Edu>
Source record: 61547

I got a BIG opinion.
ATR should be the standard.
Because it is the only image format that has a crc check.
All these files on the internet are getting busted (corrupted)
at some point, or rather, many.
And you can't tell because there's no crc check built in.
Steve Tucker has used some of the 16 byte header (4 bytes)
for a crc32 value of the image. Which you can authenticate
with his SIGNATR.EXE program, FREE, and part of APE 1.xx
shareware. I have this opinion, to stop corruption of files,
and stop the passing corrupted files around, we must have
an image format that has this crc check. I repeat myself,
but this is important. How many people download stuff,
can't get it to work. We could eliminate one possible
source of a problem if we KNEW FOR CERTAIN that the
file wasn't corrupted.
AMEN, Brother Ben.
(Also, check out my crc16v31.arc at my site in pdutils directory
http://www.en.com/users/russg. You can use my program if you
do null modem, C. Marslett 'util' transfers or even APE/SIO2PC
transfers to see that what transferred is the same as what
you had on the original. But Tucker's idea is the best.
(BUT I think some signatures in his ape117.zip are busted
by using his SIGNATR.EXE, or something.)
Thanks, Russ

comp.sys.sinclair,comp.sys.oric,comp.sys.atari.8bit,comp.sys.cbm,comp.sys.amstrad.8bit,comp.sys.msx,comp.sys.misc

Thanks to all those who sent me details of their services supporting 8-bit formats for the last edition of my 8BIT magazine which is due out at the mid/end of July.

The area where I still have a lot of gaps in the information is Web sites.

In particular, I would like to list sites who still carry information on the actual machines, rather than *just* emulated versions, as the (printed) magazine will be going mainly to actual users who have a PC/Mac as well as the original machines.

All suggestion welcome; here or to me at 8bit@spheroid.demon.co.uk

Thanks.

> some of my games over to my PC.
> Thanks.

Kathystest,
It probably wouldn't be that hard to build, but, why bother if you
don't own either an MI/O or Black Box? The SIO port is serial, so you'd
need a serial to parallel (shift register) converter. You won't really
gain anything. On the other hand, using a BB or MI/O, you have parallel
connection to the Atari's bus and all that's in the path is a buffer and
some conditioning electronics. In this case the speed benefit would be
useful. One consideration of this is cable length. It would probably
have to be rather short like about 6 feet. Serial can go up to about 50
feet. I'm not sure of the maximum thruoghput of the parallel cabling,
but serial is 19200bps even with the BB or MI/O (assuming stock software
and hardware).
I would like to also have something like this, since I own an MI/O and
my PC is right next to my 130XE. If anyone comes up with a program like
A.P.E. that can work via a parallel to parallel cable, please notify me!
The cable part is easy for me, but the software isn't.

XFD was part of the original SIO2PC spec. That's waht it used.
ATR's came later and eliminated the 16-byte header from the XFD's

> DCM files are compressed images, but only by a few K, and with
> hard drive costs so low these days, they could be phased out as well.

Actually, DCM files are used more for making boot disks transferrable
that for compression.
ARC and other compression schemes don't carry the boot information.
These can be used with DCM.

> I've never seen SCP files so I can't comment.

> you have to have the APE PRO system to use them, they're still a niche format,

> but they should not be phased out.

PRO format files must be used with the A.P.E. PRO system which isn't
free.
However, these files do support boot and copy protection.

ATR, DCM, ARC files are mainstays of the Atari community and must
remain. XFD files should not be banned since they can only handle 90K of
data. HTML and TXT and ASC files must be standardized for the Atari
community. HTML is already. TXT files should use PC cr/lf format while
ASC files should be text files with Atari EOLs. This way everyone would
know if you get a TXT file it readable on a PC and if you get an ASC
file it's readable on the Atari. I haven't seen an HTML reader for the
8-bit. If someone has one, let me know. I'd be interested in that.

Howdy folks

Somebody asked: MyDOS 4.51 (is that the latest version?).

Nope, there is a NEW cartridge version, but most of us seem to agree that it falls into the catagory (sp?) "DON'T TOUCH"

The latest Disk version is 4.53/3. It will use 3 digit sector counts is that is enough (more is needed) and it uses *.AR? where ? is 1 to 9 instead of AUTORUN.SYS (you don't have to append all you autorun files)

It's cool (I use it all the time), It's compatible and it should be on the net somewhere.

Howdy Patrick

from what I seem to remember, the only signal the XEGS doesn't have (somewhere inside) that you'd need for a Parallel Bus Interface (either XL or XE style) is the MAP signal. It can be generated (Stefan Dorndorn told me, he's a member of the German ABBUC (Atari 8 but club with 480 members world wide. Magazine is in German language) but you need to compare (AND, OR, etc.) I think FIVE other signals.

BTW the ABBUC (address is in Michael Currents FAQ) sells te scchematics to the XEGS for DM5 (if I remember correctly) which would be approximately 3 bucks.

Thanks for clearing that up. I don't use DiskCommunicator so I didn't know exactly how it worked. I've downloaded DCM files and converted them to ATR's, but that's the extent of my use of them.

>XFD files should not be banned since they can only handle 90K of data.

I'm not sure I understand what you mean by that. It seems that if they are limited to 90K, they're a perfect candidate to get rid of. Am I missing something?

>HTML and TXT and ASC files must be standardized for the Atari

Agreed. It's too bad that there isn't a better way to shorten ATASCII. ASC makes it seem like true ASCII text, which it isn't. We've been using the extension for so long, though, that I don't think anyone will fuss about it. The next question is: how do you go about encouraging compliance with this?

>I haven't seen an HTML reader for the
>8-bit. If someone has one, let me know. I'd be interested in that.

The only one I've ever heard anyone talk of using is Lynx, but that's through a shell connection to a Unix/Linux server. I've never heard of any 8-bit programs that will read HTML, but I doubt a good programmer would have a very difficult time with it, especially since the HTML standard is so well documented. Maybe some day.

Thanks for the comments, Robert.

An XFD is a raw image of the data portion of the disk, with no header.

An ATR image has a 16 byte header that describes the size and other things.

>> Actually, DCM files are used more for making boot disks transferrable

DCM files were used for compression because sending a 90k disk used to
take a whole hour at 300 baud (ahhhh the ooooold days :). Often the
DCM images were also ARC'ed to get even higher compression.

For as long as I can remember, the specs of the ATR format was in the
docs that came with SIO2PC, and it is still in there. Problem is that
people are too lazy to read the ****ing manual.
ATR files contain a 16 byte manual as stated in the docs.
XFD was designed for Xformer and has absolutely *nothing* to do with
SIO2PC other than that files can be converted between these formats.

>What this ATARI community should do in my opinion are three things:

Collecting everything that is worth knowing does sound like a good
idea. The SIO protocol is documented in the OS-manual.
Problem with that is that some companies designed their own commands
and never documented them. (and release that documentation that is).

>So lets save ressources and work together ...
>
>So here my ideas:
>
>1. HARDWARE:
<snip>
>And so on.

It really helps to get a copy of the OS manual, De ReAtari, Mapping
the Atari, inside Atari DOS, and stuff like that. All the information
is in those books. Funny thing is that sometimes these books do a
poor joob at really explaining it all in a way that everyone can
actually understand it. I am a programmer for a living, so I am used
to these kinds of manuals and eventually can figure it out. But
average users that want to write some programs of their own have
trouble reading these. To ask techy persons to write such a manual
will only produce more manuals of this kind. To write tutorials is
hard. Years ago you could have published these and get rich. So what
makes you think people will now volunteer to do this for free?

>Note: This is a first idea, but tell me, what do you think of it
I think you will have a hard time to find someone, anyone willing to

take on these tasks. Look at the megamagazine and stuff like that. Top quality info, but it is just to much work to put together a newsletter or disk magazine nowadays, if you can only sell 10 or 20 copies. To find out the specs for the DCM file format took me weeks, and writing it down and posting it here took me another week or two. All I got was one E-mail message. (Which is more than I expected anyway). But time is very precious for me, since I have many of these tasks, not to mention organizing a CD.
But is does help if there is a place where the collective knowledge can be stored. Such a site already exists, the Umich archives. However someone should actively manage such a site then. Problem again is that most of us die-hard 8-bit fanatics do this just as a hobby, so no way you can invest a lot of hours unless you are in an old-folks home. But they hide your modem when you enter there so I have been told.

Keep those XL's/XE's humming.
Ernest.

This compilation is from an answer to a question of mine and could be found
on the homepage of Russ Gilbert
http://www.en.com/users/russg

Frank Barrus
ACE (V0.02)
psiox.txt
01.08.94

Basically, the new header looks like:

WORD IDCODE 0296h
WORD SIZELO low byte of NUMSEC*SECSIZE/16
WORD SECSIZE 128 or 256
WORD SIZEHI high byte of NUMSEC*SECSIZE/16
WORD RESV1 reserved
WORD RESV2 reserved
WORD RESV3 reserved
WORD NUMERR number of bad sectors + 1
(all data is low byte first)

This is then followed by NUMSEC sectors of SECSIZE bytes,
and then immediately followed by a table of size
NUMERR of the following "bad sector" records:

WORD SECTOR sector number
BYTE CSTAT communication status
BYTE HSTAT hardware status
WORD RESV1 reserved
WORD RESV2 reserved
http://www.csh.rit.edu/~shaggy/software.html

Now we have three different formats here, not counted the 128/256 byte
(first 3 sectors) fault on some Emulators with DD disks.

As I have the right view, there is enough space hold all the information,
the three authors suggest.

The only question is, how to arrange it ...

Are all the three people still online here in comp.sys ?

I'm waiting for your suggestions.

Matt

P.S. Tooks me nearly 1 hour to collect and validate this information.

901. HELP w/ Atari800 DOS emulator

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-08 00:00:00 UTC
From: helbling@aol.com
Message-ID: <1998070822074100.SAA04647@ladder03.news.aol.com>
Source record: 61563

Please help me. In trying to run the Atari800 emulator for DOS, I get a SIGSEGV variable error and crash, on both my laptop & home desktop PC (although the program runs fine on the PC at work -- actually a MAC w/ DOS side).

I think this might be a conflict with an IRQ or possible a sound card. Can anybody help me reconfigure my home laptop to run Atari800?

Thank you

~chris helbling

Sounds interesting. I'm willing to try such a program. Unfortunately,
I'm separated from my Atari (snif) for a couple of months, so it would
have to wait until I get back. Of course, it would probably not be
GUI, just text, and it would probably not support all types of tags.

Very interesting indeed.

> people are too lazy to read the ****ing manual.

Well, I've followed this newsgroup off and on for several years now, and
I use it for most of the information I get on the Atari 8-bit computers.
I knew of the .ATR format only because of this newsgroup, and I wanted to
know the file format of it recently, and did some web searches for it,
until I found a snippet of information somewhere indicating that it was
in the SIO2PC documentation. As soon as I found this out, then I downloaded
the software and, yes, the information was there.

All this indicates that the original poster of this message has a very valid
point, which is that there is a lot of information out there, but it would
be very nice if it were all in one place that is easily accessible, and it's
hard sometimes to know where to look for the answer to a particular
question. Yes, it would be a big task. I'm willing to help. As soon as
I get home (I'm on an intership for two months) I'm going to start programming
and converting old documentation to an online format. I've got copies
of De Re Atari, Mapping the Atari, Many of Compute's books, Master Memory
Map, Mac 65, Action, and others that can all be put online. I also want to go
through all the old Atari disks I have (I have a bunch from a friend who
didn't have room for his 8-bit stuff anymore), and see what is valuable
there. I can probably
manage to find some hard drive space on a server at school (so that this
stuff is publicly available), but I don't know
how long I'll be there (probably only another year or so).

It would be really nice if all this valuable information were collected in
one spot, or at least if there were one central authoritative site with
links to other places.

I hear a lot about umich, but from what I understand the stuff there is
pretty old and undocumented. Perhaps this is a good place to start.

> Collecting everything that is worth knowing does sound like a good
> idea. The SIO protocol is documented in the OS-manual.

That's one thing I don't have and would really like to have online.

> So what
> makes you think people will now volunteer to do this for free?

It's a hobby. I'm willing to do it for free. It's fun and I learn a lot.
But, as you say, it's hard to invest too much time into a hobby. I
don't ever expect any financial gain from anything I do for the 8-bit
(which, admittedly, hasn't been much so far).

>
>Bob

I looked at the memory map I didn't know I had and I think I got it. If I use the $D5xx addresses it activates the CCNTL (CCTL) line, right? I think that will make things much easier. Can I also use the other parts of the interface, $BFFF-A000 and $9FFF-8000, at the same time as the $D5xx? I don't think I needed to ask that, but can I enable part of the interface such as $BFFF-A000 by tying only one of the lines to +5, like RD4, so the other addresses can remain part of ram?

One more thing, if I enable the other cart addresses will the computer still boot from disk?

Thanks,

Patrick Robbins

Yeah, right! Send him all 550 disks by e-mail ;).

> We're currently putting together the Pooldisk II cdrom, which will be
> released october 24th in Herten (ABBUC meeting).
> If you want, we can put it on the CD's.
Why? A CD-ROM is only accessible to a very limited number of people. I
mean, who is going to come to that meeting? To reach as many users as
possible, check out the following free web sites ...

www.xoom.com (you get 11 MB per account for free!)
www.geocities.com
www.fortunecity.com
www.tripod.com

XOOM is quite fast, so I suggest you give them a try! Also, contact me
about more details concerning the type of software you are going to
publish.

CU!

Ulf

There was "Your Atari Computer" from McGraw-Hill, by Poole, McNiff, and Cook. It had a lot on programming the 400/800 in BASIC, including sound and player-missile graphics.

Regards,

Tom

I don't think it's legal, unless all you intend to put up there is
shareware or PD stuff. But, it would be nice to have a place with all
(absolutely all) titles that were released. I miss some older games, like
Dino Eggs and there's probably a lot I never seen. Take Atarian care

Steve,
I humbly stand corrected. I was going from memory rather than reading
the spec. I won't do that again! It's hell to get old!

Sure does!

> Haven't heared anything about a WEBRING so far, please tell me more

It was an idea that surfaced a few months ago, but didn't seem to
receive much support, or maybe was only a half hearted attempt (well I
only saw 1 post about it). Creating a webring is easy, just go to
http://www.webring.org for all the details. It needs someone (or
several someone's) to be the RingMaster who maintains the ring. In
fact there is already an Atari 8-bit specific webring there, but with
only 1 site listed (which was the result of the previous attempt),
plus another ring that's not Atari 8-bit specific, but with an Atari
8-bit page. Once you get 5 pages in the webring you become listed in
the directory (whoopeee!). Given that there are over 200 Atari 8-bit
pages out there getting listed shouldn't be a problem.

An Atari 8-bit webring is something I'd like to see happen, as I think
it'd help link all the Atari 8-bit pages that are out there, making
info easier to find. I'd volunteer my page to join, so we'd just need
another 4 to start it... *grin*

What do people think about doing this? Good? Bad? Indiferent? Who
else would like to see an Atari 8-bit webring? Who would like to join
one? And who wouldn't? (and why not).

OK, OK, you got me. Remember the B-Key 400? It installed directly in place of the membrane keyboard. At the time, I thought it was pretty cool and much better than the membrane for typing in programs. I remember typing in program listings on the 400 using the membrane and my fingers got really sore. At least loading and saving programs to cassette took long enough for the fingers to recover!

Maybe Mr. Tucker can confirm this, but I have a feeling that APE income barely pays for the work he puts into it. He makes the unregistered version so useful, that many users never get around to sending him anything. I even feel a little guilty after sending money a long time ago, because he still allows free upgrades. I don't know of any other software companies that do free upgrades anymore.

Yeah, the B-Key is what I remember, too. I have an 800, so I never had to deal with the membrane, but I remember seeing the B-Key on a 400 in our local user group. I also remember that it rearranged the keyboard a little to make some of the keys fit (delete and insert moved?).

I'd love to see some scans from anyone owning a B-Key 400 to see what the differences were. It'd also be nice to know how it behaved after all these years, and how it compares to the other full-stroke Atari keyboards. I'd bet it's probably like the XL keys, but I also remember them being much thinner than the XL's.

Later!
Steven

The three byte sector count means that the directory is displayed like
FILE EXT 999
where other versions of Mydos would use
FILE EXT 0999
The four digit numbers are incompatible with some programs that read the
directory. I don't know what happens on a 3-digit version of Mydos if a file
has more than 999 or more than 9999 sectors.

No, there is no Windows version of SIO2PC. You might want to look at
APE, another program that does essentially the same thing. The
problem with porting the SIO2PC program to another environment is that
it is written in assembly language, not C.

I know that there are problems using a program like SIO2PC with a
multi-processing environment like Windows, as SIO2PC assumes complete
control so that it can get the timings exactly right. This was
probably more of a problem with Win3.0 than with Win95.

I helped to write a SIO2Linux program that does the same thing under
Linux. It seems to work pretty well, but will have problems if the
system is heavily loaded because of the timing issues.

> the same ATR file? That was weird.

I've seen XFD files of many sizes, basically ATR's less the 16 byte header. If
you want a list of 'offical' sizes, then it would have to be only the ones
supported by pc-xformer.

Most of the utilities i've seen will recognize at least SD, ED, and DD XFD's.

These should be 92160, 133120, and 183936 bytes, in the order mentioned.

I don't know which ones pcxf recognizes.

Well, no -- the problem is the CPU speed. Windows 95 chokes SIO2PC just as bad as Win 3.x does. Anything less than a Pentium 90 probably can't handle it. I have a 486DX4/100 with a bare Win95 installation that can't run it, and yes, it has the newer UART. The Win95 Kernel itself takes up too much processor time with maintenance tasks, so it's a real burden on a system to keep up with the Atari's timings.

I can't wait to get my Red Hat Linux installed with X-Window to see how much of a difference it makes :-)

There is "Atari Graphics and Arcade Game Design" by Jeffery Stanton with Dan Pinal. It focuses on algorithms and techniques for programming the Atari 8-bit computers. Things like PM graphics, etc. Its 474 pages. I sold mine a few months ago.

935. Tech Question RE: Lode Runner Data Disks

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-10 00:00:00 UTC
From: stevenposey@usa.net
Message-ID: <35a6674c.7577317@news.ioa.com>
Source record: 61447

I've got a Lode Runner data disk of about 100 levels I've created, and I'm trying to get it copied onto an ATR image through SIO2PC, but I can't figure out what the correct size and density is to create a new image as. (That wasn't grammatically correct, I know.) Does anybody know how to create an image with SIO2PC that will match the LR data disk?

Better question: Is there a utility for the Atari that will read the info on a floppy disk that will tell me the information I need?

I've been wanting to share the levels I've created over the years (every one of them IS solvable, but some are *very* difficult) but until I can get a working ATR of the disk, I'm stuck.

All help appreciated,
Steven

{This is really getting off the subject, but......}
It's pretty common to have free upgrades for registered shareware. In fact, I usually won't register a program unless it includes free upgrades.
APE is well worth it's registration price to me because, although I only use it occasionally, it is still being supported.

On the standards end of things, the best standards are those that become standard through use. I recall learning about some standards in my computer science classes that were made by committees and are totally useless and irrelevant because nobody follows them (take the TCP/IP layer model for instance...).

938. Old age - what are the risks?!

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-10 00:00:00 UTC
From: Gareth <garethd_@dial.pipex.com>
Message-ID: <6o61oc$t86$1@flex.london.pipex.net>
Source record: 61450

I was speaking to a collector who told me that he doesn't actually use most of his machines anymore (Vic 20, Jupiter Ace, Atari 800..) - just for special occasions. He told me that the risk of damage to an old machine - just through normal but regular usage is very high. Has anyone here had problems with the regular use of their Atari8 bit? What tends to break (I assume it's the memory)? How easy is it to obtain new memory chips for an 800XL? Sorry for so many questions and thanks for all your help.

Gareth.

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
connector, original cost $599.00, Joysticks $19.95 each, asking $50.00
or best offer. These SELL AT Video 61 for $49.95 used.

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
manual, power supply, connecting cables, oil, original cost $399.95.
Also have a non-working 1027, can be fixed at any Atari service center,
both printers cost new $399.95 each, asking $100.00 for both of them.
Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00. These
sell at Video 61 for $74.95, same price.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for
$59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.

Excellent book. There is also "Dr C. Wacko's
Miracle Guide to Designing and Programming Your Own Atari Computer Arcade
Games".
Much lower level than above, but gives good
examples in Basic. Also, there are lots of
references to Adventure Game writing, if
you have an inclination to those.

Maybe, but I've never been able to get the
high speed SIO transfer to work under W95.
I haven't tried W98 yet, maybe... Anybody
know if the high speed disk R/W works using
APE? I'm still looking for the best way to get
ATR/XFD files over to real Atari with the least hassle.

I speak as an interloper from another format (amstrad.8bit).

It works for us, and does no harm. I'd say go for it.

Incidentally, I am just putting together the last issue of my (paper)
cross-format magazine 8BIT. It's UK based but includes stuff from around the
world.

If anyone has any on-topic 8-bit stuff they'd like included in it (no charge
of course) please e-mail it to me at 8bit@spheroid.demon.co.uk

Ataris fail very seldom, compared to other old machines. What looks like a failure is often just a case of dirty contacts someplace. On the 800s, there are many such connectors that can be cleaned up. What does fail are devices that are at all mechanical, such as disk drives and printers.

953. The 9th Adventurer`s Convention

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-11 00:00:00 UTC
From: Larry Horsfield <Alaric@larryhorsfield.demon.co.uk>
Message-ID: <NAjn5VAjk2p1EwE2@larryhorsfield.demon.co.uk>
Source record: 61465

Hello all in Comp.Sys.Atari.8bit.

If you haven`t already heard about it, you may be interested to hear about the 1998 Adventurers Convention, which is being held in Birmingham (UK) this coming October, as it has been for the last 8 years.

The Convention is being held on Saturday, 24th October 1998, in the Ariel Suite of the Royal Angus Thistle Hotel, St. Chad`s, Birmingham B4, which is at the end of the A38M and easy to get to from all parts of the country.

The Convention runs from 9am to around 6pm and covers all formats from Spectrums to PC`s. Tables are available if you wish to bring along your own computer(s) and we actively encourage this as we depend on those attending to bring their computers, so the more the merrier! If you wish to bring hardware and/or software to sell you are more than welcome to, but no pirated software please!

The event attracts adventure enthusiasts from all over the UK, including Northern Ireland, and the atmosphere is very friendly and informal. Many of us stay overnight at the hotel and the evenings can be just as lively and interesting as the convention itself! We have yet to welcome anyone from outside the UK to the Convention, but we live in hope!

During the day we have the popular "Megapoints" competition running. In this the contestants get 20 minutes playing time at a specially written Spectrum text adventure, with the object of scoring as many points as possible in the alloted time. There are usually cash prizes and special certificates for the 3 highest scores. The adventure this year is being written by Ulsterman Jon Scott, author of various Spectrum text adventures published by Zenobi Software.

Tickets are available now and cost 6 ukp per person if you buy yours before 31st August, 1998. Thereafter, or if you pay on the door on the day, the price will be 7 ukp per person. Tickets may be purchased from:

Vicky Jackson, 128 Merton Hall Road, Wimbledon, London, SW19 3PZ

Please make cheques/PO`s payable to V. Jackson

* * * * * * * *

HOTEL ACCOMMODATION:

The Royal Angus Thistle Hotel has special room rates for those attending the Convention. These include full English breakfast and are as follows:

Single Room: 37.50 ukp per night.

Double/Twin: 32.50 per person, per night.

Please contact the hotel to book your accommodation, NOT the convention organisers. The address and phone number are:

Royal Angus Thistle Hotel, St.Chad`s, Queensway, Birmingham, B4 6HY

Telephone: 0121-236-4211

Don`t forget to inform the hotel you are attending the Adventurers Convention, otherwise you will be charged the normal room rates!

NOTE: The Convention is on the weekend before the start of the Birmingham Motor Show at the NEC. Whilst the hotel have promised to reserve a number of rooms for us, you are strongly advised to book your accommodation AS EARLY AS POSSIBLE to avoid disappointment.

If you have any queries about the Convention, or would like to reserve tables for your hard/software, please contact me at the email address below.

Hope to see you in Brum in October!

Larry Horsfield

Actually...
Not using older machines greatly increases the chances of chip failure.
Chips are required to be operated to normal operating temperature for them
to stay healthy.
The reason for this is that the silicon material inside the chip starts to
deteriorate with age and lack of use. Then when power is applied the chip
simply breaks down.
This may sound absurd but it's true.
I myself have experienced this, when I recently bought a Vic20 which was in
it's original packaging and had indeed never been used. It didn't work,
reason being is that one of the RAM chips had simply failed on powerup. I
replaced the RAM chip and the machine worked fine, until the other RAM
chips started to fail, one at a time, and then the VIC chip failed
(uncommon for a Vic-20). I gave up on the thing in the end.

My advice would be to run an older machine for a whole day, once every
month or so.

My 2c

Clockmeister.

Has Anyone Gotten 4 Josticks To Work With Atari800win?

I am VERY happy to play MULE again after 15 years
but THE best part about MULE is having 4 real live human players.
However I can not get the 4 joysticks to work past the color selection
screen. I can select color on any joy stick but not character (except for
stick 1) & must reboot. I am using Atari800Win ver 1.9/2.x dated 6/30/98
along with atariosb & mule.atr and Thrustmaster ACM
Game card plus 4 Logitech Wingman Light joysticks.
Istalled DirectX5 w/DirectInput.

What am I doing wrong?

Thanks in advance.

Get ANAD207.ZIP and DEANA.COM. If you still have a PC 5 1/4 floppy drive then you can use this program to copy the data over to the hard disk. The DEANA program converts the raw data into *.ATR files that can be read by Atari emulators.

However, I think this programs does not allow you to transfer back to Atari, but you may to give it a shot.

Hey, I've never heard of this, but it sounds really interesting. Anyone
know what sort of capabilities it had? Is it a synthesizer in the sense
of having a filter, etc, or modulation (ring mod, etc) stuff?

Thanks!

You can probably find a replacement 800 or 800XL for about $20.

Having said that, if you can do so, it would be better to *give* your
non-working Atari away to someone who can fix and re-sell it than to
just throw it away, because while these things are cheap now, there is
a finite supply of them, and if enough people just throw them away...

Just a word of advice:

It will almost certainly cost more to fix than it will cost to buy a
replacement.

Don't throw it away, though -- use it for parts, or give it to someone who
can fix it and keep it alive.

I was wondering if there is a cable or something to plug up a
400/800 atari joystick to a PCs gameport? Anybody tried this?
Would love to use my old EPYX joystick with the PC.....Thanks in advance
for any info!

Anyone have a good working copy of Zombies? I have tried both the "exe" and "com" file but it will not load on Atari800win 2.1. I am not sure what I am doing wrong but I am out of options. I have tried different Atari DOS's and nothing happens.

Does anyone have a "ATR" version of this program?

Thanks

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the
Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL,
800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend,
several people volunteer their time and energies by maintaining Periodic
Informational Postings for this newsgroup. Please take a moment to refer to
these documents before posting to comp.sys.atari.8bit. The answer to your
question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic
Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

You have about the best general 8bit page I know of already. Nice html, and it looks good on webTV too. If you want to make it even greater?

Have a special download page with ten truly great games (AR, Ultima, Fractalus, Ghosthunter, Preppie, MULE, and so on). Use screen captures from those games and provide docs.

Offer the download for Darek Mihocka's Xformer 2.5 which is the only one authorized to have the 8bit ROM images.

Link the APE website. Have a set of good UPDATED links, inc. the XL-it homepage, if you can find it.

Ummm, find the elusive Diamond OS image. Link the current Atsri 8 developers. A list of operating A8 BBS's.

Nice site, and the 80's music was a good touch.

The Rotberg Synthesizer I know is just a player program with a few built-in tunes, including Ravel's Bolero. It really sounded AMAZING back then (13 years ago?) and I would really love to hear it again to see how it performs compared to current standards.

Bye,
Thomas

You can use all three address spaces at once, yes.

You can enable just the $A000 - $BFFF address space with RD4 (or RD5...
whatever it is).

My experience has been that the mechanical parts wear out, not the
chips. ICs should last forever if you don't spike them with static or
such. The IC package may fail and allow moisture to get in there or the
bond wires contact may go bad if you get a lot of thermal cycling, so
keep it cool. Otherwise, it will probably be alive longer than any of
us....

```
< Lode-Runner data-disk-info >
Try to lay your hands on Turbo-Dos or BiBo-Dos...

When asking for a directory, it'll display the density of the disk by
reading the bootsectors first.

Possible densities: Single, Medium (or Enhanced), Double, and Quad...

Another way: try a good sector-copier, like US-COPY (1,2,3,4 or 5). Just
start to copy the disk, and it'll show the right density immediatly. When
knowing the density, you can abort the copy-proces, and create the right
.ATR-image. Then set the image as D2: in SIO2PC/APE and restart the copier
to copy the disk from D1: to D2: using the SIO2PC interface...

In article <21655-35A18C07-16@newsd-121.bryant.webtv.net>, Lorne H
(Mknzy@webtv.net) stated:

> My monitor is a Commodore 2002. It has 3 inputs just like my TV, audio,
> video and chroma. I have heard that the 800xl does not give a chroma
> output without modification. Do I need something else?

Check out:
http://members.delphi.com/lmcclure/svxl/index.html

If you don't want to do the entire modification, just installing the
chroma pick-off resistor lead that is mentioned in the article will help.

Date: 1998-07-13 00:00:00 UTC
From: lmcclure@ibm.net
Message-ID: <MPG.10137243abd96dcd9896c5@news2.ibm.net>
Source record: 61508

In article <2LHZCZD@tos.pl.net>, Mario Becroft (mb@tos.pl.net) stated:

> Having looked at the monitor connector on the side of the Atari 800, it
> appears that there are not enough pins to be RGB, so I guess it's some
> sort of composite output.

The 5-pin DIN on the side of the Atari 800 supports audio, composite color video, composite monochrome video (luma), and chroma. If you have a TV or other device with an S-video input, or a monitor with chroma-luma inputs (most Commodore monitors), this gives the best video available.

> What is it, and can I connect it somehow to an RGB monitor? What are the
> scan rates?

Scan rates are 15.75Khz horizontal at 60Hz vertical for NTSC. If by "RGB" you mean a VGA monitor, you would need a device such as Instant TV, which is a stand-alone TV tuner for VGA/SVGA monitors that also accepts S-video or composite inputs + audio. Cost is about $100-$130.

If you meant 15.75Khz RGB, as used by the Atari SC1224 monitor for the ST and others of that era, you have two choices: Either build an external RGB convertor (I can e-mail you the scans of an old article I have on this), or use a hack that links into the TTL-level signals used to determine the luminance levels for Atari screen output (resistors should be added to use it with an analog RGB monitor vs. an RGBI/CGA monitor). This mod is fairly simple, but has a couple of drawbacks: You are limited to a maximum of 8 colors, and the colors do not match those actually in use.

If one wanted to build the RGB convertor I mentioned, they should not only be comfortable with a soldering iron, but be prepared to etch the required PCB board. While wire-wrapping might work for construction, I seem to recall a recommendation was made against this in the article.

Believe me, I would also like to see SIO2PC run under Win95/98, but it's just not a good idea. The Atari needs a consistant stream of data, and when you throw it into a multitasking environment you're asking for trouble. Even though my Pentium Pro 200 can keep up, I still won't do it, because I'm afraid I'm going to be in the middle of writing data and the !@#$%^& PC is going to hose it because it decides to do a maintenance task instead. It's not worth the anguish and pain for me. My advice -- reboot and wait for the "Starting Windows 95..." logo, then press F8. At the menu, choose "DOS prompt only." Or better yet, get the TweakUI program from Microsoft's PowerToys, then uncheck the "Start GUI automatically" option under the Boot tab. That way, you'll always boot to DOS and you can start Windows the same way you used to under Win3.x, by typing "win" at the command prompt.

Play On!
Steven

1009. WTD:Amiga -> Lynx devkit

Hi there,
along time ago there was this cool little hand held console
called the Lynx. Unfortunately it was too bulky and had too short a
battery life and was discontinued.

The Lynx Development kit was little box from a company called Epyx,
who originaly designed the "Handy" console (a.k.a. Lynx), and the
engineers also worked on the original Amiga!!!

This little box, called Howard I think, linked to the Amiga via the
parallel port.

I was wondering if anyone had one of these development kits and the
software, possibly in a dusty corner somewhere....

Perhaps your company did Lynx development and you have a couple of
devkits in the warehouse gathering dust??

I'd really like to get hold of one, so if you have one get in touch

Cheers
Alex Holland

>Is there a version of Atari OS/A available to download?

Better yet -- can anyone tell me where to get a program to transfer my real OS/A from my 800 to disk? Or can I just binary-save a block of memory to get it, and what would that block be?

I've seen this request before, and I'd like to have it too, so Lode Runner looks like it's supposed to on an emulator (for those that don't know, LR is supposed to be on a dark BLUE background, not purple -- something in the OS versions changed to screw up the colors).

> --
> (remove _ to reply.)

Yeah,

I remember Ingersoll Electronic's incredible MIS-marketing of
Atari Inc!

Wasn't it some deal whereby Ingersoll got exclusive marketing rights to the

400/800 and VCS product lines, and could demand whatever price they liked?

So whilst in 1982 a Commodore VIC-20 cost around 200UKP, a TI-99/4A about
300UKP, the 16K Atari 400 with no BASIC still cost over 400UKP. I believe
that eventually Atari had to buy-back the rights to market the machines
in the UK.

Thankyou Ingersoll, for really screwing up the chances of a solid UK
user base.

Graham.

1013. ANNOUNCE: New Atari800Win Version 2.2

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-13 00:00:00 UTC
From: rich@cstone.net
Message-ID: <35aaad37.12025310@news.cstone.net>
Source record: 61518
Cross-posted to: comp.sys.atari.8bit,comp.emulators.announce

Atari800Win is a freeware emulator of the Atari 8-bit computer line
for Win9X/NT. It is located on my web page:

http://www.cris.com/~Twist/atari800win

Here are the new features in 2.2:

07-12-98 Ver 2.2
* A disk indicator is drawn at the bottom right hand corner of the
display when sector I/O occurs. The small block drawn contains the
number of the drive being accessed, and is red for writes, green
for reads.

* 5200 controllers work. F5 is reset, Shift-F5 is coldboot, F4 is
the start button. Keyboard 0-9 are equivalent to the 5200
controller 0-9 (you can use the keypad if you aren't using it for
a joystick). Keypad * or regular * work as the 5200 * key, and
keypad - or regular - work as the "#" key. When running in 5200
mode with a joystick triggers 2-4 operate as 5200 triggers 2-4,
NOT as function shortcuts like in Atari computer mode. WARNING: At
present several 5200 carts fail. This will have to be worked on
for a while.

* Found the (atari side) bug that was keeping multiple stick inputs
from working. You can now play with at least two sticks; I don't
have four to test but that should work as well. I HAVE played a
full game of MULE with joystick on one port and keypad on another.
It works.

* ModeX was abandoned in favor of simple linear modes at 320xXXX
resolutions. Some cards will support these modes, some won't - but
at least when present they work reliably. If you have "use ModeX
for 320 resolutions" set in your DirectDraw control panel you
might want to turn it off (default is off).

* Switched back to DirectDrawSurface revision one interfaces, since
it's obvious some cards that claim to be DirectDraw 5 compliant
are not, and do not support DirectDrawSurface2 or 3. If full
screen wasn't working for you, this was probably the reason (and
it should work now).

* Shift-ctrl + keycode is sent properly to Atari machine now

* Fixed a potential Windows crash condition when the Atari crashed

* Fixed a bug that could cause some cartridge options to not be saved out.

* DirectDraw mode transitions are a little smoother (one screen size to other)

* Sound is not restarted on mode changes, but it will still get a little garbled (unavoidable).

* Various small tweaks and refinements.

* Source code released (this doesn't imply it is done).

What schema? It's just a straight cable, pin 1 to pin 1, 2 to 2, etc.
You need a schematic if you want to build the SIO2PC cable which connects
an Atari to an IBM PC.
The problem is to find the 13-pin connectors, which are only found on Atari
systems. You can order cables from B&C computers (www.myatari.com).

For Sale: (why pay higher prices at auctions?)

130 XE Computer

1050 Floppy Disk Drive

410 Tape drive

Commodore 1701 composite monitor and cable(works great with the 130 XE)

Single Chip SIO2PC interface (PC serial port to Atari SIO bus)

a few dozen floppies, various titles... (Atariwriter, Chem Lab, etc) ask and I might have the disk

$100 for everything PLUS shipping USPS or make offers for part (plus shipping)

if interested e-mail me (NO SPAM) at ronwizbot@juno.com

>Believe me, I would also like to see SIO2PC run under Win95/98, but it's just
>not a good idea.

Not exactly what I meant. Ran SIO2PC
under DOS mode (rebooting as you describe)
but still high speed I/O would not work properly. On my old 486 DX2 and Win
3.1, it
worked flawlessly even as a "DOS Session".
Anyway, I'm going to try APE/Imagic and see
if one of these will do what I need.

>scan rates?

The monitor connector on the Atari 8bits has audio, luminance, chroma, and combined. In order to do RGB, you'd need to directly wire into the video hard ware a couple of drivers and some trimmer ports with transistors. I got about 90% done with one(to use with and ST color monitor), but had to get on to other things. A few years later, I'm still looking for the adapter board I built so I could finish it. The refresh rates are going to be generic for the early '80s, modern RGB monitors may not go low enough.
TTL (IBM) monitors require different hardware.

I think you can download Spartados, version 3.3 or 3.4 or so, from
atari.archive.umich.edu. Of course, then you have to get it onto an
Atari-readable disk. I think you can get Spartados from B&C
(www.myatari.com), or maybe Bob Klaas would have it.

And deservedly too. Only Norway (my country) and France beat them. Norway has beaten them twice now :-)

But, I am happy to say, Atari is the real winner (in my heart) and will live forever. Anybody up to making a good soccer game for the Atari ? I miss one with a little more speed than the ones we got. Like Kick Off on the ST, as the 8-bit version really s**k.

Steven,
if that is the case, then that's probably why I can't get A.P.E. to
work properly. I can see the 130XE's commands at my P133 but nothing
happens at the Atari side. No data is recieved. Then again, my cable
might be partially bad. I wonder, if I run the P133 in DOS only mode if
it will work. Hmmm. Something I have to try out.

Steve,
I know what you mean. I've created a few myself. Try DCMing it the use
DCM2DSK on the PC side. Disccomm should save all necessary disk size
info and DCM2DSK should create the appropriate ATR image.
I haven't tried this, but it 'should' work.

Ah, I think I see a potential problem... Yes, it's true that DOS 7.0 (under Windows 95) behaves a little differently than 6.2x. DOS 7 was intended to be as 32-bit as possible, and one of the things affected by that is the serial I/O. In order to run SIO2PC effectively, I'm pretty sure you'd need the 16550 UART (serial port chip), which an older 486 DX2 probably doesn't have.

OR, you might want to check how much free conventional memory you have. I don't really believe it should be a problem, but if you've got lots of drivers in memory, they're going to slow things down a bit, and maybe enough to keep SIO2PC from running.

Mind you, these are just suggestions. Without being able to see what's going on with your machine, I can only make educated guesses.

Good luck!
Steven

Thanks David, I'll try that for sure.

One other question while we're on the "binary save" topic:

For the 800, there was a cartridge called Monkey Wrench II that went in the
right slot along with Basic in the left. It was a programming tool that let you
do a lot of useful stuff like renumber line listings, automatically number new
lines, etc., etc. It also had a great machine language monitor in it.

Is it possible to save the contents of the Basic cart and the MWII cart into one
continuous file that could be booted from non-800 machines? Is it the same
process of writing a block of memory to disk like it is for the OS?

Thanks again,
Steven

http://www.hackerz.com/atari/atari8.html

That's where I started. I used the plans there to build the single-chip
version, and it worked the first time. I guess it took me about 3 hours from
start to finish, since I also had to study the pinouts to make sure I was
connecting what I was supposed to. Plus, I don't really solder electronics
much, so you could say I'm a novice. An experienced person could probably do it
in a half-hour or less.

Well, your site is the only one I could find The Last Starfighter at, so it
was worth it for me. Also that UFO game is cool!

Hello Arlene, I wouldn't suggest you use that particular computer for that.
I have an Atari 800 that has a slightly fuzzy screen output, I can send it
to you for free, if you are willing to pay for the shipping.

1052. Paper magazine recommendations?

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-14 00:00:00 UTC
From: Brian Watson <brian@spheroid.demon.co.uk>
Message-ID: <900440833.6237.2.nnrp-07.9e98ea3a@news.demon.co.uk>
Source record: 61412
Cross-posted to: comp.sys.atari.8bit,comp.sys.msx,comp.sys.misc,comp.sys.sinclair,comp.sys.cbm,comp.sys.oric

I've had many helpful suggestions of sources of support for those still using actual 8-bit computers (rather than under emulators), and have compiled a good database of web sites.

Those without 'net access would need paper and/or disk magazines for obtaining information and sources of support.

All suggestions (with contact details) from satisfied readers would be appreciated!

Replies here, or e-mail to 8bit@spheroid.demon.co.uk .

Thanks.

Yep another super release but a question to other users, have you found
that it tells you a lot of programs have caused it to crash. I don't
remember it being this picky before but would like to check to see if
its just me :)

Otherwise its superb and just needs a monitor & possibly a VSYNC option
for faster machines. Just to stop scrolly tearing..

But those are just luxury items :)

>--
>David J. Firth

David,
The following is taken from http://aegis.mcs.kent.edu/~clisowsk/8bit/atrc.html:

$D000-$D7FF (53248-57373)
This area is taken up by the hardware chips. The chips actually take
only a fraction of this space. If these addresses are further decoded
there is space for many, many more hardware chips. For example, The
PIA chip uses 256 bytes of memory but needs only 4 bytes. There is
room for 64 PIA chips in this reserved memory.
$E000-E3FF (57344-58367)
This is the location of the ATASCII character set.
$E400-FFF7 (58368-65527)
This is the operating system ROM
$FFF8-$FFFF (65528-65535)
These last 8 bytes contain the addresses of the interrupt vectors.
Upon power up the 6502 gets a reset pulse and looks up the reset
routine here.

When I tried saving $D800 to $FFFF, I got an 11K rom image, not 10K, and it
failed to boot. Can you tell from the map above where the actual address is?
Looks to me like the OS rom is in $E400-$FFF7, but that's not 10K, is it?

Is this the same addressing as OS/B, or does OS/A have different start and end
addresses?

Thanks for any help,
Steven

1059. Atari800Win Version 2.2 - Argh!

OK, I found my problem. When presented with the choice of either a directdraw window or a GDI window, I didn't realize I could get to a full screen mode by unchecking both. Now I'm back to normal.

My desktop screen still isn't updated though (the icons aren't redrawn) when I exit after playing in a directdraw mode.

Ron

Hi,

Who has for me a good Disccopier!
Which can handle Double/PHantom Sectors, Bad sectors and so on.

I tried APE116 but i cannot sync. I probably need a special cable.

So please if someone has it please email me!

THE PROGRAM IS NOT!! INTENDED TO BE USED TO GIVE THE COPY TO OTHERS.

i only want to put them on my PC!

Re: Soccer games on the Atari

Unfortunately, the only good ones we have are soccer manager games.
I'd love a good arcade-style contest and it can surely be done a lot better
than Kick Off, Fantastic Soccer or European Super Soccer (I won't even mention
RealSports Soccer from Atari or Thorn EMI Soccer), which all suck!

Personal message to Vidar: I know it's been months since I promised to copy a
program for you, but I still didn't receive it from my friend!

Greetings from France (3 - Brazil 0),
Bertrand M. (LEXX)

The area between $D800 and $DFFF contains the Atari Floating Point
library routines.

$D800 to $FFFF is exactly 10K - if you've saved it using the binary save
option within Atari DOS then it will make the file slightly larger *and*
it will not run. The following Atari BASIC program will create a disk
image called "atariosa.rom". It should be obvious but make sure that
OS/A ROM is installed in the machine when you run it!

```
10 OPEN #1,8,0,"D:ATARIOSA.ROM"
20 FOR I=55296 TO 65535
30 PUT #1,PEEK(I)
40 NEXT I
50 CLOSE #1
```

>
>Is this the same addressing as OS/B, or does OS/A have different start and end
>addresses?

OS/A is installed at the same location as OS/B and is exactly the same
size.

Again, due to lack of space I am forced to sell some Atari stuff.

-Atari 130XE with power supply, TV cable, user's manual(in original box)
-Atari 800XL with power supply (in original box)
-Atari 1050 5.25 floppy drive with power supply, cable, user's manual,
and Atari Dos 2.5 disk (in original box)
-Atari XDM121 printer

All items are in perfect working condition. They also look great with no
scratches or other marks. The original boxes are in very good condition.

For all this stuff, I am asking $40 US.
Shipping costs are not included in the above price. C.O.D. is available.

The problem is me, I guess. Is there a way to divide the production
process? I have enough input, but it needs to be formatted and printed.
I also cannot resist the temptation to just do one more hack for the
next issue....

I have considered doing multiple mini-issues instead of one big issue.
Say, 8 pages per issue. This would be inefficient and waste a lot of
postage, but it would keep some small bit of continuity.

Neither point is necessarily true. I tested a 130XE, sent it out only to find out that when received it didn't function anymore, from the time I shut if off bubble wrapped it and sent it the party one or more of the Ram chips has quit working.

Keeping the equipment cool helps prolong the life of any system. Atari 8-bit items in the computer area most problems lie within the Ram, disk drives, can be anything from a chip to the head becoming dirty or the Rails The head travels on becoming so cluttered with junk (either user applied) or just age that they need cleaned so the head can travel.

If you have a unit use it regularly! The sooner you find a problem exists the sooner you can have it repaired, and back into operating condition. Ram prices for the 16k, 64k, and 256k have dropped considerably in the past years and are readily available..If someone needs a custom Atari I/C without a crossover I have many used one in good working condition, as well as other suppliers, either new or used. Prices on these are way below the 1980 market so anyone can fix and Atari reasonably in this market.

You are referring to the Atari operating system ROMs, but there was also a
disk operating system called OS/A+. As for the color artifacting, I think
this was a hardware quirk, not an OS problem, but I could be wrong.
I remember playing Montana solitaire on my 800XL, where the red cards were
light blue.

My SIO2PC cables work well on all tested computers. I tried them on PC XT
running MSDOS 3.3, PC AT 16MHz running MS DOS 6.22, PS/2 80 (386) MSDOS 6.22
no HD only 1.44 floppy, P133 with Win95. Everything went smoothly on all
machines, no problems whatsoever. Triple speed etc., all working with APE.
I bet most of your problems is due to wrong wiring or bad COM configuration.

I nave an atari disk with midi files, and wonder how I can read it on a PC?
Is there a program to do this?

Some people told me It can, but with the program 'anadisk' the disk contents is put in 1 file. This isn't what I want, there are more files on the atari disk, and the filenames should be the same by a conversion.

What is the delighting answer?

greetings Johan Gielen

Yeah, I remember OS/A+ (is that the correct name; I thought I remember it a little differently), put out by OSS, I believe.

The problem I'm talking about isn't about color artifacting, it's about getting the main colors wrong. Boot up either Pinball Construction Set or Lode Runner on an 800, then boot it on a 130XE and you'll see what I'm talking about. On Lode Runner, the 800 has a nice dark blue background, blue platforms, brown Bungling Guards, etc. The 130XE is bright purple on everything (the emulators even show it as purple; only Atari800win 2.2 in Mode 1 comes close to getting the colors the way the 800 does them). Oh yeah, I'm talking about NTSC Atari's, not PAL. I don't know if the PAL's have any problems.

If it was a hardware quirk, then it was probably a quirk in the 400/800 line, and Broderbund and Electronic Arts never bothered to fix the affected programs after the XL/XE lines came out. Too bad, because I think those games on the newer computers look like crap. It seems like it was only a problem in GRAPHICS 8, though.

I got my 'A' rom transferred, and Lode Runner still looks the same way on the emulators as it does with the 'B' rom, so you're probably right about it being somewhere else in the 400/800 hardware.

Thanks to all for your help!
Steven

I think an issue mailed out on a regular basis, no matter how small, would be preferable to one big issue mailed out at lengthy, unpredictable intervals.

People need to believe that the magazine exists, and will continue to be published for a while. Most people I mention it to don't expect to see another issue. Even though you keep hinting here that you're working on it, I'm not sure I do either.

Also, advertisers need to see their ads that they've paid for in print.

> Is there a way to divide the production process?

I don't know what the process currently involves, but maybe there are people here who would want to help.

Or, maybe editing and production shouldn't be the same person. You could concentrate on pulling the content together, then someone else could handle the formatting and printing. Or some other combination that makes more sense.

I just really want to see AC on a regular schedule, somehow.

Is there anyone else here who believes in the importance of a North American printed 8-bit Atari magazine, and who can actually picture themselves helping out the production process?

-Michael

Cross-posted to: comp.sys.atari.8bit,alt.games.video.classic,rec.games.video.classic

** The following Atari 400/800 cartridges request the pleasure of
meeting your Atari computer.. **

** All the wonderful cartridges below are clean and are in good,
working condition..
** All the fabulous cartridges below are LOOSE, unless otherwise
noted..

Iï¿½ve rated the game labels using a ï¿½C1 - C10ï¿½ scale utilized by toy
collectors worldwide:

C1 - 5 = ranging from poor to fair condition
C6 = the ï¿½medianï¿½ condition range for ï¿½goodï¿½ items that collectorï¿½s
typically want in their collections..
C7 = good+ condition
C8 = very good condition
C9 = near excellent condition
C10 = excellent condition

- "Buck Rogers": very nice, shiny, label (C8) = $6.00

- "Deluxe Invaders": by Roklan, label is almost completely faded, hard to
read, not ripped or torn, just very faded (C1 for fading, C5 for
completeness of label) = $4.00

- "Gyruss": label is all text (C5) = $5.00

- "James Bond 007": label shows average wear, all text (C5) = $6.00

- "K-razy Antiks": (C6) = $5.00

- "MPP Smart Terminal": label is "wrinkly" (C3) = $3.00

- "Ms. Pacman" (2 cartridges): XE-type case, all text (C5/6) = $4.00/ea.

- "Midnight Magic" (pinball): XEGS-type case, illustrated, small piece of
??? rattling inside (C6) = $4.00

- "Miner 2049'er" (2 cartridges): one of the labels has tiny nicks/tears at
the top, the other is nicer and no nicks/tears (C4/6) = $4.00/$5.00

- "Pole Position": XE-type case, small wrinkling in upper left corner of
label (C4) = $3.00

- "Princess and Frog": by Romox, nice label, illustrated on BOTH sides (C6/7)
= $9.00

- "Shamus" (2 cartridges): red, opaque case(s), one has a label that is wrinkled and peeling at the upper-right corner and the other shows average wear.. (C3/C5) = $4.00/$5.00

- "Star Trek: Strategic Operations Simulator": one very teensy, tinsy nick on the end of the label where it folds over (C6/7) = $7.00

- "Submarine Commander": by Thorn/EMI (C6) = $5.00

** Please send me your SHIPPING ADDRESS and a PHONE NUMBER that you can be reached at to confirm your order and I'll make sure the game(s) are set aside for you..

** Shipping and insurance is $3.75 via U.S. Mail ï¿½Priorityï¿½ for the 1st game and $.50 each per game, thereafter.. Shipping prices quoted are within the Continental U.S.A. only; Canada and overseas, extra..

Just curious - have you used the "A" ROM and tried to play the old
Synapse games "Chicken" or "Slime"? I used to play Chicken quite a lot
on my 130XE using the Translator disk, but I think it needs the OS-A
ROM to work correctly. (The game binaries are available on the Closer
To Home site I believe...)

>Is there anyone else here who believes in the importance of a North
>American printed 8-bit Atari magazine, and who can actually picture
>themselves helping out the production process?

Boy, this is a fascinating question which has application to a number of orphaned systems. I avidly subscribed to and read the "classic" Atari mags of the mid-80's - early-90's, most notably of course Antic and Analog with the occassional Compute thrown in for good measure. I read the programming articles and typed in all of the BASIC and ML stuff.

But I think the focus has shifted considerably since then, especially as it applies to my old systems. I still love playing the games on the Atari 8-bits, and now emulation has made it even easier to find some time during the day to get in an hour or so. However the things that made the earlier mags valuable to me (i.e. the tutorials and type-in stuff) simply don't appeal to me now. And so I think that a new Atari mag in the traditional sense would probably not be a viable publication.

What I would like to see however is a mag full of game and application reviews, strategy guides, game an app documentation, screen shots and things like that. The games still have not lost the playability and interest that they originally had, at least not for me. I would gladly fork over some bucks to see some of those great games given a modern day magazine layout.

And of course the opportunity to connect with whatever Atari community resources still function (users groups, vendors, etc) would also be a good reason to subscribe to such a mag.

One thing that I think does bear pointing out however. I do not think that realistically anyone should get an idea that publishing such a magazine has a profit potential. Let's face it - that's why the original mags died in the first place. And the thought that a decent worthwhile still-interesting magazine can be put out on a monthly or semi-monthly basis with only home-brew and/or random fan input doesn't seem too feasable - certainly not on a long-term basis. I remember towards the end of Antics and Analogs days how desperate were the cries for worthwhile type-ins. They just weren't getting the input.

There is at least one alternative to publishing a new magazine. Most of you have probably visited the Antic site on the Internet. They have the permission of the publisher to put as much of the original Antic material up as they can find. I believe there are currently 11 full issues up now. I know that there are still thousands of people out

there with full libraries of Antic and Analog magazines. How about start scanning and supporting these web sites? Things like old reviews, info articles, even old ads and covers are fascinating to people still interested in the Atari but who never had access to the mags or who have long ago given up their collections. A site with the content of every Antic issue ever published would be a wonderful thing for the Atari community. At least old Atarians like me would get a big kick out of it.

Anyway, just my few cents...

Dave B.

>To Home site I believe...)

Tried Chicken from two different files with the A rom and it does not
play right. Either it stacks the eggs along the top not allowing any to
drop or the Chicken gets a boot up the A&& and thats all it does.

Not tried Slime although I know it did not work before. Both seem to be
emulator related (I think) but hell, I'm happy to play the other 999999%
that do work :)

PACE meets second Saturday of each month at the Largo Public Library, 351 East Bay Drive in Largo. Meetings start 2PM. Visitors are welcome. Membership is $12/year.

I'm not a member (living on Long Island does present commutation problems) but I edit the Ol' Hackers AUG newsletter and we exchange newsletters with them. I just happened to have the last one near my desk when I read your message.

Good luck!

Alan

Health problems within my family preclude me from jumping in here right
now, but at a later date, I had hoped to re-involve myself with the
magazine on some level.

Meanwhile, there's a message thread on Fido about print magazines for the
8-bit and the relative wealth of them elswhere in the world.

There's also a lot of advanced talk here and in that mailing list based in
Poland that's interesting enough for at least a few articles.

But, may I suggest, that even though it's 1998, there are still some
8-bitters stuck in the 80's and even a few beginners. We have one such
beginner among the local membership in OHAUG and he's learning fast. So,
to balance the magazine even further, I'd say that beginner-type articles
are still appropriate.

(DUCKING SLINGS AND ARROWS AT THIS MOMENT!!!!!)

Then another possibility would be a
"half-issue" based on software, tutorials,
hardware reviews, etc. and then then the
next on hardware hacking. That would
make possible splitting the production duties,
since another person(s) could put together
the non-hacking issue.
Actually, New Atari User (Page 6) pretty
much would seem to fall into the category
you describe. I subscribe to it, and it helps
prevent "withdrawl" while I'm waiting for
the next AC.
Another possibility which has some definite
pitfalls as well as advantages is electronic
distribution. Helps the Post Office manage
its surplus, among other things. :-)

Bob,
The only way I can think of is to use A.P.E. Boot with A.P.E. using a
SD33.ATR image on the PC and format a real disk (Atari side) then copy
the DOS files to that disk. By renaming (assuming that it isn't named
like this already) the SD 3.3 DOS files with X as the first character
and .DOS as the extension. SD 3.2D's XINIT.COM (be sure XINIT.COM is on
(one of) the active images) will find this file and allow you to format
and transfer this info to the new disk.

Color differences like this are usually caused by programs depending on artifacting. The problem is the artifacting colors are different between the CTIA (used in early 400s and 800s) and GTIA chips.

Hallo !

I`ve posted this message one week ago, but got no response at all ...
So I`m wondering if anybody had read it or if there is no interest at all.

Plaese give me at least a little response, when you read this 8-).

Matt

First I'd like to thank all people respondihg to mee.
And I 've learned, that not all the information posted here, will reach my
Newsserver 8-(.
The crc check was explained in an answer to a similiar question I asked
last year.
(Special thanx to Russ)
And here we go ...

sources:

Nick Kennedy
SIO2PC (4.10)
readme.txt (V4.10)
dated 20.12.95

WORD = special code* indicating this is an Atari disk file
WORD = size of this disk image, in paragraphs (size/16)
WORD = sector size. (128 or 256) bytes/sector
WORD = high part of size, in paragraphs (added by REV 3.00)
BYTE = disk flags such as copy protection and write protect; see copy
protection chapter.
WORD=1st (or typical) bad sector; see copy protection chapter.
SPARES 5 unused (spare) header bytes (contain zeroes)

Steven J. Tucker
APE
http://www.nacs.net/~classics/authatr/
20.10.96
]] The 'standard' nickatari ATR is: (first byte listed as 1, not 0)
]]
]] 01: NICKATARI Signature
]] 02: "
]] 03: Paragraphs, low
]] 04: Paragraphs, high
]] 05: Sector Size, low
]] 06: Sector Size, high

]] 07: Extended paragraphs
]] 08..16: Unused
]]
]] Current APE changes to the ATR header:
]]
]] 8 : 32bit Authentication CRC
]] 9 : 32bit Authentication CRC
]] 10: 32bit Authentication CRC
]] 11: 32bit Authentication CRC
]]
]] 16: Bit 0: Write Protect
]] Bit 1: Sealed/Authenticated A
]] Bit 2..7: Unused
This compilation is from an answer to a question of mine and could be found
on the homepage of Russ Gilbert
http://www.en.com/users/russg

Frank Barrus
ACE (V0.02)
psiox.txt
01.08.94

Basically, the new header looks like:

WORD IDCODE 0296h
WORD SIZELO low byte of NUMSEC*SECSIZE/16
WORD SECSIZE 128 or 256
WORD SIZEHI high byte of NUMSEC*SECSIZE/16
WORD RESV1 reserved
WORD RESV2 reserved
WORD RESV3 reserved
WORD NUMERR number of bad sectors + 1
(all data is low byte first)

This is then followed by NUMSEC sectors of SECSIZE bytes,
and then immediately followed by a table of size
NUMERR of the following "bad sector" records:

WORD SECTOR sector number
BYTE CSTAT communication status
BYTE HSTAT hardware status
WORD RESV1 reserved
WORD RESV2 reserved
http://www.csh.rit.edu/~shaggy/software.html

Now we have three different formats here, not counted the 128/256 byte
(first 3 sectors) fault on some Emulators with DD disks.

As I have the right view, there is enough space hold all the information,
the three authors suggest.

The only question is, how to arrange it ...

Are all the three people still online here in comp.sys ?

I'm waiting for your suggestions.

Matt

P.S. Tooks me nearly 1 hour to collect and validate this information.

and Barrus).
Kennedy and Barrus call (as I read them) the 4th WORD the
high byte(s) of the paragraph size (size/16). It seems that
Barrus calls the WORD a high 'byte'. So the sio2pc nick
K. one and the Barrus one call WORD 4 (bytes 7 and 8, starting
at 1 or bytes 6 and 7 starting at 0) the high byte(s). Tucker's
is the only clear one which just gives one byte, not two
bytes for the high/extended size. That makes sense to me
, if I were doing it, which I'm not, and Kennedy and Barrus
don't seem to be available/participate in csa8. Anyways,
5 bytes is plenty to describe a size of the image in
paragraphs. It describes up to a 268435440 (268 meg)
image size. An additional byte would go to (my calc puked
on the number... another calc)... 68.7 billion bytes!
68.7 gigs image. ($FFFFFFFF0). Anyways, I'm betting
Tucker is correct and the 4th word is just one byte
for hi/extended paragraph size.
As for the 'follower' in Barrus, I don't think this is
needed for a simple .atr, and I don't believe it is
used. The Follower bad sector and stuff sounds like
some beginning 'Pro' type image or something.
Russ

Body handling: HTML body converted to readable text

The file HTML.COM is an Atari 8 bit binary.

1) You need a HTML file for the program to display, If you do not have one type this in and save it with the HTML.COM program.
---Start---

Hello

This is HTML test file

---End---
NB. Just the indented text between ---Start--- and ---End---

2) Run the program HTML.COM on an Atari 8bit or an emulator. Use Binary Load Command 'L' in Atari DOS 2.X

I suggest if you are using an emulator then turn artifacting OFF, as the program uses an 80 column screen.

3) The Program will give you a few short instructions. Basically just type the name of you HTML file (as saved above). Press the return Key.

4) The program asks for an "output" (a bit vague), just pressing return outputs the HTML file to the 80 column driver used by the program. You could equally type E:, xep80 driver or D1:OUTPUT.TXT

If you pressed return or type E: then you should now see your HTML file drifting before your eyes. Use Control+1 to pause the output, press again to carry on.

NB. The HTML.COM program will NOT deal with ASCII Carrage Return characters. By this I mean it just lets them through to the output. This looks a little untidy at the output stage as the ATASCII has a different use for this character. You my need a program to strip the Carrage Return character (13 or $0D) from a HTML file. I cannot think of anywhere that the HTML file format actually need this character. Who knows if the author of the program is reading may be he can fix this.

Have fun

Dave

> Isn't a webring something like a url list?
> (i.e. similar to a long list of links?).
> Anyway, I've got an Atari 8bit homepage too,
> so I won't mind to join as well.

yes, kind of. The idea is that you put some special HTML code on your page that links to the next page in the ring, with the last page connected back to the first (hence a ring). Generaly everyone has the same image on their page, and you have options for going to the next and previous pages in the ring as well as jumping 5 pages forward or backwards in the ring and a random page. You don't have to worry about manualy editing the links yourself though, you just put the image on your page and that's it from your point of view. I did discover a general 8-bit webring recently, so if you want to see an example take a look at:
http://

anyway, looks as if there is some support for the idea, unfortunately (or maybe that should be fortunately =) I'm going away on holiday soon, but if no-one else has started one by the time I get back (almost 4 weeks time) then I'll look into it.

True, but I have a GTIA Atari 800, not a CTIA. It seems like there is some other difference in the hardware that is causing the color shifts, and it looks like Graphics 8 is the only mode affected, that I can tell.

There is no apparent problem in the artifacted colors. The real problem is in the background color, which seemingly has nothing to do with artifacting.

I'd be real interested to hear from someone else who actually owns a GTIA 800, a 130XE and Lode Runner. I've seen LR on a 1200XL and it looks just like the 800 screen. I don't remember how it looks on a 600XL or 800XL.

Seems as though the guy who created it gave up on the idea. If he's
still around then that webring could be re-started, otherwise we can
just create another one.

There's also a small colour adjuster on the circuit board.

After I replaced the NTSC Antic in my 1200 with a PAL Antic, I had to
adjust the
colours slightly.

Maybe your 130XE needs a small adjustment?

Graham.

Hi all Atarians,
does anyone to the disk format which SpartaDos is using?
Or can someone point me to an URL where I can read more about it?
I'm referring to: Where does the Directory start,
What is the Directory structure,
How are sectors linked,
What is the sector size in bytes, etc.
I like to incorparate this format in some utilities of mine.
Any help would be appreciated.

Thanks,
Bo.

Thanks for the kudos, James. I always wondered whether anybody read (and understood) those articles on the COLRVIEW system I wrote. I took a fair amount of heat from a submitting author, accusing me of feathering my own nest when I should have been approving his articles.

Back on the subject, I could volunteer an hour here and there to article formatting. I've been using a PC and MS Word (forgive me for mentioning the mortal enemies to the die-hard Atarian) to edit the local user group newsletter, rare though it has become.

I haven't looked on the archive recently, but Spartados should be in .DCM
files which you make into bootable disks with Diskcomm 3.2.

Hallo !

The following information is taken from "BW-DOS" manual, chapter 6.
I think, it should do for you 8-).

Matt

DISK FORMAT

BW-DOS uses the same disk format as SpartaDOS. There are four kinds of
sectors: Boot sectors, Bitmaps, Sector maps, and Data sectors.

Boot sectors are sectors 1, 2, and 3 on every disks. These sectors are
allways 128 bytes long, and contains a small program, which is started
while you turn the computer on - this program is loading DOS (or other file
specified by the "BOOT" command). The Boot loader is not the same on BW-DOS
and SpartaDOS disks, but the function of both the loaders is almost
identical.
In the sector 1, there is an important table, which gives to the system
several informations about the whole disk (the numbers are positions in the
sector 1):

7: Allways $80. This byte is used as an identification of SpartaDOS
compatible disk. When this value is different, you'll get the Error 148
while accessing such a disk.
9: Sector, where is the first Sector map of the main directory. (2
bytes)
11: Number of every sectors on the disk. (2 bytes)
13: Number of free sectors. (2 bytes)
15: Number of Bitmaps.

16: Sector used for the first Bitmap. (2 bytes)
18: The first sector, where may be allocated a data sector for a file.
This counter speeds up write operations, because the DOS need not to search
a free sector in the whole Bitmap. In addition, it'll leave a few sectors
on first tracks of the disk unused to provide space for directories. Such a
space will be used for files only when there is no other free sector on the
disk.
20: The first sector, where may be allocated a sector for directory.
22: Volume name of the disk. (8 bytes) This name - together with the
sequential and random numbers - is used for identification of the disk.
(The DOS bases its decision if the sectors in buffers are correct on this.)
30: Number of tracks; when the bit D7 is set, then the drive is double
sided.
31: Size of sectors (excepting Boot sectors). Possible values are 128,
or 0 (for 256 bytes/sector).
32: Version of disk format. BW-DOS (and every SpartaDOS versions 2.x
and later) uses the same format marked as $20 in this byte. Older disks
($11 - created by SpartaDOS 1.x) may not be used under BW-DOS.
33-37: Reserved for different SpartaDOS versions.
38: Sequential number of the disk. This number is incremented every
time you're making any changes on the disk using BW-DOS functions.
39: Random number of the disk. This number is created while formatting
the disk.
40: Sector, where is the first Sector map of file specified for
booting. (2 bytes)
42-47: Reserved for different SpartaDOS versions.

The Bitmap contains the information, which sectors are free, and which
are used. Each byte holds the information for eight sectors - the highest
bit D7 is for the first, and the lowest bit D0 for the last of these eight
sectors. The bit set to 1 means, that the sector is free. The first byte
contains the information for sectors 0-7, second byte for 8-15 etc.
When more than one sector is necessary for the map, it is stored on the
disk as a compact block (it may be for example in sectors 4, 5, and 6).

Sector maps contains information, which sectors are used for a file.
There are physical numbers of sectors (2 bytes each) in a Sector map.
The first number in every Sector map (in fact two bytes!) points to the
next Sector map of the file. Zero indicates the last map.
Second number points to the previous map of the file; zero indicates the
first map.
The rest of the map contains numbers of data sectors used for the file.
There are 62 (128 bytes/sector) or 126 (256 bytes/sector) numbers. When the
number is zero, it indicates a non allocated part of the file - see the
description of "HEXEDIT" command for more info.

Data sectors are simply full of data.

FORMAT OF DIRECTORIES

Directories are in fact special files; they may be directly accessed by
adding 16 or 32 to the "aux1" value while opening the file. The directories

contains information about every files and subdirectories, 23 bytes each.
(The numbers are positions in this - 23 bytes long - block.)

0: The status. Single bits are used:
D0: The file is protected.
D3: Block in directory is used.
D4: The file is erased (block in directory is free).
D5: Flag for a subdirectory.
The status equal to zero means the end of directory.
1: Sector, where is the first Sector map of the file.
3: Length of the file (3 bytes - not for a subdirectory).
6: Name and extension (11 bytes).
17: Date and time in the same format as "DATER" and "TIMER".

The first block is different; it contains an information about the
directory itself. When you want to read or write this block using BW-DOS,
you must use the POINT function - every OPEN in direct mode will set the
file position to 23.
The information in the first block is this:

1: Sector, where is the first map of parent directory.
3: Length of the directory in bytes (3 bytes).
6: Name of the directory (8 bytes).

That's something I'd like too.. is there any chance this could be put
up on the net somewhere?

John, that sounds like quite a large task, and the result can be of benefit
to the entire community. Any chance OHAUG can exchange something for it?

My sentiments exactly. I know this is off-topic, but if anyone is an MS Word user, try the following:

1. Start MS Word

2. Type, "Bill Gates is unable to follow directions."

3. Highlight from the word "unable" to the end of the sentence.

4. Bring down the Tools menu and select Thesaurus.

5. Look at the suggested replacement for the phrase you just highlighted.

I couldn't resist.

You must try to get the slime out of the middle. Make paths with the bricks
(or whatever) to lead the slime out to dispose of it. Lightning will break
your paths and on the higher levels, it gets quite frantic. Hope it helps,
but it's just from memory (haven't touched it in 10 years or so)

Take Atarian care

1147. Atari XF551 disk drive/IBM 5 1/4???

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-18 00:00:00 UTC
From: jrick2000@aol.com
Message-ID: <1998071819415200.PAA14615@ladder03.news.aol.com>
Source record: 61310

Can a IBM 5 1/4 disk drive work with the power and I/O port in the Atari XF551 disk drive case?

I still have my Atari XF551 drive; and I looked inside to find that the drive looks very similar to an IBM drive except for the power connectors and I/O cable The power connecters are colored: (2) blacks, (1) red, and (1) blue. Though, it has the same number of power plug connections. The other questionable part is the I/O cable which seems to have all the same pin connections like an IBM cable; and it does have one end colored red. Though, I am still not sure the IBM would work with this setup if I decided to replace my Atari disk drive.

I only wanted to know if in the event the Atari drive failed I could replace it with an IBM drive.

1148. Atari800win 2.2 / Game Compatibility????

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-18 00:00:00 UTC
From: jrick2000@aol.com
Message-ID: <1998071820032900.QAA04094@ladder01.news.aol.com>
Source record: 61311

I have tried some games with AtariWin800 2.2, but have not figured a way to get them to work. Though, I do like how it notifies me that a program has bombed. However, this is the problem I have with the emulator. How do I really know that this game is corrupted (a bad download) or its a problem with the emulator not working properly with these games??? This means I will have to try different internet boards to see if a specific program will work better than another. Yet it may all be the emulators fault!!!

So the question is whether or not if some of the games that are on the internet really are corrupted or its really a problem with the emulator(s)?

Though, I have not tried other emulators, but I sure would like to get some input on this subject. It would save me the hassle.

Some games I have had difficulty with are:

Jupiter MIssion 1999 (atr)
Infantry (atr)
Zombies.exe
Mig Alley Ace (atr)
Temple of Apshai (atr)
T-34 (atr)
Telenguard (atr)

Thanks,
-JR

All of these either need basic or basic on and the sio patch turned
off...

Only T-34 has major probs...

Try turning basic on via the cartridge heading with the hold option bit
non ticked. Try diff op sys's ie if not under 800B mode try 800XL mode
with basic enabled.

SIO is under hardware...if it bombs reboot...it seems to be a thing with
Atariwin at the mo, reboot with the same options and it works better ???

Zombies works fine BUT it needs to be played as Realms of Impossibility
to really enjoy the game as thats the full release version..no basic tho
:)

I used to have a long time ago a Suncom joystick that hooked up to any of: an Apple II, C-64, Atari, PC, etc. Apparently converters used to exist, how you can find them is another story...
But, if you look at the serial port on the back of your computer, funny thing that it is, the Atari-style joystick seems to fit perfectly into the serial port. Now if someone would only get a working driver so that you can use it (I am currently working on one, but need the technical specs (pin layout) for the Atari-type joystick port before I can seriously get to work).--Hackmann

An IBM drive will work in your XF551 as far as all the wiring in
concerned. Be careful, though. The XF551 drive is a low power drive.
Some old IBM drives have things like head-load solenoids and or high
power steppers and motors. You have to make sure you don't overlaod the
XF551s power supply. It won't melt, but you will get thermal shutdown
and erratic operation.

>ea shipping encluded...has video and audio..

I believe your cable is a standard(composite) video cable, the kind that works
with VCRs. RGB output will only work with an RGB monitor because the RED,
Blue, and Green info is on a seperate lead. Luminance is only the brightnessn
, and chroma is only (all three signals) color, composite is both.

Since I've been using Compuserve and Delphi for about 15 years, I've been able to send/receive email quite easily just using a plain text terminal program. Since CIS has gone special, I now use Delphi for most of my email(including newsgroup posts). Compuserve is my main www gateway. I spent a little time with the tcp/ip stuff on the ST, and found it so far behind the PC that I dumped it all. I wouldn't even think about it on the A@, but someone will/has tried I'm sure. I'd think that much of the protocol could be eliminated on the A8 because its for the ability to communicate in a variety of methods to the applications that use it. Streamlined might work, but still complex.

>Atari-related GIF's. I've never run into this before. Any suggestioins on how
>to extract the GIF's from the text? W98 insists on treating it as text.

The text has to be run through a MIME decoder. I'd be suprised if windows or any
browser would do it automatically. Same for UUencoded files. I take the text
file and run it through a program I have on the ST, ESSCODE, that works only
fair.
I use a different program for UUencoded files that works much better. Eventually
I'll find programs for the PC.
I do have a UUencode/decode for the A8, but not a MIME.

The XF551 has brackets that fit the case, if you remove these from your presant drive and obtain a Double Sised Double density IBM disk drive, there is no reason you can not replace the drive with an IBM compatable drive.

Howdy !

I still wonder my self why APE 1.15 won't work under Warp4. It seems to be a mystery. APE runs perfectly up to the point when i'm selecting a ".atr" file. I contacted Steve Tucker but he didn't tested APE with any Warp version. I'm sure it doesn't worked well under warp3 too. So the question is, why?!

Or are there simply some dos-application changes needed?

I remember a game called WAR that was made by Adventure International/ Scott Adams. The game puts 2 players in a one screen game where they are looking birds-eye-view at the military units. Each player would take a turn and make a decision on how to use their units. The player would be in control of infantry, tanks, bombers, and planes. The game was quite simple but real fun.

If anyone knows what I am talking about and/or know where I may find this game please let me know. Thanks.

I remember this game, too. I'm afraid I don't know where the image is but I recall the cassette came in a polystyrene page-like box which was annoying because the tape kept on falling out because the polystyrene got broken. I also recall that for some reason mentally labelled it the worst in my collection, although I do not recall ever playing it and I like Scott Adams other adventures.

Best, Alan

Message-ID: <35b1d3a3.16356994@news.demon.co.uk>
Source record: 61322

Greetings all,

Some of the older UK Atarians may remember Atari User magazine -

I've just spotted what the former editor has been promoted to:

<URL:http://www.lboro.ac.uk/departments/dils/staff/cmcknight/cmcknight.html>

Congratulations Cliff! - just shows the calibre of Atari people...

On another note -

I've loads of tape games and utilities for the 8-bit, but never bought
a floppy drive or hard disk. Has anybody experimented with using
something similar to the printer driver that communicated through the
games ports to a two-way parallel port on a PC so that an ASCII
version could be uploaded - and either saved or possibly run in an
emulator.

Also -

I just dug out Galaxians after about 10 years - I'm sure they've been
breeding whilst there's not so many people out there killing them off.
Or maybe it's just me getting slower in my advancing years :-)

M
If you want to reply then it's not a "not" it's a net!

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

SArcher119 wrote:

> if you had an atari in the good old days you would not be asking such a silly
> question .. go away you lamer

SArcher,
This is an Atari 8-bit newsgroup and SpartaDOS questions belong here. That was a legitimate question. We welcom anyone that is interested in Atari 8-bit computers here no matter what there interest level is. Please realize that there are new-comers here and people that never got deeply into OSes and disk format information. If you don't like such questions then maybe you should not read this newsgroup.
I like questions like this, because they show a real interest in this system. This person is looking for serious information. Instead of calling him a lamer, why don't you try looking up the information and respond appropriately. Thanx for listing!

JRick2000,
Physically, a PC 360K 5 1/4" drive IS what is used in an XF551 drive. The
difference is in the drive controller electronics (Atari circuit board found in the
bottem rear of the XF551 case). Hope this answers your question.

LWhite,
Are the images viewable in a PC/Mac browser or do they show up as a bunch on gibberish characters. If it is the latter, the file is probably UUEncoded not a mime base64 attachment. Copy off the scrambled block into a file then run it through a UUDecoder. This will create a (hopefully) usable file which couyld then be copied to you 8-bit to view properly.
If you can view the images in the browser or save the attachment as a file, just do that and copy off to you 8-bit system.

> If one wishes to connect his/her Atari 800-130XE computer to a RBB
> monitor. I have a few cables left that will do the trick. Price $5.00
> ea shipping encluded...has video and audio..

You have cables for $5 that will connect an Atari 8-bit to an Atari
SC1224 monitor (which was the monitor the originator of the thread was
asking about)?

Keep in mind the SC1224 is an analog RGB monitor, not composite.

[NOTE: my news-server seems to be having some problems, so if
this appears more than once, I apologize -- MJN]

I have just added a new section to my web site:

The Video Game Advantage Definitive Known Software List Collection

If you are looking for the most complete, detailed software lists
available you have found them. And the best part is that they are all
in a standardized format, so you can change system files without
having to learn a new style or format! Currently 32 of the 40 planned
files are on-line (2600, Intellivision, NES, Odyssey2, Sega CD, SMS,
SNES, and TG-16 all still need some work, and will be on-line as
soon as possible).

32 bit and 64 bit video game systems:

3DO REAL Interactive Multiplayer
Amiga (?Commodore?) CD32
Atari Jaguar / Jaguar CD
Nintendo 64
Nintendo Virtual Boy
Sega 32X
Sega Saturn
Sony Playstation
Tiger Game.Com

16 bit video game systems:

Philips CD-i
Sega CD
Sega Genesis
SNK Neo Geo / Neo Geo CD
Super Nintendo

8 bit video game systems:

Atari Lynx
Nintendo Entertainment System (NES)
Nintendo Game Boy
Sega Game Gear
Sega Master System (SMS)
Turbographx-16, CD, & Duo

Classic video game systems:

Atari 2600
Atari 5200
Atari 7800
Bally Astrocade
Colecovision
Emerson Arcadia 2001
Fairchild Channel F
GCE Vectrex
Magnavox Odyssey2
Mattel Intellivision
Milton Bradley Microvision
RCA Studio II

Classic computers:

Atari 8-bit computers
Coleco Adam computer -- see Colecovision
Commodore 64 / 128 computers
Commodore Vic-20 computer
IBM PC Jr. computer
Mattel Aquarius computer
Radio Shack Color Computer
Texas Instruments TI 99/4A Computer
Tomy Tutor 16-Bit Graphic Computer

*****

If this is of interest to you, the URL is:
http://www.io.com/~vga2000/

and the link is in the "Collectors Corner" section.

And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

Michael

P.S. My old e-mail accounts all still work, but I'd prefer it if
people would begin to use the *new* account. Thank you!

NOTE: If rec.game.video.classic holds true to form someone
will follow up my announcement with lies and/or attacks. I left
that newsgroup approximately 2 years ago, and except for 2 days
in August 1997, I haven't read or posted there since (unless it was
to cross-post an occasional web site addition announcement or,
when I still did so, to occasionally cross-post four -- not 6 -- FS/T
lists).

However, I still receive e-mail from people who tell me that some
there are STILL talking about me. Very touching, now grow up!

For the record, I will continue to cross-post these types of
announcements there because the vast majority of the people
on RGVC probably enjoy video game related activities more
than the RGVC tradition of seeing how far you can stick the

"verbal knives" into someone.

If you are tired of wading through the lies and attacks here on Usenet, and you would like to know my real position (on anything), as opposed to what some with tell you is my position, then you should either pay attention to what I say (or have said), or you can ask me. I'll be happy to detail my TRUE position for you. :)

I can't comment on putting AC on the Web. I have neither the time nor
the ability. Of course, maybe it is easy?

The last issue was N0.7 from July 1997. I stopped putting dates on them
since they were mostly meaningless. Next issue is No.8.

Not hard, if you have a flatbed scanner and the right software, which I do!

If you ever want to put AC up on the web just get me the mags, I even have
web space at my site I can volunteer for the project.

Oh, on this note... while I won't bother to detail Mr. Novak's bad
business practices, a factual comparison of two links should show you
what caliber of person you are dealing with:

Novak's 7800 cart prices:
http://www.io.com/~vga2000/fsort/a7800.lst

O'Sheas 80 cent 7800 carts:
http://www.oshealtd.com/

Caveat emptor... now you have some insight as to why he might have a
bad reputation on a classic videogame newsgroup.

1189. Atari800win - no full screen?

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-20 00:00:00 UTC
From: gmoran@my-dejanews.com
Message-ID: <6ov5je$30h$1@nnrp1.dejanews.com>
Source record: 61203

Hi all,

I'm having problems getting Atari800win to work full screen - basically it doesn't allow me the option to set a fullscreen mode (these modes are greyed out - only the two windowed modes are available). This happens in both GDI and Direct Draw modes.

Am I doing something wrong? Machine has Win95 OSR2 with DirectX 5 and a Diamond Viper V330 (Riva 128) card with the latest diamond drivers (0127). Desktop is set to 1152x876 in 16-bit colour.

Cheers,

Gavan

Thanks for the info...

My final solution was to use Disk Communicator to transfer the disk onto an ATR disk image, then to use ImageMan to extract the DCM file to the PC, then to use DCMTOATR to uncompress it into an ATR file of its own. Worked beautifully!

I've done this with quite a few other disks of mine, including a cheesy hangman game I wrote back in high school in BASIC, that I later converted to Turbo Basic XL, and a musical terms multiple choice program that teaches musicians what all those foreign words mean above the staves -- it even say's "That's it!" when you get it right (it even talks under Atari800win 2.2). I hope to put all my personal goodies on my website soon for everyone to download (no, I haven't posted the URL for it yet, just hold tight). More info on that later.

Again, thanks to all who helped me with my problem,
Steven

> Net-Tamer V 1.08X - Test Drive

All I've seen in the archives so far are .ATR images that have been
ARC'ed (!) and G-ZIP'ed... Maybe it's just me, but wouldn't it make
more sense to ZIP disk images since the fact that they're images to
begin with implies that they're meant to be used with emulators? Didn't
anyone think what kind of gyrations most folks would have to go through
to get a usable image file?

Now, if SpartaDOS was a .DCM file that was then ARC'ed, I could see that
for the faithful that still use 8-bits.

(wiping the foam from my mouth...)

:)

I'm not a TCP/IP programmer, but I know enough to know how its encapsulation works, and it seems to me that the A8's could do it with some kind of proxy system (running through APE or SIO2PC or something like that), maybe with some kind of new, simplified protocol, then let the *other* computer do the TCP encapsulation/de-encapsulation. It just seems like it's much easier to have the A8 make a TCP/IP request, then let the proxy computer worry about how to get the info (why reinvent the wheel, right?).

Anyway, it's an idea.

Tricky dialog boxes, nothing more... UNCHECK BOTH BOXES and you'll get your fullscreen options. Rich probably could make this a little clearer very easily. You may want to send him some personal e-mail asking for this change (he's a nice guy, and will most likely oblige).

Have fun!

Greeting, my A8-bitting friends!

I may have to leave you all for a while. I've just accepted a new job as the Network Administrator at Pardee Hospital in Hendersonville, NC. They currently do not have dedicated internet access like my present company does, so until I can pursuade them to pay for a dial-up account for me, I won't be able to post here very often. I do have a PC at home that I will use from time to time to check up on things, but with 2 young children at home I don't know how often that may happen. I will try to get back on-line as soon as possible, and (of course) I will let everyone know as soon as I get back.

In the meantime, I've decided to go ahead and post the website address for the work-in-progress site I started a few months ago:
http://www.fortunecity.com/skyscraper/adaptec/304/

Please bear in mind that I didn't really want to advertise this site while it's still in its infancy, but I thought I'd go ahead and let everyone see the direction I'm taking with it.

I hope to see everyone on-line soon,
Steven

After asking a quite reasonable question about the SpartaDOS format,
a person called Sarcher119 at Annoyer On Line dot Com wrote:
-=> Quoting Sarcher119@aol.com to All <=-
Sa> if you had an atari in the good old days you would not be asking such
Sa> a silly question .. go away you lamer

Ah thanks! This is a reply which really helps me understanding the
SpartaDOS format.
Besides that, you were able to determine what I own based on the
question I asked. Pretty nifty I must say.
Even better, based on that simple question you could conclude
that I am a lamer too!
Let me guess, you're Columbo right?

I've been teached that there is no such thing as a silly question,
and that there are only silly answers.
To set matters straight I do own every type of Atari computer ever build,
up to the 1450XLD. As a true Atarian like yourself (and a non-lamer),
you can say the same of course.
I for myself fail to see what such "owning" has to do with SpartaDOS
or being a "real" Atarian.
If being a non-lamer means answering in a non-intelligent manner,
insulting people, and pretending to be a know-it-all,
I'd rather be a lamer, thank you.

Thank you, "helper" of the Atari community,
Your humble lamer Bo.

>Funny though, that only those 2 games are affected (that I know of).

You know, there was an older game - I believe it was Return Of
Heracles - that when booted asked you to select which type of Atari
you had; CTIA or GTIA. If you didn't input anything then it went ahead
and booted up as if you had the newer component.

At least, if I remember correctly...

Hi,

A few years ago a purchased a BlackBox.
Since it's a SCSI device.

Does somebody have written a device driver for CD-ROM players?

I would go for a complete port of the OS with processor emulation for
legacy programs.

>> new and based on a outside developed kernal like BeOS, or Mach. This you
>can already
>
>The kernal will "borrow" parts from other OS's, a lot of the features of
>workbench will be retained and enhanced further.

This upsets me. The Amiga kernel is central to its efficiency and
general behaviour. Using another kernel will make it somwething else
than an AmigaOS.

>> be done under Linux. It will not include a Motorola CPU, it's probably
>going to use
>> intels comming Merced chip, or something else shitty. The "new" amiga

Thanks for the tip. It's great to have a windows compatible emulator. I
love XLit but sometimes booting to DOS can be a real pain. Playing all those
old classics again is a real blast from the past, especially since my real
800XL is acting very weirdly indeed. I suppose I could always dig out the old
48k 400 though.......

I bought some VIC-20 carts from VGA last year, he sent them to me in Australia
without a problem. If his price seems steep, there's plenty of noname auctions
to try your luck with on rgvc.

> --

To a newbie, ALL places are 'noname'... to date, I have never had a
problem when
dealing with 'noname' auctions here on rgvc. In fact, I've met more with
more
courtesy when dealing with 'noname' auctions than dealing with actual
retail shops.
All with better prices. All with the possibiltiy of negotitation and
trade. I'm
glad you had a good experience with VGA... and testimonials like this
help ng readers
decide who to deal with. The addition of that attack on auctions was
unnecessary.

For the record, the only reason I've never bought anything from VGA is
that
the prices are higher than I'm willing to pay. I also think that the
explantion for
the pricing is a bit too arrogant... this opinion, on the other hand,
should not
be construed as attack on the integrity of VGA.

It may look the same, but it won't work! It should be obvious once you get
the pinouts for the IBM serial port and the Atari joystick port.

Hi everyone,

The following items are FOR SALE, no this is not an auction, just straight sales, all prices are FIRM, not interested in trades unless its something by or for Atari and is not a common item. Mostly interested in BOXED items, not loose, boxes must be in MINT condition:

Starpath/Arcadia Supercharger, BRAND NEW and SEALED in original box with Phaser Patrol game: $25.00

Starpath: Escape from the Mindmaster, BRAND NEW and SEALED: $18.00

Starpath: Suicide Mission, BRAND NEW and SEALED: $15.00

Starpath: Killer Satellites, BRAND NEW and SEALED: $18.00

Coleco 2600 ZAXXON, BRAND NEW and SEALED: $10.00

Coleco 2600 Donkey Kong, BRAND NEW and SEALED: $10.00

Parker Bros 2600 Spiderman, BRAND NEW and SEALED: $15.00

Parker Bros 2600 Empire Strikes Back BRAND NEW and SEALED: $12.00

Parker Bros 2600 Return of the Jedi BRAND NEW and SEALED: $12.00

Parker Bros 2600 Strawberry Shortcake BRAND NEW and SEALED: $20.00

Atari Ms. Pac Man doll (about 6" tall) : $10.00

ATARI T-SHIRTS: All shirts are brand new adult large:

Atari T-Shirt: (Beige) Has "ATARI" in center with characters and scenes from various Atari video games: $15.00

Atari Pac Man T-Shirt:(Dark Blue) $15.00

Atari Defender T-Shirt: (Khaki) $15.00

Atari Yars Revenge T-Shirt: (Dark Purple) $15.00

Atari Berzerk T-Shirt: (Grey) $15.00

Sales are ONLY within the US and CANADA, payment by money order for immediate shipment, checks will have to clear. Shipping is via USPS priority mail.

Email to reserve item(s), payment must be received within 5 days of reservation or item will be made available to next person.

Curt

Hi,

I looked at it but can't figure out how the 6522 (VIA) is running the SCSI
bus....

I think you have to take a look at HDFMT191 or later for a clue, because
that software includes a command to read out the SCSI Harddisk info, when
that is possible a read from CD could be done too, but the disassembled code
was over 40 Kb!!!

Gtx,
Sysop*TXG

One of the first big MiNT distributions, the TAF-kit, came with X11 as default GUI. It works nicely on a 4meg ST. But lemme get this discussion straight, so far the line was that an Amiga can do anything an Alpha can do in Linux because an Amiga will run Linux as well, but that this doesn't go for Ataris because MiNT isn't fully Linux compatible? Are we forgetting that Linux will run on an Atari as well? (And, again, that X will also work under MiNT).

Maurits.

It may not necessarily go for MiNT.

That does not address Atari in general.

A Falcon will quite happily run Linux and could
quite happily contribute to a D2 render farm
right beside an Ameboa, an Alpha, a Sidewinder
or any other supported platform...

>run on an Atari as well? (And, again, that X will also work under MiNT).

> The power supply is what worries me. This wont destroy the XF551 board and
> power supply components I hope?

You might want to consider wiring up a standard PC power supply (which some surplus electronics places have for as little as $10 + shipping) or any switching power supply that provides 12 & 5 volts. To avoid having to keep the 9VAC brick to power the interface board, someone could likely provide the info for bypassing the internal rectifiers and wiring the new supply up directly to the controller, bypassing the rectifier circuitry on the board.

That said, as long as you use a relatively modern 5.25" direct drive mechanism, you should not experience any more power problems than with the standard mechanism.

> Another thing, another person which I forgot the name of mentioned that I need
> a 360K drive. Is that true or will a DSDD work?

A DSDD 5.25" drive *is* a 360K drive.

I'm hardly a newbie, I've been a sniper on RGVC for a few years now. I have purchased carts from a few US auctions and had them sent to Australia without a problem, as well as VGA. A few traders (notably SteveR, who gives good value) are firm on their prices, but they are known entities. This counts when you're trading from other side of the world.

For the record, I didn't attack auctions, I attacked the plethora of traders that pop up on RGVC, with the "Warning: bad trader!" postings that accompany them.

> be construed as attack on the integrity of VGA.

I feel the same about his prices, the only reason I bought off him was he had a VIC-20 programmer's reference guide which I wanted, and I decided to tack a few items on the order. BTW, I found Michael to be polite and prompt with his correspondence. The only reason I piped up is that he posted legit, and was flamed unfairly.

Source record: 61241

Slime is an excellent 400/800 game! Need the Translator for Xl/XE machines.

Anyhow,
You need to build a path where the slime falls into the sewers on the left and right hand side of the screen. Lightening and the 'saucer' will destroy your 'triangles'(forgot the name). You only have a certain number of 'triangles' you can put up on the screen. There is a counter near the top telling you how many you have left. You need tokeep the slime from getting to the bottom or the level of the ocean getts higher hence making it more difficult. You can destory the slime drops but putting your crosshairs over them and shooting.

Enjoy.

I know that two people can have vastly different experiences with a
trader... it
all depends on how you deal with that person, your attitude, mood,
etc... I have
also added my 2 cents when someone I have traded with is flamed... I'm
glad you
felt you had a positive enough experience to come to MJN's defense... =)

Looks right.

> Is this true on ALL Atari computers?

It's true for 400/800/800XL and should be for 1200, too.

> How are the X,Y locations figured
> out? Is there a program in ROM that puts the values in these memory
> locations, or is it a HARDWARE function?

If you're in need of this for the reason I _think_ you are, you're not going to be happy. You're going to have a HELL of time trying to make an /|\ light gun work on a PC.

Here's how it works:

You know the Atari knows its VBLANKs, right? Well, it also knows its HBLANKS. Same concept, only they happen a lot more often (end of every scan line). The light gun worked by letting the computer know exactly WHEN it "noticed" there was a scan refresh at whatever point it was aimed and the computer did some quick calculation that basically said, "Aha! The gun picked up the scan refresh at 49ï¿½sec during HBLANK 117 of this VBLANK period. There's only one pixel it can be pointing to and that's at point XX,YY."

Neat trick.

It's pretty much how most light-gun games still work. In arcade machines even today, you may notice a flash of "white" which is a reserved colour. Gets drawn only when the trigger is hit. Whereever the gun is pointing when that colour BECOMES visible to the gun (your reaction time is a BIT slower than 33 1/3 msec.) is where it must be pointing.

Source record: 61244

I posted a couple weeks back that I can offer the space and do some of the work but all I got were a coupe of notes saying what a good idea it was.

I want to build an 8-bit Atari reference site with the complete technical information. I need help with this... LOTS of help. Basically, it means scanning in and error-checking the following:
source code for the OSes
De Re Atari,
Mapping the Atari
BASIC source code & Ref manual
Atari Hardware Reference Manual
...and any and all other similar materials.

These do not have to be converted to HTML. Sooner or later someone will come along and do that. What we first need is to build a central repository of this information and in order to do that we need people willing to spend the time doing it.

What I've proposed is basically Belling the Cat -- everyone thinks it's just the greatest idea since four-voice polyphonic sound, but no one is willing to help DO it. I'm not expecting to make any money on this (I *am* expecting to lose some though, just like my Official French Fries Pages). It will be freely accessible to ALL.

If you have ANY reference materials, PLEASE PLEASE PLEASE help out. You can E-Mail me directly at bad_doggie@hotmail.com and you should CC: it to atari@select-ware.com .

cheers-

m w grossmann

Hi
I have been having trouble looking for web sites with info on the SIO2PC cable and if it's compatible with a 400 and what exactly can I do with it.
And info would be greatly appreciated.
I was an original 800xl owner in 85 an am looking forward to getting back into some classic atari games.
Thanks
Mark

He wasn't flamed unfairly, I posted factual information. If you had the same experience I did with him, you would have probably been less kind. Let's just say I decided to stick with the facts instead of getting into the ugly details of why people shouldn't deal with this guy. Besides, when he takes every opportunity to snipe at r.g.v.c. then should we sit back and pretend everyone here is an ogre and he is the good guy? I'm not about to endorse that fairy tale...

(About APE working with os/2 warp3/4)
I don't think APE works with any multitasking OS. The timings
are critical to the function of APE. It is a FAQ, and answered
in the APE documentation, tho can't say as I read the answer
because I think/thought the answer was no. APE may work
in DOS mode with win95, I dunno, probably need to read the
APE FAQ/doc. (Just read the ape116.doc). Now I'm expert.
Says what I said. Says with a really fast intel machine,
it might work in command prompt only mode, ie. re-boot
to run ape. Personally I use my DOS partition most of
the time, and probably not many people can chose what
os to run at bootup. I'm not using LILO, but I do
have both DOS 6.22 with Win 3.1 and Win95 on the
same hard drive. etc. etc.

Source record: 61249

(Asks some info about playing games and stuff).
I just played Crusade Europe and only remember I didn't like
the logic. I attacked from three sides and the program
takes each attack sequentially, as tho each division attacking,
the other two just twiddle their thumbs.
Uhm. Pick a scenario first, then enter secret code (maybe
this is removed on cracked ones), then joystick to move
cursor. Press fire while over a unit and see statistics
for that unit, press fire again and you get a menu of
what to do, for instance move, attack, defend or go
into reserve. It's fairly simple, like above. The
program constantly goes on time and will execute your
commands itself, when it gets around to it.

Bismark:
You pick a scenario. Say OK, Then set speed level and then
start game. The moveable white square on the map is the COM BOX.
Move it with joystic to any icon. Move icon over a ship,
get the status. I never played this, I'm reading the book.
Bismarck is diamond, Battleship is a partial F. Carrier
is a square, cruiser a triangle, light cruiser diagonal
line, convoy four squares making a square. airbase, anchor
is a port. ship with flag is admiralty. dots are mines.
Gees. I should quit, the instructions are for C=64 even
tho I have the A8 version. Lemme see, you got a search
function.

Say, did I tell you I like 'Midway Battles', it is
playable. And pretty obvious, no instructions needed.
Russ

> hHanks

There are in fact 5 Select-Signal on the CAR-port

S4
S5
RD4
RD5
CCTL

CCTL (cartridge-control goes low, whenever an adress in the area
$D500-$d5ff is selected.
S5 ties low, when an adress between $a000 and $bfff is accessed
S4 ties low, when an adress between $8000 and $9fff is accessed

the cartridge should ground RD4, when RAM between $8000 and $9fff should
not be selected by the MMU (f.e. when it wants to place own RM there), RD5
is similar with the area $a000 and $bfff

Thats all

Matt

Yes, it's compatible with the 400, and it allows you to stop using your floppy drives and Atari printers in favor of your PC hard drive and PC printers! It does a LOT more, too, so get all the info you can.

You can get the schematics for the cable at http://www.hackerz.com/atari/sio2pc.html which gives you the Radio Shack parts list to build it yourself for about $6 (some people charge as much as $50 for a completed cable),
and you can go to http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/ to get the SIO2PC program which has all the info you'll need about what it is and how it works. Get s2pc410.zip -- it's the latest version I know of.

Build the cable, plug it in, boot up and have fun!

Well, I told everyone before that I would be away for a while, but it looks like I'll be getting an internet connection at my new job after all, so I should be able to keep up with everyone with no trouble.

I also wanted to let everyone know that I transferred my "A" ROM from my 800 the other night using a program that David Firth sent me. It worked like a charm, but when I tried to use it under Atari800win, I got the message that it didn't pass the CRC check. I have a feeling that it has something to do with it being a GTIA 800 and not the CTIA version. It still works, of course, but it did warn me about the CRC.

For those who've kept up with my ranting about Lode Runner not looking right on the XE machines and emulators, the answer was not in the "A" ROM. The colors were still off on Atari800win. I must assume, then, that it really is an artifacting problem. In fact, if you switch to Artifacting Mode 1 in the hardware setup on Atari800win, that's pretty close to what it looks like on the 800. Seems that Rich had already taken that into account. My apologies to everyone who had it right when I was wrong. I'd love to hear from anyone who might know how to make an NTSC 130XE do the artifacting the way the NTSC 800 does it.

In any case, I now have the Atariosa.rom file. If anyone has an 800 and wants to know how to transfer the ROM to disk, let me know and I'll send you the instructions. It's pretty easy, actually, if you've got SIO2PC running.

Come Monday, the 27th, I'll be getting oriented at my new job, and if anyone wants to drop me a line, you can reach me at stevenposey@usa.net

Play On!
Steven

1252. Need help finding a BASIC game

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-23 00:00:00 UTC
From: Steven Posey <sposey@ioa.com>
Message-ID: <6p7r2a$4g5$1@supernews.com>
Source record: 61266

I remember a BASIC game that was a Lunar Lander knockoff. I believe it was called Jupiter Lander, and it let you pick which one of the moons of Jupiter that you could try to land on. The moon determined how rough the terrain was (i.e. Europa was flat and Io was really jagged).

Does anybody else remember this game, and what are the chances of finding it anywhere now?

Thanks,
Steven

1253. Level 9 Computing

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-23 00:00:00 UTC
From: ViZ <ViZ@no_spam.lupus.waw.pl>
Message-ID: <35B7790E.8F32F7E6@no_spam.lupus.waw.pl>
Source record: 61267

Hello,

There was such a company, Level 9 Computing, which produced superb text-adventure games for, among others, Atari 8-bit. I have one, but very important to me, question:

I've found this web page with L9C's products history:

http://www.lysator.liu.se/adventure/Level_9_Computing.html

According to it, there were three trilogies of text-adventure games from L9C:

1) The Jewels of Darkness (Colossal Adventure, Adventure Quest, Dungeon Adventure)
2) The Silicon Dreams Trilogy (Snowball, Return to Eden, The Worm in Paradise)
3) The Time and Magik Trilogy (Lords of Time, Red Moon, The Price of Magik)

This web page says that ONLY THREE games were available for Atari 8-bit: Snowball, Return to Eden & Lords of Time. It's a big mistake. I have original box of first trylogy (containing three tapes) and now also one *.atr file for emulator. This same is about second trilogy. My question is about the third one. I've never seen original box for this trilogy but I've found one *.atr with Red Moon adventure - what about two others? Lords of Time and The Price of Magik? Do they really exist in Atari 8-bit version? If yes - where I can find them? Or maybe someone has this trilogy in one *.atr file?

Does anyone can help me? Thanks in advance.

1254. FA: Atari 8-Bit cartridges, boxed disk games

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-23 00:00:00 UTC

Minimum bid on each is $1, no reserve. For a picture or to bid, please follow the appropriate link:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=22164752

Here is a package of 9 different Atari 8-Bit cartridges with one manual and a bookshelf style holder with a 12 game capacity. The titles are: Centipede (silver label with manual), Caverns of Mars, Asteroids, Missile Command, Space Invaders, Star Raiders, E.T. Phone Home, Pac-Man, and Master Type. Buyer prepays plus shipping. Thanks, Alex.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=22165524

This is a bundle of disk based software for the Atari 8-Bit line of computers. Titles include: Broadsides, Hardball, Zaxxon, Crush Crumble and Chomp, Super Huey, and Flight Simulator II. Each title includes the box, and each has the manual except for Hardball and Zaxxon. I will also throw in the manual for Kennedy Approach and the disk for Target Practice since I have those lying around as well. Buyer prepays plus shipping. Thanks, Alex.

>time.

There was me thinking, "yes, this *was* a good show last time I went - I have to make the effort to go to this one, but this is a bit off topic for comp.sys.amstrad.8bit." (where I read it).

Then someone with a response comes up with that missing ingredient (a monster pub crawl) which would enhance the after-show revelries of the CPC club's get-together at the end of September (to which *all* 8-bit users are cordially invited, *with* their own preferred computers) and suddenly I don't feel like grumbling!

I'll post more details of the CPC users' "do" a bit nearer the time, but the invitation is there to any 8-bit enthusiast who can make it to the Bescot footy stadium, Walsall, England on Sunday the 20th of September 1998.

Further details from 8bit@spheroid.demon.co.uk

Perhaps I *will* have a small grumble; please post follow-ups only where they're relevant.

Message-ID: <WV7u1.178$_3.3415072@storm.twcol.com>
Source record: 61088

I have an old 800xl and a newer one and they both display artifact colors
differently.
Maybe there was more than one version of the GTIA chip. The display was
shifted
one color clock (1 graphics 8 size) pixel in the GTIA to make the playfield
in other
modes line up exactly. On Mr. Do the colors are backwards (at the top and
bottom of
the screen) than what they should be on the older 800XL.

Thank you for your reply.

The two "real" apps which came with Diamond GOS 3.0 were "Diamond Write" and "Diamond Paint". I think I was having a brain spasm (or wrestling with my 4-yr. old storm-god-in-training while authoring that post) because I meant to ask about ".acc" or accessory files. These were the kind of thing that "supposedly" anyone with at least one hemisphere of grey-matter and OSS A+ or MAC/65 could've written. Someday I'll get my hands on MAC/65 and probably cook up some of my own just for grins.

If it is an original, mail it to me and I will incorporate the CRC. It is likely the A-Rom I was working from originally was modified in the first place, so that's why it would not agree.

> For those who've kept up with my ranting about Lode Runner not looking right
> on the XE machines and emulators, the answer was not in the "A" ROM.

ROMs do not determine the colors produced by artifacting. It's tied in to how the TIA chip is working, and therefore changes (because they are one clock-cycle out of sync) between CTIA and GTIA.

> is an artifacting problem. In fact, if you switch to Artifacting Mode 1 in
> the hardware setup on Atari800win, that's pretty close to what it looks like

+-
+-Well it wasn't me, but I can (and used to, before I got my university
+-account) do that. When I'm at home all my internet access is via my
+-Atari (a 65XE). Reading from and posting to usenet and this group is
+-do-able, as is e-mail and www (via Lynx). With free local calls then
+-reading and posting to usenet isn't a problem (unfortunately I have to
+-pay for local calls, so I tend not to do it 'cos it works out
+-expensive on phone calls). As has been stated
+-before you need a shell account (one with a text only interface) to do
+-it. You'll also need an 80 column terminal emulator for your Atari
+-(Ice-T or FlickerTerm 80) which are available at the archives. The
+-other thing you need is to know what programs are available on your
+-ISP for usenet access. Common program are rn, trn and tin, even
+-programs like pine and emacs can be used to read/post usenet. Try man
+-rn, man trn, etc. . to find out more about the programs.
+-
+-If you're reading on-line then modem speed isn't too big an issue (as
+-long as you ISP supports that speed), as you're likely to spend more
+-time reading the news than waiting for the next page to display. Of
+-course if you want to do any downloading, then faster modems mean
+-waiting less. I've got a 2400 modem connected to my Atari (well it talks
+-down the phone line at 2400, but modem to Atari runs at 9600), but
+-it's not a direct connect modem, it needs a separate interface. And
+-its adequate for my needs. I'll leave it up to someone else to
+-explain the different ways of connecting modems to your atari.
+-
+-
+-
Hi I have a 28.8k modem and on my 130XE w/ Puff BB parallel buss interface
it communicates @ 19.2k. This is the buss I/O speed maximum. Our local
communication Frontier Corp. will allow ASCII fo $14.95/ month. I haven't
signed up yet as I get it free at work thruogh the VAX.

Make sure *neither* of the Direct Draw buttons (down the bottom under
the res choices) have ticks in them, the one on the right most likely
does. Untick it and you shall have that godlike full screen 800x600
mode...

I'm looking for an atari-game which name I don't know.

The task was to steer a ball through a labyrinth with the mouse. The mouse controlled the direction and acceleration/deceleration of the ball.

Has anybody an idea of the name of that game and/or where to get it and on which atari it ran?

Thanx

Alex

Are you thinking of an old Electronic Arts game for the ST ? Marble Madness
? For the Atari 8-bit there's a better one, Spindizzy! I have no idea if
that's the one you are talking about, but ...

Take Atarian care

1280. Need help with my 130XE

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-25 00:00:00 UTC
From: vairxpert@killspam.hotmail.com
Message-ID: <35ba26b3.1250018@news.netnitco.net>
Source record: 61095

Last year I picked up a huge 130XE setup all new in the boxes for
$14.00, only problem was that it didn't come with any software.
Someone did send me a bunch of Antic public domain software which was
a good start but not really exciting. Every single disk out of about
60 works perfect.
Last night I picked up a ton of Atari disks at a thrift and most will
not load. All the OEM disks like OS/A+, SynCalc and Atari Writer Plus
work perfect. Most of the "homemade" disks will not load. Two of the
programs I would really like to get going are BobTerm or 850 Express
so that I can transfer files off my PC that I got off the net.
I notice written on the disk is MyDOS - DD. Was this formatted in
some sort of double density that my 1050 drives can't read?
I've also got the game load runner which loads fine up to the title
screen but when the game screen comes up its all trash, you can hear
the game playing and see pixels moving but thats it. I also have
another disk that loads a menu of games but when I select one it loads
for a while and then I just get a black screen. Is the 130XE not
compatible with certain older games?
One last question, a while back I picked up another 1050 drive that
has a toggle switch (maybe two) and several leds mounted on the front
of it. I haven't tried it out yet, any idea what all this extra stuff
is?

Thanks,

George Torch

1281. Atari Classics Mag

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-25 00:00:00 UTC
From: rldetlefsen@delphi.com
Message-ID: <JpXOL5c.rldetlefsen@delphi.com>
Source record: 61096

As a thought to holding up AC for unfinished hardware hack articles...
A lot of people might like to read about such things, but they have no possible way to create one themselves. Holding up a magazine doesn't do it any good. Many of the interested readers have moved on. Potential subscribers will now not subscribe until there is proof(through the publishing of many issues) of the mags stability, and thus the likelyhood that they are not wasting money. Authors have moved on to other things. Any work they created that was or was not printed is now out of date and would either need to be re-addresses or dropped. Advertisers to have problems. Dealers will hesitate to spend the money when they don't know if the ad will show up, much less when. The ones that do advertise will mostly be the hobbyist where real world sales don't mean as much. Ultimatel, few subscribers, authors, and advertisers(that still exist) will want to come back. This means a smaller less frequent magazine. In the Atari world, stability is of paramount importance. It is better to continue publishing something than nothing.

Hi,

I found my old 130xe after who knows how many years, booted it up and it all works fine :), couldn't believe it...

I've just spent a couple of days going through my old software, and have been inspired to back it up on my p.c. for a bit of security and posterity, I've read the post's with ref. to SIO2PC and emulators etc., but there's allot to chose from, is there anyone in the u.k. supplying these or who fancies giving me a hand getting going.

Also most of my small boot software is compiled onto single disks with varying non DOS menu systems :), wondered if these conversion programmes would cope with this or would I have to convert the files back to single disk.

rgds

Mark

p.s. been playing ballblazer, by lucus films, I'd forgotten how much fun computer games used to be ;)...

Atari Fans! Finally, a great Microsoft product that you can actually
use!

Guaranteed not to crash! (Although, it does burn quite well.)

Priceless!
(Slightly higher in Canada)

is pleased to announce the immediate availability of fine, handcrafted
writing paper:

100% Hand-made
100% Recycled
100% Post-Microsoft content

OK, not so fine actually. I'm just starting this and am learning as I
go - but it's getting better looking every batch, and is perfectly
useable writing paper - measuring approximately 8.5x11 inches.
Guaranteed to be 100% repulped Microsoft documentation and MS
generated printouts. Careless bugs (or features, in Microsoft
parlance) and the occasional dog hair (this is a *small* operation,
and my huskies like to help me with everything <grin>) included
free-of-charge if I happen to miss them.

This is the first in a series of Atari-related (and other alternative
operating systems, to a lesser extent) items that I will be making
available. I'll have information on these products up on my TDS
website soon. This is just an attempt to raise a small amount of
capital to enable me to pursue some grander projects.

Contact me for more information on the paper:

tross3@hamtel.tds.net

****
Atari authors/FAQ writers & Compilers - please contact me at the same
email address.

Thanks!

Terry Ross
P.S.: Sorry for the cross-post, any complaints please email me
directly, to prevent cluttering up the two Newsgroups.

Is Yogi's 8 bit archive gone for good? I've posted several
times asking for the url. I always get posts like "do a yahoo search".
This does not good because it just returns a two year old url. Several
people always reply with mirror addresses, but these usually come and
go like the wind.
Does anyone know the url for THE Yogi site or know of what
happened to it? If it's gone, does anyone know the url of a reputable
mirror that will be there for more than a day or two? Any help would
be greatly appreciated. TIA.

Sincerely,

Can't this be done under Win 95 ? I think it is just to start up the
emulator and run the game, then press PRINT SCREEN, press ALT+TAB and start
up the graphics program and press INSERT.

Hope it works, it does on most other things. Take care.

The Video Game Advantage Definitive Known Software List Collection

If you are looking for the most complete, detailed software lists
available you have found them. And the best part is that they are all
in a standardized format, so you can change system files without
having to learn a new style or format! Currently 32 of the 40 planned
files are on-line (2600, Intellivision, NES, Odyssey2, Sega CD, SMS,
SNES, and TG-16 all still need some work, and will be on-line as
soon as possible).

32 bit and 64 bit video game systems:

3DO REAL Interactive Multiplayer
Amiga (?Commodore?) CD32
Atari Jaguar / Jaguar CD
Nintendo 64
Nintendo Virtual Boy
Sega 32X
Sega Saturn
Sony Playstation
Tiger Game.Com

16 bit video game systems:

Philips CD-i
Sega CD
Sega Genesis
SNK Neo Geo / Neo Geo CD
Super Nintendo

8 bit video game systems:

Atari Lynx
Nintendo Entertainment System (NES)
Nintendo Game Boy
Sega Game Gear
Sega Master System (SMS)
Turbographx-16, CD, & Duo

Classic video game systems:

Atari 2600
Atari 5200
Atari 7800
Bally Astrocade

Colecovision
Emerson Arcadia 2001
Fairchild Channel F
GCE Vectrex
Magnavox Odyssey2
Mattel Intellivision
Milton Bradley Microvision
RCA Studio II

Classic computers:

Atari 8-bit computers
Coleco Adam computer -- see Colecovision
Commodore 64 / 128 computers
Commodore Vic-20 computer
IBM PC Jr. computer
Mattel Aquarius computer
Radio Shack Color Computer
Texas Instruments TI 99/4A Computer
Tomy Tutor 16-Bit Graphic Computer

*****

If this is of interest to you, the URL is:

and the link is in the "Collectors Corner" section.

And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

Michael

P.S. My old e-mail accounts all still work, but I'd prefer it if
people would begin to use the *new* account. Thank you!

NOTE: If rec.game.video.classic holds true to form someone
will follow up my announcement with lies and/or attacks. I left
that newsgroup approximately 2 years ago, and except for 2 days
in August 1997, I haven't read or posted there since (unless it was
to cross-post an occasional web site addition announcement or,
when I still did so, to occasionally cross-post four -- not 6 -- FS/T
lists).

However, I still receive e-mail from people who tell me that some
there are STILL talking about me. Very touching, now grow up!

For the record, I will continue to cross-post these types of
announcements there because the vast majority of the people
on RGVC probably enjoy video game related activities more
than the RGVC tradition of seeing how far you can stick the
"verbal knives" into someone.

If you are tired of wading through the lies and attacks here on
Usenet, and you would like to know my real position (on anything),
as opposed to what some with tell you is my position, then you
should either pay attention to what I say (or have said), or you
can ask me. I'll be happy to detail my TRUE position for you. :)

1302. Need Help with SIO-Protocol

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-27 00:00:00 UTC
From: Rene Ermler <garfieldxxx@geocities.com>
Message-ID: <35BC46B2.467477D5@geocities.com>
Source record: 61117

Hello Developers,

I need a little Help with the SIO-Protocol between Atari800 and 1050.
I want to write a SIO2PC-like Floppy Emulator under a linux OS.
So i build a SIO2PC Cable (with the 1498) and downloaded the SIO2PC
for MS-DOS. (this works excellent).
Next i read sone technical references about SIO and DOS 2.5. (The
SIO-Protocol
seems to be easy)
I downloaded a Sourcecode called "femul.c", compiled it, but the
program seems not to work. I changed the Sourcecode, made some
debugoutput
and came to the following problems:

1st: is there somthing in the checksum-calculation i dont undrstand ?
the atari sends at first a status request to the floppy D1:, with
ddevic=0x31, dcomnd=0x53, daux1=0 and daux2=0, but the checksum is
0x04 !
How is the checksum caluated ? in the SIO-description i read, the
checksum
is the sum of the first four bytes, with the carry added back. but
this
is not 0x04 but 0x84 ?

2nd: I tryed to ignore the wrong checksum and sendet back an ack (0x41)
and an
complete (0x43) and then the status frame:
0x10 0x00 0x01 0x00 and checksum 0x11.
i expected, the atari will send a READ on D1:, but i got an status
request
again.

3rd: How can i check the responses of the Floppy Drive ?
I wrote a program to "sniff" the serial line, but I can't see the
Packets of the Floppy .
(I know, i have my Read-line coupled with the Read-line of the
Floppy
and the Write-line of the Floppy. I need a way to see BOTH signals)

Has anybody an idea, or some reference materials for me ?

BTW: my equipment:
Atari 65XE (equal to 800XE) with Floppy 1050

Was the labyinth in 3D isometrics and you moved form room to room a bit like the ultimate games on the spectrum???

Did you have to keep the ball pumped up with air, and if it fell on spike it got a puncture and flew around the room.

If so, I think I know the game you are looking for, I cannot remember the name either (it may have been called "airball"?)

I think I have a copy at my mum's house, where my ST currently resides, if not I know someone else who may have a copy, or even my copy:(.

I'll ask around when I go mum's at the weekend.

BTW. If this WAS the game then the game was for the ST range of computers, and I think ran on any of the ST range, as the use of a mouse would indicate.

It was a good game though.

1305. WTB: MIDI Interface for 8-bit Atari

You're right. You have true double density disks that cannot be read on a stock 1050. You can modify the 1050, but a better approach might be to use a PC program that reads Atari double density disks on a PC. I know that there are lots of folks in this newsgroup that know of that program, so a little help here?

Bostone1@aol.com

1307. Commercial program resource

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-27 00:00:00 UTC
From: dlormand@aztec.asu.edu
Message-ID: <6pido4$qd9$1@news.asu.edu>
Source record: 61122

Hello, Atarians,
I am a low-level 8-bit user. Really, I got it to run
kid programs. But I observe a phenomenon in the A8 world
that I also see in the ST and TI worlds.

You can go to umich or other FTP sites and get the index,
which tells you in a thumbnail what a program does, so you
can search for things that do sort of what you want. In the
case of SW or PD found on anonymous FTP sites, that is
usually good enough to pull something down and try it, and
if it doesn't do what you wanted, fine. But consider the
case with commercial software:

1. It is (and should be) available from vendors or private
owners, but you pay money for it and wait for it to arrive;
except in rare cases where there is a PD demo on the 'Net,
you don't know whether the program is really what you want
until you get it. Now, if they were available in a store
(like they used to be) and you could handle the box, look
at the graphics, and read the blurbs, you could derive SOME
info about the program.

2. These sources almost universally provide nothing more
than the name of the program. Except for "Game", "Text
Editor", or even "Utility", you have very little clue
what the program does. This is even less than the index
on FTP sites! Are there descriptions of what these programs
are anywheres out there?

3. Possibly most of these commercial games had been reviewed
in a paper magazine long ago. Granted, sometimes these magazines
are available from the same vendors/previous owners, but it
would be awfully roundabout to buy a handful of magazines in order
to look through the reviews/advertisements in the hope of finding
out more about a program offered name-only on the 'Net.

So I have a question and a proposal:
Is there a resource that describes what a program does, hopefully in
greater detail than an FTP site index, for most of the programs
created for commercial sale for the Atari 8-bit?

OR, if people are scrambling about what to put in their 'Netzines
or even hardcopy magazines (and would like to attract subscriptions
from the newcomers), howsabout reviews of old commercial programs,
even if you know these same programs had already been reviewed
ten years ago in "Antic" or whatever.

David.
No need for magazines or online info.
All you need is spread sheet, data base, word processor,
maybe a fancy printing prog, telecomm and games.
So here' your best bet for all of above on A8.
SynCalc (not my favorite)
VisiCalc (my favorite)
There isn't really a powerful and good data base,
but SynFile will do.
Word processor (NOT Desk Top Publisher):
AtariWriter Plus, there are others.
Actually Speed Script is very servicable and is from a magazine,
so not pd, but people have it (umich probably)
And there are Text Pro people, love that one, an upgraded Speed Script.
For telecomm. BoBTerm is the standby. For 80 col and fancy theres
Flickerterm (freeware) and probably the best for 80 col IceT (shareware).
GAMES? Zillions and zillions, just do Pac Man, Star Raiders.
Also there's war games, sort of a class by themselves and children's
programs.
So, That's all you need. Unless you plan to do programming outside
of built in Atari BASIC, then Mac65 or MAE, ACTION!, Turbo BASIC.
That's really enough for anyone.
Russ

If anyone out there still has access to GEnie (and if they still have their 8-bit archive), I'd appreciate any help you could give me with locating some .PIC and AMP2 (Antic Music Processor) files that I made a while back.

I'd also like to find an Express Pro! sysop who can find a couple modules I wrote for it. One played the "have you played..." jingle when someone logged on and the other was an access level-controlled menu setup...

Thanks in advance and be sure to take the NO!SPAM out of my email address when replying!

Just want to thank everybody that responded to my message.

Turned out that the 1050 drive I picked up a while back is actually a
HAPPY modified drive and works great with those disks, good deal for a
$1.25 :) As far as the games that wouldn't work, I found out that I
need to press Option while turning on the computer so that BASIC does
not load.
Also built an SIO2PC cable so now I really have one awesome setup :)

Well, thanks, Russ, I'll keep this as a guide in case I want
to try these out, except my TI does fine for productivity
purposes.

But it still doesn't answer the larger question of:
Given the wealth of commercial titles available
through vendors or private resellers, how do you
know what you're looking at?

Source record: 61140

I have an Atari Touch Tablet with Atari Artist software I'd like to get rid of. I'm willing to trade or sell. The box says that it is compatible with any Atari home computer with min. 16K RAM. It also states that you can save your drawings if you have a disk drive or program recorder. I do not have a computer, so I do not know if it is functional. However, it comes in it's original box (good condition) and the touch tablet & pen itself are in excellent condition. The manual is missing, but it does have the original warranty cards. If wanting to trade, I'm mostly interested in carts for the 2600, 5200, TI-99/4A or the Intelly. Any questions, let me know.

1326. Re: Dataque Turbo-816 utils

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-27 00:00:00 UTC
From: "David A. Paterson" <davepat@total.net>
Message-ID: <6pjq4mfuk1@news.storm.ca>
Source record: 61141

Find the latest version of John Harris' MAE - it fully supports the '816 chip, and is the best assembler available for the 8-bit (IMHO). It's best on expanded memory machines.

There are also books out on programming the '816; unfortunately I've never been able to find any (and I own FTe's Sweet 16 board - bought from Mike in person at the TAF show).

Message-ID: <901931210@stackbbs.xs4all.nl>
Source record: 61142

Howdy folks

Somebody asked about how to put
together/build cartridges.

Well, American TechnaVision had kits
to built cartridges. But they seem
to have vanished (could somebody in
the US please check this. If I call
them, it's an International call).

Best Electronics has them. And maybe
B&C Computervision too.

Or you might try Video 61. They have
started putting software on cartridge
recently.

You'll find all these addresses in
Michael Current's FAQ.

CU Mathy Van Nisselroy

BTW if you find info in binary form,
please tell us.

Howdy all

Re: Collecting info

Why not put the file John K. Picken
mentioned on POOLDISK? Same goes for
the stuff Mattias Belitz mentioned.
But please, in 8 bit readable form.

Re: standards (XFD, ATR, DCM, Sparta,
etc.)

Don't throw out DCM. It's the only
true standard (for "diskimages") for
8 bit Atari's. And I mean REAL 8 bit
Atari's, not emulators.

Re: Atari Classics magazin

Please don't reduce the size. I
already pay 38 US Dollars for AirMail
to Europe. For me paper is better
then via Internet. For a diehard 8
bitter, I don't have the means to
view even the simplest of
pictures/schematics on my computer.
And paper magazins are easy to read
in the garden, in bed or the
bathroom....

If I understood Bob right, he has
enough stuff to put in AC. What he
lacks is people who can do the layout
and stuff like that (maybe even copy
the AC disk, stuff envelopes, put
address labels on them). I'd like to
help, but the distance and the fact
that the PC and I will never be
friends will probably stand in the
way :-).

> Given the wealth of commercial titles available
> through vendors or private resellers, how do you
> know what you're looking at?

Actually, for me part of the fun of playing around with emulators and having the various archives available is just seeing what some of the files are. I remember quite a bit from having had subscriptions to Antic and Analog about what was commercially available, and of course you can read some of the older game reviews and previews on the Antic Online site, but a lot of times I will simply go to an archive, download something I've never heard of before and load it up just to see what happens. I found some interesting stuff this way, especially BASIC programs...

But I know what you mean about reviews and guides. I have always harbored a thought to create a web page of reviews and strategy guides

dedicated to 8-bit computer softs. There is still a lot of fun and playability in some of those old titles.

Dave B.

(Dave says his TI is good for productivity. And asks how to
know the good from the bad in commercial programs.)
That's a problem for everyone, on every platform, methinks.
By reputation, which is usually not far off.
Since you're not interested in productivity, the assumption
(pardon if wrong) is you're interested in top-notch games
for the A8.
Again, reputation. (I really am trying here). Tastes in games
vary, also. I don't think there are but a mere half dozen
remaining A8 vendors, eg B&C, Bravo Sierra, Video 61, Best
are probably the most likely to have a bunch of stuff and
therefore what you want.
SAY! I got an idea Dave. Whyn't you tell us what you like
(arcade, adventure, war, board) and ask people here, who
have seen just about everything except maybe some PAL
stuff from Europe.

1333. Starsabre's Space Maker Auction

Newsgroup: comp.sys.atari.8bit
Date: 1998-07-28 00:00:00 UTC
From: starsabre@oui.com
Message-ID: <3544051613.41491948@oui.com>
Source record: 61148

OK, here it is. The greatly anticipated (by my wife, anyway) Space Maker Auction. Here's the story behind the name. I live in an apartment, and most of my collection is boxed up, waiting for the day when I buy a house and start building my game and computer museum. In the mean time, space is a precious commodity, and my surplus is taking up to much space. So, to free up much needed space, I am placing these items up for auction in my very first newsgroup auction.

As many regulars to r.g.v.classic know, I am not a big fan of eBay, and as other auctioneers know, I love newsgroup auctions. With this in mind, anything I don't get bids on (except select system packages) will be somehow repackaged and put on eBay. But I really don't want to do that, so please, if you are interested in it, bid on it here.

And now, the rules:

1) If you bid, and win, you are obligated to buy it. Bid withdrawls can be made before the item is marked sold, but anyone making a withdrawl will not be allowed to participate further in the auction unless an exceptable reason for such withdrawl is given (and this will be on my call only).

2) All bids must be sent by private e-mail. I will not except bids publicly posted in the newsgroup. If your site is screened out by my host site as a known spam oven, I will not be able to accept bids from you unless you have an alternative, more "legit" host site to correspond from. Sites my host screens include juno, hotmail, mailbox, and just added is yahoo. Many other such sites are on this list, but I do not know all of them. As a courtesy to all bidders, I will send e-mail acknowleging receipt of a bid. If you do not get a reply within 24 hours, please resend it.

3) E-mail updates will be sent to all bidders and update requesters on a daily basis. Newsgroup updates will be posted daily in rec.games.video.marketplace and rec.games.video.classic. This initial post and a few as yet undertermined updates will also go to comp.sys.atari.8-bit, comp.sys.cbm, and comp.sys.ti, but since these forums have less relevance, I will not take up their bandwidth excessively.

4) All items have a $1.00 minimum unless otherwise noted. Raises are $1 for bids $1-20, $2 for bids $21 to $75, and $4 for bids $76 and above. Bids must be in whole dollare amounts. The exception is on anything that has a minimum of under $1. These items have minimum raises of $0.25 regardless their bid value (and I will be surprised if any of these items go for more than $0.50, to be honest).

5) All items will be shipped either USPS Priority Mail for smaller pieces, and UPS ground for larger pieces within the US, unless other arrangements are

made. International orders will be worked out on an as needed basis. Insurance will be extra.

6) Payments may be in the form a cheque or money order domestically, and appropriately arranged for international payments. Cheque payment orders will be withheld 5 business days to ensure proper clearance. Money order shipments will go out the day the payment arrives. Trade value payments can also be arranged, if you have something I'd like. A mutually acceptable value of the trade item(s) will be applied to the total bid due at the conclusion of the auction.

7) Conditional bids will be accepted. A conditional bid must be at least $10. Special excpetions can be arranged for lower caps when an items goes into g1...g2...s mode for such situations as going out of town on holiday when an item is in this state, but it must be arranged with me first.

8) If you are bidding on an item from a site that precludes you from accessing your mail on weekends, let me know when you bid on an item, and I will not advance it in g1...g2...s on the weekend. If no such request comes on an item, it will be open to advance on the weekends. I will not accept a global request to not advance anything on a weekend. You must bid on the item you want in order to make this request.

9) The auction is primarily slated to begin 27 Jul 98, and all remaining items will advance into g1...g2...s on 17 Aug 98. However, if bids stall early, still items can begin advancing early. As of 5 Aug 98, any item that has not received a new bid in the previous 3 days will be marked ready to close. A message to this effect will be sent to all bidders and all relevant newsgroups. On the next day, the items will be marked g1. Any items not receiving a bid will advance to g2 the next day. Subsequently, any items not receiving any more bids will sell on the next day. Any time an advanced item receives a new bid, it will be reset to g1.

10) Any items that start advancing early will be open to new bidders, up to 17 Aug 98. On that date, only those who have previously bid on items will be allowed to bid further. As of 20 Aug 98, only those who have bid on a particular item will be allowed to further bid on that item.

11) I reserve the right to remove any item from this auction for any reason. Out of fairness to those who bid on any item that is removed, I will give an honest explaination as to why that item is no longer available. I will also give this information to anyone who asks. I don't see any reason to withdraw anything, but if I do, I don't want it to appear I am doing so on a whim.

12) I reserve the right to decline any bids I feel are unrealistic. I will give a responce to the bidder who is declined, and offer them a chance to make what ever changes are neccessary to make their bid acceptable. If the item they are bidding on is in an advanced state, I may suspend that item from selling if I feel the declined bidder needs the time to make the neccessary correction.

13) In the event of two identical bids coming in, I will take the bid that I determine was mailed first. The way my host site is located on the net, some

sites can get their mail to me quicker than others. If someone from a more removed site sends their e-mail to me 2 hours sooner than someone else whose message arrives at my site earlier, the one who mailed first will get the bid.

14) My site has had problems with both news gating and mail gaiting of recent. If any problems occur during this auction, I will suspend closing advances until the site problem is resolved. Conversely, if a bidder has host site problems that prevent him from getting a message out before the item sells, I may grant a renewal of the g1 phase for that item. I will, however, require a statement be mailed by the host site's administrator stating the nature of the problem (details won't be neccessary) to back your word. If this renewal does occur, only the bidder whose site had problems and the previously victorious bidder will be allowed to bid. I want to be fair to people who have problems beyond their control, but I have to do this in a way that will prevent abuse.

15) Public updates will be terminated on 17 Aug 98, as that will be the date that no new bidders will be welcomed. When the auction is over, I will post publicly the final results for anyone who wants to track the final prices. If you want to be included in the e-mail updates without bidding, let me know and I will add you to the update list.

16) These rules and the supplemental descriptors will not be included in the daily e-mail updates, and will onlyu be posted in the newsgroup updates about once a week. This is to reduce unneccessary bandwidth. If you would like to see them at any time, e-mail me and I will send them to you.

17) Any more rules will be posted if neccessary. I think I coverd all the bases, so I hope this is it.

And now, the auction:

Atari 2600:
6-cart selector ???
This is the item that hs errantly been identified as a video game brain. It holds six carts, and allows you to select between them at a touch of a button. Two of the buttons are damaged, but all six work properly.

Message-ID: <01bdba3c$d93e8840$60cb30a4@etlcolpc23.ericsson.se>
Source record: 61151

If you simply want to type lowercase letters;

ie."Hello" and not "HELLO"

The shift and caps lock keys both work and cause lowercase letters when pressed
(at least on a US/UK keyboard)

If this is case, holding the Control key and typing letters (ie. CTRL+A, TRL+B,etc.) will give you all the special atari characters.

oOo

If you are asking about "Character Redefinition";

You have to copy or redesign the whole character set in RAM, it's normally held in ROM.
You then modify the location in memory that tells the Operating System where to find this new set you have implemented.

From my memory

1) The new set must be on a 2 or 4K page boundary.
2) Each character is made up of 8Bytes the bit making up the pattern of the character.
3) A character set is only 128 character (1024 Bytes) long.
4) The memory location to alter to point to the new character set is somthing like 756 (Dec) [Called CHRACT]

I am a LITTLE Fuzzy on the specifics of this, It been about 9 or 10 years since I last programmed my 8bit ;-)

Next week I sould get my 8 bit info back in front of me, and can be a bit more specific.

I guess I'm not surprised. But even a start, a guide to the more
common/popular commercial programs, would be gratefully used by
a lot of newbies (myself included). Perhaps something like a FAQ,
that could be added on to by several people (particularly those
with goods to sell).

>have seen just about everything except maybe some PAL
>stuff from Europe.

Okay, Jim...
What I was aiming at was something that would benefit more
people than just me just right now. For instance, when
Bravo Sierra posts an ad, and you get his catalog and it isn't
anything more than a list of titles, sure, I'd like to support
an Atari vendor, but I haven't a clue what these things are,
other than "Games", "Productivity", etc. When I see a post here
about "F/S: Software" and I look, and it's just a bunch of titles,
I would like a guide to what these things are, to see if I really
would want to buy any. So what I was aiming at was more of a
supply-side thing: "Here's what I've got for sale."
What you are prompting me for is a demand-side thing: "Here's
what I want." This would be fine if I were going to take your
recommendations and stock up NOW (which my budget won't permit).
But besides all that, no, not productivity (necessarily, although
if the Atari did some things better than the TI, I would consider
it), and not games FOR ME (necessarily, although I like games as
much as the next guy, and games on the old platforms (in my
opinion) are more fun than those on peecees). If I WERE in the
market right now (other than browsing vendors' lists and For
Sale messages for bargains), it would be for games appropriate for
children 4-10 in both cartridge and disk formats for an 800.

No the cables to a 1224 ST type monitor I do not have, Nothing was stated about it being a ST1224 monitor. The cables I have are 2 prong, 5pin din to the computer and one video output, and one audio output. So the composite monitor would be the one. If somone has a Commodore 64 monitor it will work, if somone has an old Apple IIC green screen it will work on the video portion not the audio!.

Source record: 61159

(Dave comments on need for a more detailed review of programs
for A8 for newbies, especially.)
Dave. Ok. Right. My www site doesn't have the ftp right now,
hoping to get it back soon. I'll speak as if my site was working,
which it isn't.
I put a section for Kids&Edu on my site. I put a few paragraphs
overview of a number of children's games. I even hacked 'Math
Encounters' to make it better for children at higher levels.
I see where you're coming from. Of course, old magazine articles
with program reviews could be very helpful. But even mag articles
can be not very useful as the magazine and reviewer were talking
about a real product and had to not burn somebody who was trying
to make a living.
Anyways. Right. Some individual could write some 'overview' of
a particular class of software, as I tried to do for Kids&Edu,
I'm gonna send you a copy, it isn't that long. I strongly
suspect it will not impress you, and you'd be better off with
a collection of reviews from Antic and ANALOG and Compute, etc.
Anyways. Right (I just bought some pc kids software, and I'm
a bit disappointed. Kids Software is sorta a tough thing
to evaluate.)

Hello all,

Here's probably an odd request... Ages ago Matt*Ratt had written a program that allowed you to make ATASCII movies easily. If anyone still has it, I was wondering if you could possibly send it to me at cptvimes@hotmail.com. I'd really like to see this again. Additionally, if anyone has a bunch of ATASCII movies I'd take them too. Hopefully some of mine would be in there and I'd dearly like to see them again for some reason.

If anyone could help I'd really be thankful.

Raymond,
There are a variety of interface units that allow this. Two of the best
are the BlackBox and MI/O. These connect to the parallel bus interface
(XL series)/Extended cartridge interface (XE series). Others include
Atari's 850, ICD's P:R: Connection which connect to the SIO (disk drive)
port and provide RS232 serial port(s) and Parallel printer port. Still
others would be a simple SIO to printer adapter. This is probably the
cheapest, but least configurable. Most of these devices can be purchased
from B&C Computervisions at www.myatari.com . Hope this helps.

Would like to know how to modify an XF551 disk drive so that I can format
single sided on the reverse side.
Normally you can format as a double sided disk, but as a lot of people
don't have one of these drives, I have to use DOS2.5 on the club disk.

Source record: 61175

The only way you can do this is to:
1. Buy a leather punch, or borrow one.

2. Your disk has a timing hole on the right side, the XF551 uses this feature, so what you have to do is create a hole in the disk on the left side exactly in the same position as the right side. First of all line up the disk so the the small hole is in the center of the timing hole of the right side, measure over and punch one in the left side same dimentions. Works like a charm.

Looks like everyone is intent on getting that second index hole punched.
There are a couple of other options.

One is to format all the backs of the disks in a 1050 (my favorite.)
Remember that an XF551 can read from and write to the back of a disk -- it
just can't format the back of a disk.

The second is to scrounge around for disks with both index holes punched.
The old ANTIC Magazine disks came this way, and I know that Dysan used to
manufacture them.

The third is to ask Bob Puff (CSS) if his kit for modifying the XF551 is
still available. I know that those who used it were very successful with
it.

Have him e-mail James Mitchell at Games Plus. The e-mail address is
gamespls@micronerd.com

The place is in Phoenix, and I've purchased a lot of stuff from them.
They have a ton of Atari software still in unopened boxes. They could
well have Fractalus for 8-bit. Software is available for Atari game
systems, Atari computers, and Intellivision systems.

The phone# there is 1-888-73GAMES.

Good luck!

Howdy folks

Re: Atari Classics

Maybe you could ask some of the
EasternEuropean guys to write about
their demo's. That way AC will be
interesting again for those who don't
like all these hardware projects. (I
do like 'em. As long as you don't
need one project to be able to use
the other. For instance, if you'd
need the SmartOS upgrade when you
want the 80 column upgrade or any
other upgrade Bob mentioned in the
RED issue (Fall 1996, Vol.5, #2 aka
the last one that appeared (sp?) up
till now)

Hi,

I recently received an email from a gentleman named Neil Cooper - a
former owner of a 400. He is wondering where he can find a copy of
Rescue on Fractalus.
I checked the recent posts here and I don't see anything from him,
so I figured I'd ask. I never owned the game, although I remember the
ads & reviews and know it was pretty popular.... there must be some
copies out there.
Does anyone know of a commercial source that he might be able to
purchase it from? (or want to sell him their copy?). If so, please
get in touch with Neal - here's his email address (just merge the
lines - I don't know what he thinks about unsolicited email)

Just @ internet.

I remember reading about that; I'm not sure to what extent viruses affected the 8-bits, although the closest I probably came was a program that was supposed to make formatting easier under SpartaDOS. But the program instead wrote some kind of thingy in the boot sector that made the disk totally inaccessible. You couldn't format it or anything under any other DOS and had to use a magnet to make the disk "unusable" enough so you could format for real! This was like back in 1990 or so.

Yes, the Atari Lynx has an 65c02, sound and a graphics co-prozessor.
You can use hardware sprites, which can be zoomed. You can programm the
Lynx on an PC-Station, as on an Atari ST. You can programm in
Assembler or in C. The better thing is Assembler.

When you are interested, please contact me.

Hi, we are a the ATARI LYNX DEVELOPEMENT GROUP.
We are some people who wants to programm games on the Atari Lynx.
The group has some graphic people and some programmers.
Do you know the Atari Lynx`? Its great. It has a 65c02 prozessor,
Sound and graphics co-prozessors. You can make use of hardware sprites,
wich can be zoomed. When you are interested please contact me.

Mario,
The response from JRojas is not correct for the XF551. There is a
device from Bob Puff (CSS) called the XF Enhancer. This device (kit)
must be installed in your XF551 and allows you to switch the timing hole
monitor off and make it like a double density single sided drive for
formatting flippy disks. However, once a disk is formatted as a flippy,
a STOCK (non-enhanced) XF551 drive CAN write data to the back side of
the disk. That is, you must FLIP the disk to write data to the other
side. Flippy formatted disks can not be written to directly on the back
side due to the fact that flippy disks data pattern is written in the
opposite rotation direction from a true double sided disk is set up for.
I believe the XF Enhancer kit is $49.95 +S&H US.

Nick,

I don't think Trinity was ever published for the Atari 8 bit.
Here's the list I have of the one's that were published for the Atari
8 bit: Ballyhoo, Cutthroats, Deadline, Enchanter, Fooblitzky,
Hollywood Hijynx, Hitchhiker's Guide to the Galaxy, Infidel, Leather
Goddesses of Phobos, Lurking Horror, Moonmist, Planetfall, Seastalker,
Sorcerer, Spellbreaker, Starcross, Stationfall, Suspended, Witness,
Wishbringer, Zork 1, Zork 2 & Zork 3. I think it's complete but I
won't swear to it. If anyone knows for sure that any other's were
published, let me know.
All of these exist as *.ATR or *.XFD images.

Sincerely,
- Byron Followell

There's a guy from poland (with a gydnia.pl address, or something like
that) that posts here periodically... I bought one from him on ebay, and
had it shipped from poland to the US for a VERY minimal cost, and it
works great.

Yep. That particular part of the system didn't really need to be 16-bit,
so they saved some costs there.

You keep saying an 800 Disk Drive. There was never an 800 disk drive made for the Atari computer. Look at the drive again and give us a number off the front of the drive. I have replacment drives cheap enough with shippiing included, or if you prefer I can fix your broken disk drive.

Most Atari Users are not going to pay $49.95 for a kit to write to the back of a $00.10 cent disk. So I put up the easiest way to accomplish the task, with the least expense expended. I am sure if one really wished to rewire the drive and re-program the rom that you could put in a double sided double density IBM drive, ie: as in the 3 1/2in 720K modification?

On my Focus 2001 keyboard, the Caps Lock and Ctrl keys are interchangeable by means of dipswitches located under the keyboard. There is nothing to indicate that the Shift key's function would be changed, but this is possible.

If you're using a Focus keyboard with your PC, it's possible that the dipswitch settings need to be changed.

BTW, if you are, indeed, using a Focus keyboard, I'm sure you'll agree that it has one of the better feels around. I think mine is a close second to my 800's keyboard :)

There was a virus discussed, I believe, in
one one or more of the Mega Magazines.
There were 7 Mega Magazines, and they are
available on the internet as well as other
places.

Source record: 61065

Ok, this was a weird one. Very surreal.
It featured several different screens, each of which was
a puzzle.
Some of the characters:

walking butts
a lawnmower that would chew you up
a really large hornet

I remember one scene was set in front of the funny mirrors
at a carnival. One desert scene, and the lawnmower scene
was in a garden.

I don't think this was put out by a major game company,
but it was very well done.

Does anyone remember this one?

Portsmouth unfortunately. *Totally* irrelevant but I saw a film on Sky about Stevenage the other day - can't remember the name but it was a story of dejected youth in Stevenage New Town. Quite sad really - almost as sad as me posting that here,

Have you has any luck with the PC to Atari link yet? I'm sure that at one point the FaST Club was selling the leads and software. I shall find out if they still do it.

Gareth.

>Does anyone know where I can find a complete version of Sargon III in ATR
>format that works? (sides A+B)

Sargon III was 3 disk sides, so be sure you get the third one as well.

I don't know how well the .ATR format adapts to protected disks, as S3 was heavily copy protected (most tracks only have 17 sectors instead of 18).

Good luck.

1413. Atari Magazines...

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-01 00:00:00 UTC
From: rlcolli@ibm.net
Message-ID: <l30w1Q7YaqNJ092yn@ibm.net>
Source record: 61079

I'm rearranging my room, and as I go through everything, I'm finding
club newsletters, Analogs, and Antics, and I realize how much I miss
getting something in the mail about Atari. Looks like Atari Classics
would be great, but the magazine needs to come out at least 6 times per
year.

I've got the tools to edit a newsletter type magazine, 8.5 x 11.0, double
sided, just staple in the upper left corner. Nothing fancy, but at least
something.

Distribution would be a low rate, probably $1.50 an
issue mailed to US addresses. To handle International distributions, select
a person in a region, such as Europe, who could be e-mailed
a PDF version of the newsletter. This person could then print and
put the newsletter together to be mailed to European addresses.
This saves International mailing costs, and the European distributor would
get to keep all or a majority of the $1.50 (or appropriate currency).

It would be nice to pay contributors something, but that would have to be
worked out.

Back issues would then be available on the Internet.

The $1.50 an issue is just an idea until I figure the cost to print and
mail a newsletter.

The magazine could focus entirely on the 8-bit computers, or any 8-bit
device that Atari made (include the 5200, 2600, and 7800?).

I've already thought of a name, Memopad. (But am open to suggestions.)

Yes. the title has "Star Wars" in it. Yes it is from Parker Bros.

> There were 3 or 4 different scenarios
>(Tie Fighters, Death Star run, etc.) Is this the one you have?
No. This Scenario is called "Return of the Jedi Death Star Battle".

: leaked.. It also allowed you to select levels up to 100 (I believe)
: Fractalus only allowed level selection up to 20
```

There are subtle differences between the work-in-progress bootleg and the actual commercial release. You only have a certain time frame to let the pilots in on ROF in the higher levels. The longer you wait, the longer the duration between their knocks on the door (meaning, they're getting weaker). And if you let them kind of late, they stagger in very slowly. If you wait too long, you hear them slump to the ground and the message "Pilot Killed!" appears. Also, in the higher levels, the enemy Jaggis cannot be distinguished, as they are wearing regular white helmets. This made it a bit more intimdiating to play, of course, especially when they leapt at ya at the cockpit window!

ROF also had the intro title screen with your mothership (the demo was made available separately) and you could enter your high scores (but it didn't save to disk or anything).

No, you can't! There's another little hole beside the centre ring. It is usually only on one side, then you can't do it, unless you cut a similiar hole on the other side. There was disks with this hole on both sides earlier, but I couldn't get any more. I have 5 or 6 of them and they work great on a XF-551.

PS : It's not too easy to make the other hole, as you probably scratch the disk and ruin it!

: >STAR WARS: RETURN OF THE JEDI DEATH STAR BATTLE from Parker Brothers.

This game was a conversion of the 2600 game, and a very poorly done one, since it was a "flat" translation -- no improvement in graphics (save for the hyperspace effect), sound, or gameplay.

The game basically only had two stages. You flew the Millineum Falcon around (3rd person perspective), shooting TIE Interceptors or the occasional Imperial shuttle. You would wait for the an opening in the Death Star's shield, and go through it via hyperspace. At the Death Star, you would just shoot chunks out of it until you hit the energy core. Then you would avoid all the fireballs and stuff until it blew up. Then the game repeated ad naseum with increasing difficulty (your ship was more vulnerable to collision and enemy fire, etc.)

Also the trick was to avoid the Death Star's laser beam, which could strike you, depending on its development stage. As you play, the Death Star would be building piece-by-piece. Sometimes it's fun to watch the Death get fully constructed, but by that point, it ends your game since its lasers will wipe all your remaining ships.

if
>only I had my interface working ;)

Jaggi was the developer version that went to atari proper, and was promptly
leaked.. It also allowed you to select levels up to 100 (I believe)
Fractalus only allowed level selection up to 20

I've never seen any diferences in them other then those changes...

Too bad there's not a plan for a 90s version.. with the newer graphics on
the new pc's it's be GREAT! they could even add perhaps stoming a base with
a little "doomish" interior rescue, and multiplay over the net could include
a squadron attempting a tougher rescue...

Sigh... wishful thinking....

The Video Game Advantage Definitive Known Software List Collection

If you are looking for the most complete, detailed software lists
available you have found them. And the best part is that they are all
in a standardized format, so you can change system files without
having to learn a new style or format! Currently 32 of the 40 planned
files are on-line (2600, Intellivision, NES, Odyssey2, Sega CD, SMS,
SNES, and TG-16 all still need some work, and will be on-line as
soon as possible).

32 bit and 64 bit video game systems:

3DO REAL Interactive Multiplayer
Amiga (?Commodore?) CD32
Atari Jaguar / Jaguar CD
Nintendo 64
Nintendo Virtual Boy
Sega 32X
Sega Saturn
Sony Playstation
Tiger Game.Com

16 bit video game systems:

Philips CD-i
Sega CD
Sega Genesis
SNK Neo Geo / Neo Geo CD
Super Nintendo

8 bit video game systems:

Atari Lynx
Nintendo Entertainment System (NES)
Nintendo Game Boy
Sega Game Gear
Sega Master System (SMS)
Turbographx-16, CD, & Duo

Classic video game systems:

Atari 2600
Atari 5200
Atari 7800
Bally Astrocade

Colecovision
Emerson Arcadia 2001
Fairchild Channel F
GCE Vectrex
Magnavox Odyssey2
Mattel Intellivision
Milton Bradley Microvision
RCA Studio II

Classic computers:

Atari 8-bit computers
Coleco Adam computer -- see Colecovision
Commodore 64 / 128 computers
Commodore Vic-20 computer
IBM PC Jr. computer
Mattel Aquarius computer
Radio Shack Color Computer
Texas Instruments TI 99/4A Computer
Tomy Tutor 16-Bit Graphic Computer

and the link is in the "Collectors Corner" section.

And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

Michael

P.S. My old e-mail accounts all still work, but I'd prefer it if
people would begin to use the *new* account. Thank you!

NOTE: If rec.game.video.classic holds true to form someone
will follow up my announcement with lies and/or attacks. I left
that newsgroup approximately 2 years ago, and except for 2 days
in August 1997, I haven't read or posted there since (unless it was
to cross-post an occasional web site addition announcement or,
when I still did so, to occasionally cross-post four -- not 6 -- FS/T
lists).

However, I still receive e-mail from people who tell me that some
there are STILL talking about me. Very touching, now grow up!

For the record, I will continue to cross-post these types of
announcements there because the vast majority of the people
on RGVC probably enjoy video game related activities more
than the RGVC tradition of seeing how far you can stick the
"verbal knives" into someone.

If you are tired of wading through the lies and attacks here on
Usenet, and you would like to know my real position (on anything),
as opposed to what some with tell you is my position, then you
should either pay attention to what I say (or have said), or you
can ask me. I'll be happy to detail my TRUE position for you. :)

From: Robert S Ely <rely@ix.netcom.com>
Message-ID: <35C5A94F.C84DB98F@ix.netcom.com>
Source record: 61002

All,
I've noticed that some of the emulators can load some files directly from a PC directory as opposed to an .ATR image. Can any load/save BASIC programs the same way?
I guess what I'm asking is, could someone build a 130XE emulation that doesn't necessarily HAVE to use an Atari disk image to boot, load and save files. Can one be build to work directly from MS-DOS directories.
Second, will any of the emulators fully allow cart access as in cart images of say BASIC XE. I'd love to be able to run, edit and save my BXE files on my PC at work. Most of the stuff I write on my 130XE is in BASIC XE. I can't run any of it on any emulator I've tried. I know Rainbow has tried, but so far I can't get anywhere with the multi bank cart images.

These two items would make the Atari emulators extremely usable!

It would be really nice to also be able to run Action!, but I haven't
heard of anyone actually doing this. I guess there is a disk version of
it, but it doesn't run very well.

I've already e-mailed you the files I believe can help.
I'm just going to post the BASIC-XL Toolkit (runtime package) here for
anybody else that may want to run basic xl/xe programs without having
the cartridge. just follow these 3 steps

1. format a fresh disk and write DOS to it

2. copy the program 'basicxl.com' from the basic-xl toolkit to the new disk
and rename it to autorun.sys

3. copy xl/xe program you wish to run and rename it autorun.bxl

i also believe you can have a menu named autorun.bxl for multipal xl/xe files.
on the same disk.

If someone would like to rip their Action! cartridge, I will do my best to
make sure it works under the atari800 emulator...I'm currently pounding out
a new memory subsystem to make things that rely on bank selection perform
better...

Jason

1442. Need help! Graphics and sound, please

I am coding a simple Bomber game, and would like to ask you guys for a favour. Could anybody draw the graphics for the building, plane/ufo, men running and some extras like birds or something. And a music track would be cool! Thanks in advance.

BTW : CMC music is prefered as I have the player routines up and running already. The plane (hmmm blocky thing) is moving, but I haven't put in the bomb and such yet.

Very Funny!! the SAME thing happened to me and a atari rep who brought it over to look at.. he had JUST gotten the demo "jaggi" version, and we had pizza flying left and right!! we both looked at each other lying on the floor, and laffed our butts off!!

Ah THOSE were truly the gameing days...

Why has no one duplicated this great sneaky effect in any other game??

1446. Problem with 130XE and BlackBox

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-03 00:00:00 UTC
From: bytecat@hempseed.com
Message-ID: <35c721b6.2140028@news.demon.nl>
Source record: 61012

Since my 130XE died, i upgraded another 130XE to extra OS and extra Memory.(from my old computer)

Now i have problems with the BB, when hooking up the BB to the 130XE i can't boot up normal. Spartados loads when i'm lucky, but hangs almost always when doing the startup.
Other times when i boot, i see a graphics 8 kind of screen with blocks and stuff!

The HD is not the problem, because when booting without a HD, basic runs badly. And entering BYE always coms with a bad screen.

With my 800XL there is no problem!!!

PLEASE SOMEONE HELP ME!!!!

Louis

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

>chair with a scream, it was a great touch

Sheesh -- I must have had taken ten years off of my life when that happened to me. I first played "Jaggi Lines" back in 1985 (and yes, I got the legit. cartridge version later), and pretty much knew what to expect, based a review that appeared in Electronic Games magazine. It had mentioned that some of the pilots were Jaggis, so you had to be careful not to just open the airlock at your whim. So I knew at least what to expect, at least in theory! Now, I had the audio output played through my boombox, so the volume was loud and crisp. I was playing level 13, and landed, but the pilot wasn't in viewing range. So I waited, expecting to hear those three knocks -- and well...you can imagine what happened after that! That scared me more than anything else I've encountered, I swear.

Every time I play the game now, even 13 years later, I still get very nervous on the higher levels. :)

It would be difficult....
The controller uses the INDEX pulse from the diskette to initiate a
track format. Since you don't have one when you flip the disk, you can't
format the back side. You can read and write to it, but no format. The
1050 generates a dummy INDEX pulse during format - that's what you would
need to do in the XF551.

Instructions for backside FORMAT on an XF551:

a. Remove all cables from the Xf551.

b. Plug in a 1050.

c. FORMAT the back of the disk.

d. reverse procedure when all disks are formatted....

I have used the EZ135 SyQuest on an 8-bit using an IDE interface. I
expect that the SyJet and Sparq would also work.

The full ROM versions of OSS Action and MAC/65 (with DDT) already run on Atari800. I haven't had OSS BASIC XE running but it should operate in a similar manor.

1457. XF551 disc drive uses standard mechanism?

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-04 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <5MC1CLV@tos.pl.net>
Source record: 61022

Some 8-bit members of our Atari users group would like to replace a worn out mechanism in their XF551 disc drives. Can any 5.25 inch disc drive mechanism as used on IBM compatible machines be used in the XF551, or do only certain models work, or are some modifications required?

Any assistance would be appreciated.

The Premier Event for Computer Enthusiasts is Back!
V I N T A G E C O M P U T E R F E S T I V A L
- VCF 2.0 -
September 26-27, Santa Clara Convention Center
Santa Clara, California
Speakers, Exhibit and Flea Market
O http://www.siconic.com/vcf
The S P E A K E R S
Why would YOU come to the
Vintage Computer Festival?
KEYNOTE SPEAKER
Gordon Bell
To Learn the History
Father of the Mini-computer!
Mr. Bell will speak about
his pioneering work on the
DEC PDP-1, PDP-8 and PDP-11
For the Nostalgia
FEATURED SPEAKER
Ray Holt

To Hear the Speakers
To Buy Vintage Computers
For the Games & Contests
To Meet Other Collectors
To Meet the Pioneers
For the Prizes!
Philosophy of the Vintage Computer Festival... The main mission of the Vintage Computer Festival is to promote the preservation of "obsolete" computers by allowing attendees to experience the technologies, people and stories that embody the remarkable tale of the computer revolution.
Who really invented the first microprocessor? Guess again. This designer of the JOLT and Synertek SYM-1 single-board computers will reveal why computer history may need to be re-written.
David Rutland
On the National Bureau of Standards Western Automatic Computer (SWAC). Mr. Rutland worked under Harry Huskey to help build this first computer west of the rockies.
Whether you're into game consoles, handheld devices, arcade machines or personal computers, there's a Mac-based emulator for you.
Jim Willing
Jim will demonstrate ways in which you can put computers, new and old, back to work in the classroom. Also, how to care for your old computers.
Bruce Faust
Bruce will tell you everything you want to know about the Toshiba T1100, the first "laptop" computer.
Tom Geller

> save files. Can one be build to work directly from MS-DOS directories.

Hallo !

I think, with XLit and ATARIWin it should work directly.
Both have a device H: emulation (for PC-Drives) that should be independent
from DOS (not proofed yet).

So try this:
Select the PC-directoy as H1:
Start the emulator with pure Basic
All loading have to go to H1: now:
>LOAD"H1:MYFILE.BAS"
>RUN

Matt

P.S.: Dont remeber, if this was a H: or a M: device ...

1462. ANNOUNCE: Atari800Win 2.3

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-04 00:00:00 UTC
From: rich@cstone.net
Message-ID: <pgpmoose.199808040239.746@bureau42.ml.org>
Source record: 61027
Cross-posted to: comp.emulators.announce,comp.sys.atari.8bit

Atari800Win is an Atari 8-bit computer/game system emulator for
Windows 9X/NT. Version 2.3 has been posted at:

http://www.cris.com/~Twist/atari800win

The new features/fixes in version 2.3 are:
08-03-98 Ver 2.3
* DCM files (an older semi-compressed disk format) can now be
converted to ATR directly from within Atari800Win. This is under
the File menu. You can select a single or multiple DCM files to
start, and then will be asked the destination directory to save
the ATR files.
* DCM files can be loaded as regular disk images, but they will be
read-only since they are in compressed form. Use the DCM->ATR menu
option to create an ATR that you can then open read/write.
* ATR/XFD files can be compressed with gzip and read directly as
disks in compressed form (they also will be read only, as above -
decompress them to get a read/write file). The extension used must
be ".atr.gz", ".xfd.gz", "atz" or "xfd" for the file to be
recognized (I highly prefer .atr.gz and .xfd.gz). ZLIB is used to
manage the decompression code, and the DLL is now included with
Atari800Win. You can use any recent zlib.dll however; as long as
it is in the path somewhere, it will be found. If zlib is not
present Atari800win will still load, but won't decompress files.
Atari800Win will NOT read ATR/XFDs compressed with ZIP programs
(yet). Temporary files created when compressed disks are read are
placed in the Windows TMP directory and automatically removed when
no longer needed.

PLEASE NOTE THAT COMPRESSED FILES ARE DECOMPRESSED BEFORE BEING
READ.IF YOU COMPRESS A MEGADISK, IT'S GOING TO TAKE A LONG TIME TO
LOAD AND WILL USE UP THE ORIGINAL DISK SPACE ON YOUR HARD DRIVE
AFTERWARDS.

* Changed graphics dialogs to reflect the apparently common mistake
of not de-selecting windowed modes for full screen. The current
system is about as intuitive as you can get and still have all the
selections available.
* Added 1024x768 DirectDraw mode. This is mostly for people with LCD
screens that cannot actually switch resolutions. It also (on a
fast machine) is slightly better than 800x600 because the Atari
screen is more "zoomed in". However it is quite slow, since it is
3X expanded instead of 2X.
* The desktop will always be redrawn when exiting full-screen mode.

* Fixed a problem that could cause the Atari to not reboot on
cartridge changes (which was the cause of a few lockups in 5200
mode)
* Various prompts (dialogs, messageboxes) were changed to give more
helpful hints & directions.
* Fixed a SHIFT handling bug where it could be lost as a key but
kept as a state (if that's not confusing enough). This fixes a
bunch of demos.
* Added "Allow ROM Patches" to Hardware dialog. When switched off
this automatically disables SIO Patching, and also disables
various patches to the machine ROMs (notably HATABS) which might
prevent a small number of programs from running
* Added wait on vsync (no tearing) for DDRAW blits option to
Graphics dialogs. You can try checking this if you are getting
tearing; it could slow things down a lot though, especially if you
are running the Atari full speed.
* Added CTIA color lookup table to artifacting modes for older games
that depended on this color set (CTIA is an older version of the
graphics chip that became GTIA in later Ataris)
* Mode 2 artifacting is now implemented from the common code base.
You might find this a little disconcerting, as it will make your
DOS screen fuzzy or artifacted. Try just turning artifacting off
when using DOS and then back on for games etc.

1463. Re: Rescue on Fractalus

Well, Star Rangers for the PC was inspired by Star Raiders. It was
all there, the defense of starbases, the need to manage resources,
hyperwarping and even the dilemma of multiple starbases under attack
at once. The graphics were nicely rendered 640x480 too. So who
knows...any good coders looking for a nice idea to do. I would LOVE an
updated Rescue On Fractalus.

Mario,
NO! It must be a 360K DSDD low power drive. Other than that, sure.

Seems to me we have a problem with semantics here. Since when has a
sincere, interested BEGINNER been defined as a LAMER?

I've been talking for months about the beginners we encounter in my user
group. Well, folks, they do exist and they do deserve our support. By
your responses, I can tell that most of you agree with me.

Just a word of advice:

If you're seeking advice, and somebody who's usually helpful comes across
as being impatient, just chalk it up as a bad day for HIM, not for you.

> Just a note of compliment for those who protect us "lamers". As an avid

In article <35c9df89.4498829@news.supernews.com>
followell@dynasty.net (Byron Followell) said:-

>Newsgroups: comp.sys.atari.8bit,comp.sys.atari
>
>Does anyone know if there is a way to use an external/parallel Syquest
>Sparq with the Atari 8 bit or with the Atari ST?

You posted this article in comp.sys.atari.8bit, good, but also in
comp.sys.atari: this group doesn't exist, it's bogus, you should warn
your newsmaster so he can remove the group from the server. Relaying
bogus groups is not a good thing, as some persons not knowing it could
post there a question and wait for a never comming reply...

Bye. Bruno.

This is kind of off topic, but here goes:

I was investigating a Sparq for my PC a while back, because my hard drive was getting maxed out. I would have wanted the internal IDE model (there's that one and an external parallel model) but the guys I wanted to do that and a couple of other things to my PC couldn't get it. So I know that both models exist. There were also rumors that Syquest would produce a SCSI Sparq, but Syquest denied that.

BTW, I wound up with a SCSI Iomega Jaz drive working off an Adaptec controller, instead, and I love it!

Welcome to the comp.sys.atari.8bit newsgroup!

Atari 8-Bit Computers

Vendors and Developers List

"A comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users"

Additions/suggestions/comments/corrections are needed! Please send to:

Michael Current
mailto:mcurrent@carleton.edu

Please refer to the latest version of this FAQ list whenever possible!

Available via these locations and Usenet FAQ archives everywhere:

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, are NOT listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
developer. No prices are given.
```

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection.

Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*. If there is no copyright notice, software must be considered Freeware rather than in the Public Domain.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of my more prominent sources:
- Atari Classics, published by Bob Woolley
- New Atari User, published by Page 6 Publishing (Les and Sandy Ellingham)

"Hi!" to Marek Tomczyk, who has supplied so much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this

list, please do your part in keeping it useful for everyone!

I don't think so, Doug. I think this was the first game NOT available for
the 8-bit. It was a sign of things to come. Many things.

The answer is sort of. The was a program written called zapper that
would write a few instruction on the end of and executable program
that had a count down timer for loads of the program. When the
counter got to zero instead of loading the program it would format the
disk. The program zapper also had a function to search for files that
were "zapped" and remove the code. So I think one could say the the
program was a virus or trojan creator and anti virus/trojan as well

Bruno,

Thanks for the info. How long has this group been defunct? My
server (Supernews) shows this group as active, it has about 50 active
messages from very recently and I even picked up two new messages a
couple of days ago. How, exactly, do you define a bogus newsgroup?

Sincerely,

You can get a brand new Archon cartridge from B&C for $9.95. Their address is:

http://www.myatari.com

Archon is also one of my favorite games. :)
Good luck!

In fairness I think this is to promote show attendance. It makes good
marketing sense and hopefully entice more people to go.

I'll second that. "Manufactured collectibles" suck. Gee I'd love to get the
Limited Edition, but that's not gonna happen since I don't have the $500 or so
that such a trip to WOA would probably end up costing me. At least they
almost never live up to their hype in the long run. Witness Beanie Babies -
how many collectors will be stuck with hundreds of pounds of worthless
critters in a few years? Heh heh...

That's why I don't like it. :) I truly hope that WOA is a smashing success,
and I wish I could go, but it just means that the less affluent (I'm a student
dammit!) and geographically challenged get the short end of the stick. Blech.

Agreed... at least in this hobby. Especially since rarity and value
discussion seems to bring out the rock and bottle throwing lately.

I think some were originally made in Poland.
They could store up to 256K.
I was told they weren't very reliable, though...
I also remember an ad from Ram Products (was that the correct name?) for 512K (and more?) in the US.

Juan,
Sure, there are a few of them. Atari800Win does 800,8090XL and various
versions of 130XE. PC Xformer, Rainbow and a couple of others that do
130XE emulation. Many of these are available at
ftp://atari.archive.umich.edu/atari/8bit/emulators/

Hello,

I'm having tremendous luck so far in my requests for ATASCII emulation
so I thought I'd try something else and hope someone can help me out.
A long time ago I bought a game at Kay-Bee's bargain bin (and this was
still when they had 8-bit software) called "Dr Goodcode's Cavern" by, I
think, Gebelli Software. It was really cheesy packaging.
Anyway, the game is really goofy and I'd love to see it again but my
original floppy was eaten by something long ago. Does anyone have an image
of this hanging around? Has anyone but me ever even seen this game?
By way of a short description -- the standard Atari screen was the room,
with P/M's on whatever borders had doors on them. You navigated from room
to room with the joystick and a text description would show up telling you
about the room. Occasionally you'd get hassled by demons selling tickets to
the Demon's Ball or DragonShave signs along the way (like the BurmaShave
signs).

: > It was a sign of things to come. Many things.

: How well I remember those frustrating days. I recall how disappointed
: I was when "Bard's Tale" was released for other machines and not for
: my 130XE...

I remember those frustrating days as well. I did what Antic told us loyal Atari users to do -- begin a letter writing campaign. Needless to say, I got very little responses. Epyx responded, but they were cold about it. They said there were a couple of Atari titles already out (which was incorrect) and there was nothing more they could do. Electronic Arts responded (Trip Hawkins wrote it...or maybe he had his secretary dish out a prepared response). He was sort of skirting the issue saying about Atari's low user ration compared to the other machines, but that they did bring out certain titles.

Back then, the lack of software support was attributed to Atari's game machine image. Which didn't make a whole lot sense; if that was the case, why weren't there any more games being made for it? It made me irk that some years later that Compute! (before it became a mainstream PC magazine) cited the C-64 as *the* classic game machine. Huh?

But I think it was largely piracy that wiped out our support (the ratio of pirates to its users was much higher than the others, it seems). Atari Explorer did a very good look at the problem in 1988, and in the follow-up issue, they published my comments on it.

I have had many Atari 800XL and 130XE computers refuse to work reliably with Black Boxes and MIO's. In fact my first MIO which I purchased from a friend, refused to work with my 800xl.....the Ram disk and menu were all messed up......my friend refused to buy it back, and when I asked him if he would exchange his 800xl for mine (which worked in every way except with HIS MIO) he refused and offered to sell it to me. Well, I don't think we really were on good terms after that.

Anyhow, I learned that the best way to deal with timing troubles with an MIO or Black Box, was to swap in a new CPU. If you have lots of Atari 8 bits, this is a good solution. Eventually, you will find one that is rock solid.....

I have had so much weird behaviour with computers working with a Black Box/MIO that I keep them when I get them....

>Standard awe 32 card in....

Now that I'm home, I tried out 2.3 with Win98 and DirectX 6 core also,
and still have no problems. And that's with a Soundblaster PCI64 (which
does not work with MAME, and I'm very, very upset about that). So...
I should say, though, that I do have weird problems with Atari800Win
anyway. Like, whenever I get a new version I always have some kind of
DirectDraw problem with 800x600. I get a dialog box about an error in
cooperation mode (something along those lines), quit 800, run it again and
everyone is happy.

>BTW has anyone tried the VYSNC option? I tried it and there is still
>tearing for *me*, in fact its the same with it on or off. SO Im asking
>in here if anyone has had the same thing..

I haven't. I'm not sure I understand what "tearing" would be on this
thing. I'd load it back up, but I just got distracted by two things: Shamus
(had to test the sound), and wondering where the rest of my images went
since I only had Trolls & Tribulations there (with non-working sound, no
less). It worries me that they're all gone. It really does.

>P233MMX, D.Stealth 3d 2000, 64mgs ram..800x600 100% speed no frameskip

1517. Atari800win 2.3 and DirectX 6.0

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-07 00:00:00 UTC
From: kenlepa@my-dejanews.com
Message-ID: <6qdihj$9k0$1@nnrp1.dejanews.com>
Source record: 60972

I am currently running Win98 and recently upgraded to DirectX 6.0 (core only). Atari800win 2.3 sound was working perfectly before with DirectX 5.0, now it does not work. I get an error that it can not enable the sound, and as a result it disables it. The program seems to work perfectly otherwise...but no sound!! :-(

I suspect that this has something to do with the new DirectX 6.0 sound drivers, has anyone had the same experience.

Hopefully I can go back to DirectX 5.0, and regain my sound...at least until I can resolve this problem with Directx 6.0.

thanks in advance
ken

Source record: 60979

How much extra mem did you put in the 130XE? According to Bob Puff, and as best I remember, and talking in very vague, general, terms, the more stuff in the 130XE, the more likelyhood of communication problems with the BB. I have a 512K 130XE that will work with my BB, but my 1040/130XE rarely if ever would. One thing that CAN help is to snip the filter capacitors that lie between the SIO signal lines and the ground plane at the SIO connector in the 130 XE -- IF I'm remembering THAT correctly.

Hi, all

I was wondering if anyone knew if the BattleSphere tournament is going
to be played using Jaguars. I had heard that the guys at 4Play/ICD
were having trouble breaking the encryption code for the Jag and that
is one of the reasons why we haven't seen the game yet.

Thanks in advance,
F Vinas
Jag fan to the end.

Return Of The Jedi by Parker Bros for the Atari 400/800 is listed only as an R, and not an ER on the list which I use, which is Andrew Krieg's:

http://www.execpc.com/~krieg/links/8bit.carts

This game is still available from many reliable sources such as Best Electronics for $14 new:

Best Electronics Telephone (408) 243 - 6950

...or B&C for $14.95 new:

http://www.myatari.com/bc800c.txt

In my experience, Star Wars: The Arcade Game for the Atari 400/800 is *MUCH* harder to find, even though it's listed as U for uncommon. Also, no mail-order or internet stores that I know of have any copies of Star Wars: The Arcade Game for the Atari 400/800.

>otherwise...but no sound!! :-(

I'm actually not using DirectSound anymore, as I found it much to
picky compared to the multimedia sound system calls. It didn't work on
a lot of machines, and mmsystem always works.

That wouldn't, however, stop a busted driver from preventing you
hearing any sound. It's always possible I have a bug, but it's not
very probable - I've used the same code in other programs, so it's
being used on hundreds of thousands of machines with little reported
problems.

If you mail me the exact error it is returning (it will be a number) I
can check to see if there's anything to be done.

Yep, I get resized scrrens after a DCM conversion, Win98 backdrops in
gaudy colours being stuck behind the atari screen instead of a black
screen and the odd Direct X screen mode prob...

But not always...Seems Direct X has a mind of its own depending on your
setup. Perhaps Rich can confirm or deny this?

Tearing is where a scrolling screen does not smooth scroll in a solid
lump but appears to have segments or is choppy when moving instead.
Normally a smooth scroll in a game is synced in its own code but the
emulators also have to do this for their screens if they want to avoid
the 'tearing'.

>
>Does not work at all?? not under any of the modes??

Nope. I have to run the Windows port, which kind of blows because I
can't play Jackal until they update.
The odd thing is, if I select anything other than a SoundBlaster PRO (what
the PCI64 emulates) then I get an error saying that the card isn't found.
If I select SBPro it takes it, but produces no sound. The other odd thing
is that my gamepad won't work so I think there's a problem detecting the
entire card.
On comp.emulators.misc I was told that MAME uses a sound library called
SEAL, and that was where the problem was. I'm not sure if that would affect
reading the joystick port but it sounds fair enough. Looks like I'll have
to get an AWE64 now.
The things I do for MAME.

>Yep, I get resized scrrens after a DCM conversion, Win98 backdrops in
>gaudy colours being stuck behind the atari screen instead of a black
>screen and the odd Direct X screen mode prob...

So far, no problems with those. Only when I update to a new version of
800Win do I get DirectX problems, and then only until I quit it and reload.
Overall, I'm pretty happy with that.

>Tearing is where a scrolling screen does not smooth scroll in a solid

Ah, now that I know what I'm looking for I'll try it out and see what
goes. Since I'm at work now I can run all my images since they seem to be
here.

>Hope you find them :)

No chance, I'm afraid. I think my virus scanner went nuts and got rid
of them all. Why it would spare Trolls & Tribulations is beyond me. Oooh,
wait, maybe I was looking in the wrong place. They may be on my other
computer. Worse comes to worse, I'll just Jaz 'em from work again.

>>PII 400, Matrox Millenium II AGP, 360 Megs RAM, 800x600 -- no real

Date: 1998-08-08 00:00:00 UTC
From: lmcclure@ibm.net
Message-ID: <MPG.1036236f328566a79896a8@news1.ibm.net>
Source record: 60906

In article <5MC1CLV@tos.pl.net>, Mario Becroft (mb@tos.pl.net) stated:

> Some 8-bit members of our Atari users group would like to replace a worn
> out mechanism in their XF551 disc drives. Can any 5.25 inch disc drive
> mechanism as used on IBM compatible machines be used in the XF551, or do
> only certain models work, or are some modifications required?

Any half-height 5.25" 360K mech should work, but as another netizen pointed out, there are concerns about power. Stick with a more modern direct-drive (vs. older belt-drive) mechanism, or bypass the internal XF551 rectifier circuitry and power the drive from an external 5V/12V power supply. If you go to that much trouble, however, you should check into mods that would allow you to power the controller board from the same supply, and eliminate the need for the 9VAC brick.

With most drive mechs, you will also need to replace the cable, as unless the cable connector is in the same place as the original (Mitsumi?) mechanism, the original cable will almost certainly be too short.

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
connector, original cost $599.00, Joysticks $19.95 each, asking $50.00
or best offer. These SELL AT Video 61 for $49.95 used.

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
manual, power supply, connecting cables, oil, original cost $399.95.
Also have a non-working 1027, can be fixed at any Atari service center,
both printers cost new $399.95 each, asking $100.00 for both of them.
Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00. These
sell at Video 61 for $74.95, same price.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for
$59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

Thanks Bubba. Someone already sent me the ones you had in email, but I'm glad I saw your site. I'll have to make a link to it from mine.
Sadly, though, none of mine are in there. But at least now I know that Tim was a bit more strange and seemed to have more time on his hands than I did :)

Besides, Las Vegas is typically on of the cheapest air fares around from
just about any airport in the USA.

But still, it would be cool to see smaller regional shows get organized,
even if they would probably be little more than classic gaming
swap-meets. It would be cool to meet face to face.

>

Nah. It's possible to bypass the encryption on the Jaguar with a Jag mod chip that you can make yourself (the code is available for download on the internet). I'm sure 4-Play could get a handful of modified Jaguars to set up the tournament if necessary.

But encryption is not what has delayed the game for so long. There were essentially two problems. First, the 4-Play crew are notorius perfectionists who would not release the game until every last bug was squashed and the gameplay measured up to their personal standards. Second, the game was coded entirely in their spare time. It was only a couple weeks ago that 4-Play announced the game is complete. Now they need to actually manufacture it.

Cross-posted to: rec.games.video.marketplace,rec.games.video.classic,rec.games.video.atari,comp.sys.atari.8bit,alt.games.lynx

Hello, folks!

I have managed to find one of the holy Fujis of Atari-dom! It is a small 12 inch by 8 inch by 5 inch video console unit called Atari Video Music.

Made during the 1970s this little wonder connects to your stereo system and your TV (via RF, of course, this *IS* the 1970s!) and makes a COLOR-ful light show in sync with the musical beat. Yes, the Jaguar did it, the 3DO did it, and numerous others, BUT this was the first! You control the horizontal, the vertical and everything else. (Yes, this is in glorius 8-bit color/shapes!) Groove to disco SIGHTS and sounds (okay, maybe a more acceptable music of your choice!)

Styled in fine 70s wood grain finish with mettallic knobs and plastic push buttons this is a must for every Atari owner's home!

Now, this unit is in EXCELLENT shape. It works 100% and has been thoroughly tested with my musical collection. (hehe!) There is, however, one minor cosmetic thing wrong. (You knew it, right! :-) One of the buttons is missing a "color cover." In other words, it does not have a little plastic bezel which matches the other button next to it. Now, there is still a button there! it just does not match it's neighbor's cool 70s earth tones in color gradiation. IT really is a minor thing, but I want to be completely clear about this.

Now, if I had not just sold off most of my Atari stuff, I might keep it. However, most of my collection is now in your hands sooooooooooo.......I am looking for the following:

Genesis carts I do not have (*MUST* have box and docs)

-OR-

Lynx carts I do not have (again, if they had docs and box, they must be included in any trade. Just to help - if it was a regular release or a B&C "prototype" I have it. I do not have any of the later Telegames ones) hint - Hyperdrome would go a long way..... ;-)

-OR-

$60 plus shipping/insurance via UPS

-OR-

Best offer combination of any of the above.

e-mail mbates4@gte.net if interested

-Marlin

1552. Autoduel / AtariWin 2.3?

Has anyone actually been able to play Autoduel with AtariWin 2.3? I've tried every combination under the sun, and my session locks up when trying to compete at Amateur night. I've got copys of Autoduel ATRs from a couple of different sources and all do the same thing.

If anyone has it working, could you please tell me all of your hardware settings and possibly tell me where you got your ATR images?

I've been dying to play this game for a long time now. Any help at all will be appreciated!

Stop being an ass. I was merely pointing out that this cart is not an ER as you are advertising it, and that it's still available from many vendors. That fact that I listed what the other vendors sell it for should show you that I wasn't trying to disuade people from buying your copy. No need for the sarcasm.

Source record: 60921

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=24749626

506 Atari games on CD!!!

Almost every Atari game ever made on 1 CD! Made for PC. These are Atari 2600 games. Perfectly playable and controllable with either the keyboard, a joystick, or a gamepad.

Detailed instructions on how to use the CD is inluded on the CD, happy bidding!

Very few games do not work with the current version of the emulator used, so bid according to about 470 Atari games. CD is a high quality CD-R. High bidder(s) prepay and pay shipping and handling of $2.01.

Bonus for a limited time also get over 50 playable games for the Atari 5200 on the same CD

Please do not bid if you do not plan to follow through with the transaction.

Also if you wish for another $5.00 I will add over 3638 files for the Atari 8-bit computer(99% of the files work with APE, most with an emulator) of these 3638 files you recieve 2500 different games like: M.U.L.E., Miner 2049'er, Pac Man, Seven cities of gold, Lode runner, Zork, Star Raiders, Shamus, plus any more

If you have an 850, and terminal programs for both computers, get yourself an Atari modem cable (looks like a 9-pin to 25-pin rs232 cable but is wired differently) and a null-modem adaptor. I believe Best Electronics and B&C still sell them. You may need another length of cable if the machines are far apart. You should be able to do the transfers at anything up to 9600 baud.

You can either get a SIO to PC cable or go to radio shack and pick up a Null Modem connector. Connect the two modem cables toghether one from the 850 and one from the PC, bring up a modem program on the pc and the Atari. If I remeber correctly you type in ATD on the Atari and enter then keep pressing return it should activate the PC modem program type in ATA on the pc and you have a connection between the two.

Been a long time since I did this and I am sure there will be someone to correct what I have forgotten.

Hi These were basic games I saved myself. I tried cload and enter "c:" and load "c:" even run "c:" and I either get a 21 error or a 143 error. I tried saving my own program with csave and I can cload that one just fine. I did try a couple with the start boot and it loads all the way through then I get a boot error. Was there something I did before that changed the speed? Several of the load attempts seem to load 2 blocks normally then the speed seems to switch faster and it loads 3 more then quits with a 143 The 410 was the same one that made the tapes 10 years ago. the computer is different though. Do you know of a 410 manual online? Or any tricks or utilities that can tell you whats saved on a tape. They are probably just silly little basic things. Thanks Mark

ok so I see these Super Armatrons from Radio Shack on sale for $14.99 and buy two of them, thinking it should be a no brainer to hackem and slapem on a little robot.
I get to my workshop and surpise, surprise, they don`t have little motors that you can just wire up to a computer and run. No, NO, Rat Shack went and made them run from one motor and two joy sticks that move gears around to apply power from the motor to the correct gears. So I`m stuck with two and am wondering if anyone else was ever dumb enough to think of this idea of using these arms aswell or if somone knows a way to hack them?

Thanks for your help,
Justin R. Ratliff

> Jim
>

It is more than likely you are correct it *IS* the plastic film insert.

There was a design flaw in the 130XE which allowed too much current flowed in the tracks connecting the keys, the job of the plastic insert. This flaw made the tracks in the plastic get too hot, which in turn made them Oxidize (basically rust away). There will not be any apparent pattern to failure the bits that are hottest of for longest will fail first. I thing the option key went on mine first, luckily it was still in warranty.

You can either try to find a supplier of the plastic sheets or buy a second hand computer, and salvage the keyboard. However, this computer may have the same fault:(.

I think there is a regular FAQ posted to this group will a list of vendors who you can contact for a new key board. In the UK, the Sinclair Spectrum had a similar problem.

Either way the fault WILL re-occur if you do not do something about it. All that need to be done is; replace one of the resistors on the keyboard, I cannot remember off the top of my head which one to change. There are/were kit's (containing, resistor and instructions) you can buy that fully explain what to do. Again see the vendor FAQ posted to this group for suppliers (the Kit cost about 50p (UK money))

Incidentally I seem to remember a dealer over here in the UK selling a little device that allowed a standard PC keyboard to be attached to the XL/XE computers. I saw it once at a show over here (UK), but never since :(.

The Dealer was called Derek Fern and the company Micro Discounts, Birmingham, UK. Any one have one of these units? (or maybe is Derek reading this group)?

Dave

1583. Definitive Known Software Lists (cartridge and CD) [08/10/98]

The Video Game Advantage Definitive Known Software List Collection

If you are looking for the most complete, detailed software lists available you have found them. And the best part is that they are all in a standardized format, so you can change system files without having to learn a new style or format! Currently 32 of the 40 planned files are on-line (2600, Intellivision, NES, Odyssey2, Sega CD, SMS, SNES, and TG-16 all still need some work, and will be on-line as soon as possible).

32 bit and 64 bit video game systems:

3DO REAL Interactive Multiplayer
Amiga (?Commodore?) CD32
Atari Jaguar / Jaguar CD
Nintendo 64
Nintendo Virtual Boy
Sega 32X
Sega Saturn
Sony Playstation
Tiger Game.Com

16 bit video game systems:

Philips CD-i
Sega CD
Sega Genesis
SNK Neo Geo / Neo Geo CD
Super Nintendo

8 bit video game systems:

Atari Lynx
Nintendo Entertainment System (NES)
Nintendo Game Boy
Sega Game Gear
Sega Master System (SMS)
Turbographx-16, CD, & Duo

Classic video game systems:

Atari 2600
Atari 5200
Atari 7800
Bally Astrocade

Colecovision
Emerson Arcadia 2001
Fairchild Channel F
GCE Vectrex
Magnavox Odyssey2
Mattel Intellivision
Milton Bradley Microvision
RCA Studio II

Classic computers:

Atari 8-bit computers
Coleco Adam computer -- see Colecovision
Commodore 64 / 128 computers
Commodore Vic-20 computer
IBM PC Jr. computer
Mattel Aquarius computer
Radio Shack Color Computer
Texas Instruments TI 99/4A Computer
Tomy Tutor 16-Bit Graphic Computer

*****

If this is of interest to you, the URL is:
http://www.io.com/~vga2000/

and the link is in the "Collectors Corner" section.

And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

Michael

P.S. My old e-mail accounts all still work, but I'd prefer it if
people would begin to use the *new* account. Thank you!

NOTE: If rec.game.video.classic holds true to form someone
will follow up my announcement with lies and/or attacks. I left
that newsgroup approximately 2 years ago, and except for 2 days
in August 1997, I haven't read or posted there since (unless it was
to cross-post an occasional web site addition announcement or,
when I still did so, to occasionally cross-post four -- not 6 -- FS/T
lists).

However, I still receive e-mail from people who tell me that some
there are STILL talking about me. Very touching, now grow up!

For the record, I will continue to cross-post these types of
announcements there because the vast majority of the people
on RGVC probably enjoy video game related activities more
than the RGVC tradition of seeing how far you can stick the
"verbal knives" into someone.

If you are tired of wading through the lies and attacks here on
Usenet, and you would like to know my real position (on anything),
as opposed to what some with tell you is my position, then you
should either pay attention to what I say (or have said), or you
can ask me. I'll be happy to detail my TRUE position for you. :)

Justin,
You might still be able to do this. hack the joysticks. If these are
anything like the Atari joysticks (not mechanical devices, but
electrical controls) you should be able to connect the cables to the
Atari's joystick ports and control the arm from the Atari. The joystick
ports can be used as output data ports. If they are mechanical controls
(wired that physically move the gears) then it will be a bit more
difficult, but still possible.
You'll need solenoids or motors and a control circuit off of the JS
ports to replace the sticks. These can be controlled to move in and out
to control the gear movement. This version would be a bunch klugey, but
should work.

>copies! I don't get much new stuff lately.

I wish I did. That's what I'm looking for actually. I know a few of
them got passed around, but I guess no one kept any.
I made them all with Atari*Toon for my BBS at the time, some even had
modified character sets for that more, er,
realistic look. I'll keep banging away though.

>The biggest benefit to my site is being able to watch movies _online_! :)

Too true. My wife was a bit bothered that I found that toilet movie so
funny. She just didn't get it.

Remember that the 410 is a tricky animal, i have a couple of them, and since new they usually stuck when ff or rewinding tapes, remember that there are several commands to load and retrive the info from the tape, also, i usually start the loading in the lasts seconds of the mark so i got the minimum time on it, the other chance is that your tapes already lost some freqs and so they turn useless. Thanks God i could buy a couple of drives...

The tape I have used to belong to my ex's brothers when they were younger
before I gave them a disk drive. I just find it strange that every file on
the tape won't load. Is it possible it's a data file for atariwriter I
wonder.. Hmm I guess if I could just find a utility to dump bits to the
screen... Thanks Mark

it's been a while but... If you can save and load stuff from tape now, but
not stuff that you used years ago it could be possible that the head is out
of alignment. This happened to me a couple of times when I owned my 410 and
I had to bring it into the shop. From what I understand, you can align it
yourself oscilloscope and know whatever else you need.

From: jakarppi@tuomi.oulu.fi
Message-ID: <6qnnaoaig1@ousrvr3.oulu.fi>
Source record: 60861

here i go following up my own posting... oh well... i took a bit deeper look into the files that i'm wondering about. the .gam files are *very* simple... no problems with them. then again it looks like the .cav & .int files have the following structure:

```
ofs desc
--- ----
0-3 4 times 0xab (what for?)
4..15 filename (terminated by 0x96, padded with 0x20)
16..455 cavedata? (880 4-bit nybbles, i guess)
456 cave delay
457 unused?
458 cave time in seconds
459 unused?
460 diamonds needed
461 unused?
462 diamond value
463 unused?
464 bonus diamond value
465 unused?
466 slime permeability
467 unused?
468 amoeba time of growth
469 unused?
470 magic wall milling time
471..503 ???
```

now all i need is to find out the color infos... and preferably the meaning for all the rest 32 bytes. afaik the atari bdash uses 160x192x4 mode, and for all the four colors it needs the hue and luminance values so in the 32 bytes there should be 8 bytes containing the hues and luminances... but which?

The wav2cas utility allows a PC with sound card to examine the bits on
the tape, or convert the audio to data. Look in the Umich archives
for this utility. I suppose you can find a PC on which to run this
stuff.

There was a two part article in ANALOG on doing this. It required some
solenoids and fishing line to do the job of the joystick. I'll try to
dig up the Issue for you.

1600. Help developing a used Hardware Price Guide

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-11 00:00:00 UTC
From: Peter Farago <peter@farago.com>
Message-ID: <6qqntp$e7l$1@winter.news.erols.com>
Source record: 60737

We have all 8-bit Ataris go for as little as $10 to over $100.

As a collector I wish to determine fair market prices on all used 8 bit
equipment
Before I begin to make firm offers to owners.

Perhaps using B&C's resale price list as an index might be a good idea.

If you have a point of view on establishing fair prices drop me a
line..... peter@farago.com

Source record: 60740

< Writing backsides of XF551 disks >
There is one serie of XF551's made, that can both not format AND not WRITE to the backside, even when formatted on another drive...

I'm sure about this, since I've bought 9 of these drive's, all with this strange mechanic inside.

The easiest way to ignore the index-hole is to disconnect the photo-diode, and just glue a small magnet directly on the "wheel" of the stepping motor (sp?).

After that, mount a reed-contact beside the wheel at a place it'll switch when the magnet (rotating as the wheel turns) passes that contact. Just connect the two wires of the photo-diode to the reed-contact, and you'll have a new RPM signal, undepentant of what kind or what side of disk is in the drive...

--

Another way is to mount a second IR-LED and photo-receiver in the mechanic at the free space with a switch to toggle between the two photo-receivers. Less userfriendly, but it works...

--

Third way is to replace the LED and receiver to the stepping motor in a way that the receiver can see the reflecting light of the LED. Just paint one half of the wheel black, and you'll have a RPM-signal again...

From: sysop.fox-1@stackbbs.xs4all.nl
Message-ID: <902959012@stackbbs.xs4all.nl>
Source record: 60741

Hey Louis,
I think someone else will reply this already, but:

If you have quite a lot of extra memory in your 130XE (>320Kb) it is
possible you have some timing-problems...

Also make sure that you've installed the termination resistor pack on the
harddisk, if this is your last (or only) SCSI-device connected on the
cable...

Bob Puff made some simple upgrades to stabelize the XL and XE. This is
mainly done for people using extra memory together with a Black-Box...

Making this mods will probably solve your problems. It's available on
most Atari 8-bit supporting BBS'...

Message-ID: <35cfb7f4.341434103@news.alterdial.uu.net>
Source record: 60866

Hello...

I recently dug out my Ataris, and downloaded the CC65 compiler to try hacking some new code. I'm using the unix version hosted on a SUN Sparc. Everything works pretty well... There were some .obj files included for things like graphics and xio, but I'm looking for the actual source code from which these libraries were created. Does anyone have any pointers to C source besides that which is on the umich archive?

Is there anyone working in a similar environment that would like to trade tips?

regards,
chris

Source record: 60871

Were you using Autoduel with AtariWin2.2 before? If so, did it work?

If none of these apply here:

Make sure you change the hardware settings:

1) Select 130XE emulation with AtariXL ROM set
2) Set computer to fastest speed.
3) disable the SIO patch.

that should be all you have to do.

And apart from anything else, its our obsession with removing bacteria
that has resulted in our immune systems being severley depressed and
unable to cope with many common bugs that used to get thoroughly bashed by
our bodies.

Too clean an environment and too much usage of penicillen etc. has
increased the strength of many bacteria whilst simulatenously breeding a
generation of humans who cannot fight even the 'standard' strains any
more.

Yes, folks, the sale continues. I have more than this in disks and books,
just have not had the time to list them. Ask if you think I might have
something you have been looking for. Want to see what else I have for sale? visit:

http://home1.gte.net/mbates4/

Here is the 8-bit stuff. I am interested in trading for Lynx or Genesis carts.

Atari 8-bit Computer & Carts, disk, books for sale

[Mail Marlin!] Send me a message, comment or a trade offer!(mbates4@gte.net)

Here is what is for sale:

Prices do NOT include shipping.

Feel free to make an offer on any or all.

* Atari 8-bit Carts/Disks & Manuals For Sale
* Atari 8-bit Hardware, Books, etc for sale

Cartridges

All loose cartridges are $2 unless marked

EXCEPTIONS:

Carts with docs but no box add $1
Carts with box and docs add $2

Yes, he is still posting regularly. Fortunately he has cut back from the 5 or
so at one time, but he's still posting.

1620. Low level format w/MIO

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-11 00:00:00 UTC
From: buck@bit-net.com
Message-ID: <6qqff1erl1@news.bit-net.com>
Source record: 60881

Thanx to all who helped me find or sent me low level
format utils for the MIO. Sadly, I'm currently trying to
use a Connor CP30100 drive which responded kind of
unfavorably to all of the programs.
Until I can get a hold of a drive that works with the
existing utils, I was thinking that perhaps I could try to
write a formater myself. Anybody have any info on
programming for the MIO's SCSI interface?
I do plan on trying to find another drive (would an Iomega
ZIP drive work?) but I seems that writing a new format
program could be fun in the meantime.

Thanx again!
Bill

From: James King <jeking@xmission.xmission.com>
Message-ID: <6qqiqa$3re$1@news.xmission.com>
Source record: 60884

Well, I think I was the first to have an Atari 8bit connected to
a Novell Netware 4.11 file server (indirectly via APE and 100BaseT
Ethernet), and now I have my Atari on the Internet (indirectly) via a
dedicated serial connection to a Linux box that has a dedicated 128kb PPP
connection to the world.

Its nice to be able to fire up my 130xe, run ICET and be live on the
Internet. No dial-up, no fuss, easy!

Now, I need to get APE working under Linux.. Is there a FAQ?

Mi> michelvp@wanadoo.fr

Hi there,

a French Atarian, don't see those much! Nice.
Well, you can order a SIO2PC interface module from the
(German) ABBUC group (with SIO2PC software).
With this interface and the software you can easily "upload"/"download"
software to your pc from your Atari.
APE, another piece of software does the same, and works also with
the SIO2PC interface.
If you use either software a lot, it would be nice to register
it by the authors of it.

By the way, you could order this hardware/software by post, but
you could also pick it up in Herten, Germany on October 24th.
The ABBUC is having their annual meeting there then, and you could
meet another 100+ real 8 bit Atarians too!!!

Hmmm, maybe you could visit the homepage of the ABBUC first.
If someone knows it by heart here, please mention it.
I'll have to look it up back home first (just typing this on my
way to work you know...).
If nobody replies, I let you know as soon as possible.

Regards,
Bo.

1626. Columbus OH US Swap & Sale Atari Enthusiasts of Cols.

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-12 00:00:00 UTC
From: "R. Wayne Arenz" <rwarenz@infinet.com>
Message-ID: <uP5A1.852$q5.14737283@news2>
Source record: 60742

Greetings. The Atari Computer Enthusiasts of Columbus wish to announce they will be holding their third (and continuing) ANNUAL SWAP AND SALE on September 26, 1998 from 10:00 a.m. to 5:00 p.m. Eastern Daylight Time. The event will be at the Oakland Park Community Center, 980 Lenore St., Columbus, Ohio. Please note that this Community Center is slightly off-street, on the north side of Lenore.

If you cannot decode the attached .BMP map, here are the directions in text: (other formats may be possible if needed. Contact R. Wayne Arenz below).

Columbus is surrounded by a circular beltway, InterState 270. This circle is divided into quadrants by I-70 running east-west and I-71 running north-south. Lenore St. is slightly off I-71 North, in the North East quadrant of the City.

If entering the City on I-70, go under the I-270 belt and head downtown. In the center of town look for the branch to the left onto I-71 N (Cleveland). Take this branch. Approximately 2-3 miles from downtown you will encounter the exit for East North Broadway. Exit here and proceed east (right) "one block" to Maize Rd. [If you miss the exit, get off at Cooke Rd. - see below]. Turn left (north). In order you will pass Oakland Park, Urana Ave., and then you will come to Lenore. Turn right onto Lenore. The Community Center is very near the corner, slightly off-street, and on your left (north). WATCH CAREFULLY!

If you are coming from I-71 south, proceed into downtown where in order to continue to follow I-71 you will "exit" and make a slight jog east on I-70. After approximately 1 mile on I-70, I-71 N will branch off to the left, as above.

If you are coming from I-71 north, proceed toward downtown. In order you will see exits for Route 161, Morse Rd./Sinclair Rd., and then Cooke Rd. If you pass Cooke, the next exit is East North Broadway and you will need to utilize the directions above. However, if you get off at Cooke, go left, east (back under I 71 N). Cooke makes a sharp, but short jog. If you follow the jog left and then continue to go straight, you will re-enter I 71 N going north!!! Follow the jog left and THEN GO RIGHT. After a short drive on Cooke Rd. through a pleasant neighborhood of extremely large yards, you will come to Maize Rd. Go right (south). In order you will see Norris, Hidden Acres, Blenheim, Northridge Rd., Acton Rd., Zebulon Ave., and finally Lenore. At Lenore, turn left, and follow the directions above.

Be warned! There is currently construction on the north I-270 belt that intermittently blocks people from making turns south onto I-71 ... the Ohio Department of Transportation does provide at least ONE way to eventually get onto I-71 N going south, but it may involve some driving around!!!

The Swap Meet is open to all Atari vendors, flea-marketeers, buyers and other interested parties of all Atari platforms. Even some "other stuff" will be tolerated as we understand "full closets", but this is intended as a primarily Atari event. Vendors and flea-marketeers should donate $5 per table that they wish to occupy; each $5 table donation includes the admission donation for one person. The tables are of the standard 5 or 6 ft. long, fold up variety. Electrical power will be available. Other folks should donate $3 for admission.

We hope to see you here!! This is one of the "only" remaining events of its kind in the mid-east/west/whatever-we-are of which we know. It's not the Las Vegas convention, but it's still enthusiastic!!

Further info: rwarenz@infinet.com chwbrown@ee.net Charles Brown, ACEC Pres. (614) 447-9789.

Subject: 11.4) How do I transfer files using a null modem cable?
This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)
A: Simply put, you need a terminal program and an RS 232 port on
each computer. The RS 232 ports need to be connected
together using a 'null modem cable'.
For up to 4800 bps, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. (Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25-pin port.)
The right hand pin on the 'long' side of a female 'D'
connector is #1. There are 13 holes on this 'long'
side, 12 holes on the 'short' side. The numbers go from
#1 on the right to #13 on the left on the 'long' side
and from #14 to #25 from right to left on the 'short'
side. #25 is closest to being under #13. A male
connector is the mirror image of this.
Most terminal programs allow a null connection, without a
carrier detect. Notably, '850 Express!' does not.
A convenient way to make a null modem cable, up to about
30 feet long, is to use two female DB25 connectors and
some three or more conductor cable. Using the two DB25
female connectors allows unplugging your modem and
plugging in the null modem cable. This also avoids the
confusion of the wide variety of serial port jacks on
different computers. Almost all computers connect into
the modem via a DB25 connection.
The SIO port on the Atari cannot be used directly. An
850 Interface Module, P:R:Connection, Multi I/O, Black
Box (by Computer Software Services) or similar device
that provides an RS232 port must be used.
On the Atari, the port is a female DB9. So you need a
male DB9 to male DB25 modem cable to connect to your
modem. So why not use this cable as your null modem cable as well?
For higher speed connections, above about 9600 bps on the
8-bit, you need the flow control lines. You also need
a Multi I/O or Black Box, which use the PBI (parallel bus),
then you can go higher than 9600 bps.
Following are pin assignments for a DB25 pin RS 232 C port.
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o o
25 14
(Above is female, male is mirror image.)
1. Protective Ground 12. Select Alternate Rate

2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock8. Carrier Detect
A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already crossed.
(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

>unfavorably to all of the programs.

Been there & done that... I think that you
will find that the only common SCSI drive
that can be formatted to 256 byte sectors is
a very few models of ST225N (N was I think
the designation for SCSI models). According
to ICD (years ago), Seagate actually changed the ROMs, and after the change,
even these
could not be formatted to 256 bytes. With
the MIO, you are pretty well limited to MFM
drives with a SCSI adapter. Adaptec is one
that is commonly used. There still are lots of
MFM drives around, although if you want
to use removables (ZIP, etc) you are going
to need a Black Box from CSS. ICD said
at one time that it would only take a ROM
change in the MIO to read 512 Byte
sectors, but it was never done. There are
some IDE interfaces, but they are of the
"make your own" variety, although there is
a German one that might be for sale, and a
Polish unit that is no longer for sale.

>though. Do you know of a 410 manual online? Or any tricks or utilities that
>can tell you whats saved on a tape. They are probably just silly little
basic
>things. Thanks Mark

I think the key here is that you "made the tapes 10 years
ago," and that the 410 has sat unused, or largely so, since then.

Sadly, any device with moving parts is subject to physical de-
terioration if it sits unused for a long time. Lubricants thicken
and collect dust, electronic components lose some of their pre-
cision, parts in physical contact stick together, and so forth.

On the large scale, these changes wouldn't be a big problem:
if you pop a ten-year-old music cassette into your 410, play
it, and arrange (there's a POKE command...) to hear the music
coming out, you probably won't notice ANYTHING WRONG --
the music will probably "sound just fine."

Unfortunately, as you know, computers operate at a much smal-
ler scale; in this case, the (FSK) circuit that converts the "tones"
recorded on a cassette, into the on/off digital bits of computer
data, needs to receive from the tape mechanism very short,
very accurate impulses at very small, very regular intervals. The

accuracy, length, and timing of the pulses all depend on the tape moving through the playback mechanism at the proper speed, at an EVEN speed, and in the proper alignment relative to the recording/playback "head" -- and physical deterioration-through-disuse can throw off ANY or ALL of these.

In order from most to least likely:

1) The thing needs CLEANING! Get a standard "tape-head cleaning kit" (Radio Shack USED to sell 'em, they probably STILL DO) and give the thing two or three cleanings in a row. (Poor man's cleaning: dip a Q-tip in Rubbing Alcohol -- but be careful: the R.A. you can buy at the drugstore may not be pure enough, and can leave a residue when it dries. Find the purest (95% or better) R.A. you can! Moisten the Q-tip and rub it gently but firmly back and forth across the face of the recording/playback head where the tape contacts it. Also clean the rubber "pinch roller" and the thin metal shaft (the "capstan") it presses against when you push PLAY. (For best results, plug the 410 into a power outlet, push PLAY, and press your R.A.-moistened Q-tip against the RIGHT side of the point where the pinch-roller meets the capstan.) Be careful not to leave Q-tip fibers behind on the capstan, pinch roller, or face of the head.)

2) The head needs demagnetized. Again, Radio Shack used to sell a "tape head demagnetizer;" with any luck, either they STILL DO, or you know somebody who still has one from the 1970s (I do!). Buy, beg or borrow (don't steal ;-)) a demagnetizer and apply it as per directions. (Unplug the 410 from power and the computer. Plug the demagnetizer into a power outlet, hold it FAR AWAY (both arms' length) from the 410, turn it on, and KEEP IT ON throughout the following motion: slowly bring the demagnetizer from far away, in to ALMOST contact the face of the head. Make small circular motions in front of the head, but don't touch it. Then VERY slowly withdraw the demagnetizer back to "far away," and only THEN allow it to turn OFF. If you accidentally turn the demagnetizer off BEFORE getting it back "far away" from the head, perform the whole procedure over again from the start.)

3) The head is "out of alignment." Stuff recorded on tape is laid down in "tracks" like lanes on a highway. For proper volume-and-phase of playback, the head has to "drive entirely in its lane," i.e. in the lane as it was originally laid down at recording time. If the head "drifts" out of its lane, it no longer passes over ALL the recorded data -- PLUS it now passes over whatever OTHER stuff may be lying around in the "oncoming lane," on the "center line" itself, etc. etc. This all garbles the playback, quite possibly to the point where the sound-to-computer-data (FSK) electronic circuit cannot

make sense of it. This is best fixed by a professional, or
at least somebody with an oscilloscope and the knowledge
to use it -- but if you're foolhardy and desperate, like I was
at the time *I* had these problems, you can possibly get
away with a poor-man's adjustment. You'll probably have
to open the 410 up, to get at the area surrounding the play-
back head; since the adjustment has to be performed with
the 410 RUNNING, you'll need to be careful not to electrocute
yourself by touching the wrong exposed parts at the wrong
time... Anyway... On or near the "base" of the head, you
MAY (I don't know; I've never opened up a 410 specifically)
find a small screw that goes through the center of a spring.
This is (one of) the head-alignment adjustment screw(s).
Hook up the 410 to power and the Atari, turn on the com-
puter, get into BASIC and perform that POKE (which I can't
remember; somebody help me out) that lets you play a
music tape through your TV/monitor, turn the monitor up
so you can hear it well, insert a tape (ideally, one containing
a commercially-recorded Atari computer program with
AUDIO (sound) on the other track... realistically, a commer-
cially-recorded (NOT homemade!) MUSIC tape), and press
PLAY. MARK THE STARTING POSITION OF THE SCREW,
before proceeding... Now listen carefully to the sound you
hear from the monitor (playing the tape if all as gone cor-
rectly to this point). SLOWLY turn the screw and try to hear
whether/when the sound gets "clearer" or "crisper." You are
aiming for the clearest, crispest sound you can find, and you
shouldn't have to turn the screw more than about a half-turn
(though I can't say in WHICH DIRECTION) from its original
position, to find it. If you CAN'T TELL, or CAN'T FIND a bet-
ter position, return the screw to the POSITION YOU MARKED;
at least you won't have made things any WORSE.)
Perhaps the lubricating oil has thickened, collected dust, or
just plain "gunked up" inside the mechanism. This would cause
the 410 to "run slower," altering the playback frequency, pos-
sibly enough to make the FSK circuit fail to detect the proper
"1s and 0s" for the computer.

4) The drive belt has gotten slack and loose, causing the
410 to run unevenly and/or too slowly. Replace it. You may
be able to use a rubber band of appropriate dimensions, but
it won't hold for long; get those programs copied and consid-
er yourself lucky. Someone MAY still sell the appropriate
replacement drive belts, but I have no information about that.

5) The lubricating oil has thickened, collected dust, and
generally "gunked up," making the 410 run slow. You may
be able to carefully clean out old, gunky oil (open the 410
up and look at anything that rotates, and see if there's a
bunch of gunk around its base) and relubricate things with
light oil ("3-in-1" style, NOT automotive "motor oil!"). Be

very careful, if you do this, to apply just the tiniest drop of new oil, and only EXACTLY where you saw the OLD gunk.
In particular, avoid "like the plague" getting any oil on anything made of RUBBER -- a drive belt or the pinch roller.
Oil will not only make these slip so they don't work properly, it will eventually eat into them and destroy them altogether!

6) If you happened to store the 410 with the PLAY button depressed, the pinch roller could have developed a dent where it's been pressed against the capstan all these years. This would cause a "bump" or "jerk" in tape playback speed.
I'm not sure how to best deal with this; you might simply have to REPLACE the capstan. Scavenge or cannibalize another tape player?

7) Electronic component failure...

Your description of being able to successfully save-and-restore a program TODAY, argues against theories 4, 6, and 7. You're lucky. :-)

If worst came to worst, and you were an electronics hacker, you might be able to splice the output of a "known good" tape player, onto the input of the 410's sound-to-computer-data (FSK) circuit, so that the Atari merely "thought" the tape was being played back by/in the 410... I would try this, myself, if necessary as a last resort, but I'd need a lot of help to "get it right!" :-)

Good luck,

Chris Chiesa

This whole issue is complicated by the fact that the BBSB cart contains
two separate regions of bank-switched ROM, each of which can be switched
to any of FOUR different banks. (After several years' "mothballing,"
I happened across my notes on this very topic JUST LAST NIGHT! What a
coincidence! If anybody wants specifics, let me know ASAP before I lose
the notes again... ;-))

For what it's worth, I found a downloadable binary "disk version" of
Bounty Bob Strikes Back, on the Net a few months back, got it downloaded
onto my REAL (not emulated) Atari, ran it -- and had it work for just a
few minutes before crapping up and filling th screen with garbage. In
short, it acted as though it was partly okay, but corrupted. Anybody get
a disk version working ANYWHERE? If so, where can *I* and Gareee get a
copy of what YOU're using?

No, .20 was Markus's last ever update and has been quoted as saying that unfortunately he does not have the time these days due to work. Im sure there is no source code either...

BUT if you go here http://www.concentric.net/~Twist/atari800win/ there is a Windows emulator thats superb and there should be links from there to the DOS and other versions. This emulator is by far the best IMHO and is well worth a look if you want to run the old games again...

Have you tried using the reset all values tab on the menu bar? if not
then maybe try deleting the key in the registry BUT use Regedit in the
Windows folder with total care..

Just search for Atari800 and delete the key..

If you system has not changed since the last version I can't see whats
gone wrong..

Did you upgrade to DirectX 6.0 in the meantime? I've had one other person say
that upgrading to DirectX6 broke their sound, even though I no longer use
Dsound. It's a possibility, since DirectX installations can mess around with
your drivers.

Thanks for all the tech info. I used to work on 9 track cipher drives in the
mid 80's :) Gawd I remember what aligning them was like.

I can say it's clean. It wasn't pinched when it was stored. Am I crazy in
thinking there was a turbo mode I used to put it in to save or load?
Most of the saved files seem to load one block and then the pitch changes. It
gets higher for 2 or 3 blocks then stops with the 143 serial checksum error.
I think my old computer had an omnimon os switch. Would that effect anything?
I'll have to try and load my sinclair zx81 frogger tape to make sure I'm not
loading the wrong tape :)
It's probably high school history papers anyway. What format did atariwriter
save in with cassette?
Anyway.
I appreciate the help :) Thanks
Mark

First I want to thank all the people that helped me with my problem.

A lot of people said that it was a "timing" problem.
Some of those people said that i should change the processor.

So i did, i changed it with the 800XL proc. that i had. My deceased
130XE was with a friend that was on vacation.

But the 800XL proc. didn't work. But the deceased 130XE proc. DID
work!!!!!

I'm very happy now.

Thanks!

Louis

For individual bytes, you need to be in concurrent mode (XIO 40). Then it is
simply doing a STATUS command on that channel, then PEEK(747) will tell you how
many bytes are in the buffer.

Hope this helps.
```

Hi,

I have a 600XL, 800XL, and a 130XE is on the way.

I have all stock OS's in these machines. I have looked at the
FAQ and know only a little about them.

I'd like to hear from those that have upgraded their OS so
I can figure out which one (ones) I'd like to try.

I may not put the same OS in all machines so I have a mix
of systems/OSs to play with.

Thanks,

Brian

There is one company in Tjechie that sold RAM-Carts in the past...

AFAIK they're not available anymore. Carts where made from 256KB to 1 or
4Mb (I think).

I heard they would not work (properly?) with Sparta-Dos. BeWe-Dos however
would work.

The name of the company is JRC, and they have a site somewhere on
internet, but they don't do post-orders outside Tjechie, Poland and
Slovakia...

I suppose the STATUS command should be used for that.
But doing anything else besides RS232 is a bad idea. The 850 needs to be in concurrent I/O mode. This means that the 850 module has control of the SIO bus, not the computer. This means you can not do any I/O to the disk, nor can you use POKEY, since it controls the bus.
If I am wrong somebody please correct me. This is why I never bothered to do real programming with the 850 stuff. A black box works better, since it does not need the serial bus.
But a status returns without waiting as far as I can remember, so what would be the problem?

Yep, I even have some old disks from the Decatur 8 bit Atari users
group from back in the 80's that has his name and parents address on
them along with something about them being donated by Starfleet
Software.
I really should burn them, no telling what kinda viruses are on them
(and I don't mean the kind your computer gets).

Yes the bonehead and his entire family live in Decatur.

1037 W Leafland
Decatur,Il

I assume it is in a run down part of town. If not I am sure his house is a dump. Since it is the the presumed epicenter of the "famous" Ortman Enterprises/Starfleet Software I assume we all would LOVE a scan of the Ortman residence with Terri's old Ford (up on block in the driveway) posted for eveyone to enjoy. Can you accommodate us?

Thanks

Ron

Hi f0lx!

Are you looking for Atari8 bit pages with demos and games?
Try pages of slovak atari8bit computer group GMG...

http://rak.isternet.sk/lego/gmg

- great demos
- Dynakillers (Dynablaster clone) free! (English and German documentation)
- nice atari screenshots
- links to other great WWW pages
- news!!!
- updated very often

best regards...

Hallo Leute!

Ich habe vor einigen Jahren das Wirtschaftsspiel KAISER vom ATARI 800 XL
(gab's auch fuer Commodore 64) auf den PC (MS-DOS) in Turbo Pascal
uebertragen. Es ist spielbar, hat aber keinen Schnickschnack (wenig
Grafik, nur Pieps-Sound, keine Endzeremonie). Da ich immer wieder von
Leuten nach einer neuen Version gefragt werde, selbst aber keine Zeit mehr
dafuer habe, suche ich nach Leuten, die Interesse haben, das Programm
weiterzuentwickeln. Notwendig sind Borland Pascal 7 und ein paar
Programmierkenntnisse.
Die aktuelle Version 4.21 kann unter
http://www.gris.uni-tuebingen.de/~oredner/kaiser
heruntergeladen werden. Schaut sie euch an, vielleicht habt ihr Spass am
Spielen oder sogar Interesse am Weiterschreiben.

Antwort bitte per e-mail (oliver.redner@student.uni-tuebingen.de)

1665. Speech synthesis on Atari?

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-13 00:00:00 UTC
From: Gareth <garethd_@dial.pipex.com>
Message-ID: <6qutlk$oh3$1@plug.news.pipex.net>
Source record: 60781

If I remember correctly - it was many years ago - the only game I ever came across on the Atari 8 bit to use speech synthesis was Ghostbusters by Activision (disk version.) Were there any others which used speech? Was there a reason why the Atari 8 bits used less speech than the C64 and even the ZX Spectrum in games? I assume it was a limitation of hardware sound capabilities.

Nadral, Kissins Kousins, Whomper Stomper, Berzerk.
There was also software using SAM.
I remember some demos which used digital music...

I also have software which is able to digitize music from dataset and then play it back. I'm not sure if it uses so called TURBO2000, which is dataset modification for higher speeds.

Bye,
Jindroush

Well, I guess you assume wrong, since the Atari uses digitized sound on a
lot of stuff, demos from Poland and such. I think the Atari hardware is
quite capable of producing speech, at least better than the ZX Spectrum!
SAM can be used in BASIC programming and there's a game called Mirax Force,
which has good speech. Take Atarian care

1668. Re: Emulators; specifically, keyboard mapping in Atari800win

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-13 00:00:00 UTC
From: cfchiesa@cyber1.servtech.com
Message-ID: <6qvdm0$i6k@cyber1.servtech.com>
Source record: 60784

Since we're on the subject of emulators, with both D. Firth and J. Duerstock participating...

If I haven't said it before, I'm DELIGHTED with Atari800win, an excellent evolution of -- as I understand it -- its predecessor Atari800. I've been having a blast playing old video games and looking at (new, to me!) AtariToons "movies," and so forth, on the otherwwise-largely-useless WinNT PC my employers have me using!

The only trouble is that I don't have a number of important keys, and the documentation/readme file glosses over the issue.

Specifically, NO key on my PC keyboard appears to map to any of the following Atari keys:

CLEAR SCREEN
SHIFT-INSERT (insert line)
CTRL-INSERT (insert character)
SHIFT-DELETE (delete line)
CTRL-DELETE (delete character to right of cursor)
BREAK (available on a pulldown menu in Atari800 on Unix/VMS, but NOT in Atari800win)
TAB, SHIFT-TAB, CTRL-TAB

The absence of these keys, as you can well imagine, makes even simple tasks rather complicated. I have to warmstart whenever "pressing BREAK" would suffice, for instance -- often losing the "state" of something I wanted to examine. Screen-editing is all but impossible. I'd really love to know where these keys might be hiding. The doc merely handwaves about these keys being mapped to PC keys "located in the same general position as the corresponding Atari keys," or words to that effect, which in any case doesn't help me.

At the same time, many PC-keyboard keys appear to do NOTHING in Atari800win. There's plenty of room for "someplace to put" the "missing" Atari keys, if there's any straightforward way of "remapping" them to the "unused" PC keys.

Jason...? :-)

Thanks for the info Jindra and Vidar. I'm a bit surprised that more games didn't use speech on the Atari 8 bits. I could be wrong but, as an example, from what I remember there was a game called "Beach-Head" for the C64 and Atari. The C64 version (tape and disk) had speech but the Atari version didn't. There were quite a few games like that - games which featured speech on the C64 version but not on the Atari version.

Gareth.

"E.T. Phone Home" also had voice synthesis, but all it was was E.T. saying
those very words once you put the phone together. I remember there was
some game from Germany that had voice synthesis, but the name escapes me.
"Kennedy Approach " had some cool voice synthesis as well. The distorted
sound actually was a very nice fit, since it gave the feel of the control
tower's transmission.

Berzerk for the Atari 8-bit computers also has voice synthesis. AFAIK, it was never released commercially. I have a prototype cart. When you press the OPTION button, you hear the different bits of speech at random pitches.

I think Berkeley Softworks(sp) sort of used the Atari as a test site for
their speech system. The CBM got more speech possibly because of the
superior sound chip (Even tho I heard Sanxion music on the 8bit and it
was stunning)..

Games like Chimera were speechless on the Atari but not on the C64.
Remember the C64 was a later machine...

You're welcome! I too worked with 9-track drives, but in the 90s, not the
80s. I didn't have to align 'em, though; I just wrote programs to access
'em and let somebody ELSE worry about the "hardware end of it." :-)

My head-alignment experience comes direct from the audio-cassette world;
been doing THAT since I was about 12, and learned about head-alignment
only after ERASING a bunch of tapes that I thought had "gone bad" because
they "sounded muddy" after a few weeks on the road on a family vacation.
Turned out the tape recorder was WAY OUT of alignment after that trip;
little had I known! :-)

>I can say it's clean. It wasn't pinched when it was stored.

<nod>

> Am I crazy in
>thinking there was a turbo mode I used to put it in to save or load?

There is no "turbo mode" in the built-in Atari OS cassette-handler, but
there have surely been a few third-party products that "went to the hard-
ware," changed a few settings, and thus provided something one MIGHT
consider a "turbo mode." If you didn't buy such a product, though, you
probably DON'T have a "turbo mode."

>Most of the saved files seem to load one block and then the pitch changes. It
>gets higher for 2 or 3 blocks then stops with the 143 serial checksum error.

That actually sounds pretty close to normal. The first part of a tape
file, IIRC, is a calibration pattern that the OS uses to compensate for
MINOR (not MAJOR, unfortunately!) variations in tape speed... Those have
their own characteristic sound, and then the data begins in earnest and
has a DIFFERENT sound. Or something like this.

Hmm, if you're using an XL series, you can get a program (such as the
"Translator" disk that reverts the machine to the old 800 OS) that puts
the OS code into RAM rather than ROM; under THOSE circumstances, and armed
with a copy of the proper page of the OS source code, you might be able
to patch the cassette handler to accept a wider range of variation in
cassette speed / signal frequencies... I don't know this for a FACT, but

it MIGHT be possible; any of you hackers know for sure? In any case, it's
a long shot ('specially if you're not a ML hacker!), but I had to mention
it...

>I think my old computer had an omnimon os switch. Would that effect anything?

I do not know... Never had omnimon, myself... Try anything-and-
everything you can think of!

>I'll have to try and load my sinclair zx81 frogger tape to make sure I'm not
>loading the wrong tape :)

<nod> Good idea. :-)

>It's probably high school history papers anyway. What format did atariwriter
>save in with cassette?

Don't know. Didn't know AtariWriter WOULD "save with cassette." Shows ya
how much *I'VE* used cassette the past twenty years...

>Anyway.
>I appreciate the help :) Thanks

You're welcome.

Ah, boy, does THAT bring back memories! I was around for the original introduction of CC65-on-the-Sun-SPARC, and had quite the conversation with John Dunning about my trials and tribulations in getting the thing to WORK AT ALL on SPARC/SunOS... I didn't know Unix, any of the standard tools, or C, at the time, and was having a HELL of a time. I still have printouts of the conversation.

I remember I got at least the compiler portion working, and maybe the assembler, but never did get around to working with the linker. Then my employers got rid of the SPARCstation and it's been years since I saw one. Until, as it happens, this past February; as of 2/16 I am working in a Sun SPARC environment again, and know a LOT MORE about WHAT I'M DOING, this time around! Hadn't thought of trying CC65 again 'til you mentioned it, but would be interested in doing so, now that you HAVE! :-)

As for source code... I have NO IDEA what's on the Umich archive; all MY stuff came directly from John Dunning (via e-mail, in UUencoded form at first). I KNOW I still have the disks, and they MAY include source code.

Oh, and as a final fillip, when John Dunning got OUT of the Atari line, he sent me his original development disks -- or so he said; they're in XF551 format and I've never been able to READ them. Anybody have an XF551 for sale CHEAP? No telling what I might be able to upload now that the Net is in full swing (it wasn't, really, at the time _I_ was involved with John and with CC65)!

The arcade classic "Berzerk" (sp?) was for years the ONLY game that had
speech, on the Atari or ANYWHERE. :-)

I don't recall speech in the version of Ghostbusters _I_ saw, BTW. Then
again, I stunk at the game, so if it only came up after one had made some
progress, I WOULDN'T have seen it...

>Was
>there a reason why the Atari 8 bits used less speech than the C64 and even

YES...the full disk version DID have speech...

You get a laughing gruff voice at the title screen that says
Ghostbusters before it plays the Ghostbusters title music..

Speech (as always) by Berkeley Soft works

Played it loads but tested it 100% 2 secs before the post.

Paul Irvine wrote in message <35e34ef0.21268086@news.demon.co.uk>...
>Games like Chimera were speechless on the Atari but not on the C64.
>Remember the C64 was a later machine...

Of course, there was also the reason that there were a lot of 48K Atari 8bits
out there (or so the games companies seemed to think), and a lot of Atari games
were designed to fit into 48K. (Shame they didn't do more enhanced versions of
games for 64K). And remember that samples use a lot of memory on a small machine.

Anyway, another game that had software speech was Mastertronic's 180 (darts game). For some reason the screen went blank when it did this, and when I came to
write my own sample playing routine it didn't work until I did the same thing. (Why?-
this question was also asked in New Atari User a while back..) I know it's possible
to play samples with the screen on, since CodeMaster's Grand Prix Simaulator does
it (albeit fairly crudely).
BTW, the Atari 800 is sometimes quoted as having "8 bit sound" (ie 256
tones), but in terms of volume levels (standard measurement), it only has four bits, which sort of limits the quality, although at low playback rates this shouldn't make such a difference.
(The Amiga had 8 bits which was bloody good in its day, and CD players and most
modern PC soundcards have 16 bits).
Of course, you don't neccessarily need to use samples to get simple speech synthesis...

Howdy folks

Larry White and Louis Van Eijk said:

Re: Problem with 130XE and BlackBox

Louis: "I have problems with the BB,
when hooking up the BB to the 130XE

Larry: "I had a similar problem with
my set up once. I had upgraded to a
new version of the US+ O/S from CSS,
and my BB?HD would no longer work
reliably. Bob placed a text file on
his BBS called "STABILXL", as I
recall, and it describes two fixes
that can be used to correct some
(timing) problems that afflict some
computer/interface devices. I show
his BBS as 716-247-7157. Hope this
helps."

I had this problem with the 130XE
two. The 65XE and 800XE never had a
problem with the BB/FB. Atari used
bad "Mexican" CPU's. They work on
standard Atari's, but cause problems
if you add memory or PBI devices.

I've changed the CPU. It worked.
But also made the changes suggested
in Bob Puff's STABLXL file. Just to
be sure. It contains THREE
modifications (one to the BB). But
be carefull, sometimes Bob mentions
the wrong pins for a certain
computer. A file, written by me,
containing them (I have it here
somewhere, question is _WHERE?_) is
called MOD_STABLXL. I believe I
uploaded it to CSS-BBS. But people
willing to called the Netherlands
(last time I asked Louis lived here)
can call Thunderdome BBS. It's NOT
online 24 hours a day. The SysOp is
reading this group, so maybe he can

tell you the exact online times and
the phone number. You will find the
STABLXL text there too.

The last issue was designated N0.7.
Came out about a year ago... are you
missing one?

I understand about the cost of
mailing over the "pond". How would I
go about organizing the Demo folks
over there? Are you volunteering?

Hmm, can not remember ever getting
anything after the RED issue. If you
could tell me what was inside, maybe
I'll remember. But I don't think
I've got it.

Re: contacting the Demo people

Oops, don't know. Maybe those of us
reading the 8 bit mailing list
(William Moeller is one of them)
could ask them. Or maybe even Fox-1
could help. He's been to an Atari
Meeting in Poland last weekend.

Me volunteering? I don't know these
folks. I'd like to help with other
things, but don't know how. What I
like most about PC's is the fact that
you can switch them OFF. So I'm not
much help there either. I tried to
upgrade from ACROBAT reader 2.0 to
3.0 some time ago. Now I get this
funny error. I found out that you
can trust on sales peoples knowledge
just as you can trust the Microsoft
stuff they sell to run reliably.

But I might write an article for AC.
I just have to start... :-)

Larry Write said:

"At one time there were some ram
carts advertised that as I recall ran
from 8K to maybe 64K. I don't
remember much else about them.
Anyone ever see any plans for such a
device? Or maybe sold in Germany or
Poland?"

Atari Classics had a small article
about the Yorky RAMcart. It had
256kB onboard, but (as far as I know)
were not BlackBox compatible. I
believe the article was printed in
the "Ben Poehland" area.

Didn't some company have 256, 512 and
1024kB cartridges? They advertised
in Analog (atleast between issue 45
and the time Analog was taken over by
idiots (the fonts, the layout, the
contents and the paper made the thing
horrible....Why did I EVER pay that
much money for something like
THAT???).

An external BlackBox compatible
RAMupgrade shouldn't be to hard to
realise. We only have to figure out
how to use PBI device
numbers/devices. I believe it would
be an advantage if the RAMupgrade
would be "invisible" to the computer
unless accessed, just like the
BlackBox is.

Howdy folks

Re: formatting the other side of a disk on the XF551.

1) Punch in a extra indexhole and write protect hole. Be very carefull (especially on the indexhole, to only cut the "outside" of the floppy, not the disk itself.
2) Or buy CSS XF enhancer
3) Or try to find "flippies". Yes, some companies produced floppies with indexholes on BOTH sides.

Re: Virus

Atari Classics mentioned one (some time ago). It was found on (of all places) the ICD BBS and deleted files with common extenders.

Re: 1020 pens

If you need new pens (b/w or color) contact ABBUC in Germany. They still have them, pretty cheap. Their (smail mail and Email) address can be found in the FAQ. Or find a link to their InterNet site and order online. The also have e.g. new XEP80's for US$ 12 incl. postage (or something in that neighborhood) worldwide.

B&C Computervisions (also in the FAQ) also seems to have 1020 pens and stuff.

CU Mathy Van Nisselroy

PS The ABBUC is holding their yearly meeting at October 24th at the Buergerhaus Sued in Herten (near Bottrop) in Germany. Entrance if free. Non-members are asked to pay a little fee. See the newest developments in hard and software.

```
Or buy wellknown software for e.g.
US$ 5 (yes FIVE bucks). Or buy
Polish software for TEN bucks.
```

I would be interested in whatever you want to share. I've got it all
running (from the stuff off umich). I've written a few hello world's,
and a couple of XIO tests which all work fine on "the real hardware."
I purchased an 850 interface, which seems to work, so I'm going to
start on my little project. It's probably not to hard to guess what
my goal is... ;)

I can tar the compiler tools if anyone is interested. It should also
work equally well hosted on a Linux box.

I'm using some of the .obj libraries (like the XIO one) which I don't
think we're written by Dunning, and while they work, that's the source
I'm interested in.

The heyday for a unix hosted cross-compiler for the Atari 8-bit is
probably long gone, but I started out on an old 800 and need some

closure.

Bob,
If it can handle descent size hard drives, EIDE Zip drives, CD ROM
drives and has industry standard RS232 and parallel ports, count me in.
I have one of the old 256K ones and that works pretty well. I like the
on board RAM. I usually boot from it. This time, though, the RS232
should be UART controlled.

Is THAT what that sound is? :-) Never realized it was "Hiya!" :-)

Now that you mention Alley Cat, I've always been really impressed with the
"cat" and "dog" sounds in that game because, to my ear, rather than being
SAMPLES of "real" cat/dog sounds, they seem to be cleverly-composed
sequences of simpler "tones." I have great admiration for whoever worked
out these sequences, 'cause *I* can't even produce a realistic "bird
chirp" that way, let alone "cats meow," "dog/cat fight," etc.! :-)
Anybody know more detail about HOW it was done in Alley Cat?

That's impressive. I'll have to check out what's on UMich. I remember
having a problem where the C compiler generated 6502 assembly source in
LOWERCASE, but the assembler expected it to be in UPPERCASE... Could NOT
figure how John D. had gotten it working at all under such conditions.
Maybe he had case-insensitive I/O or something... :-)

>I've written a few hello world's,

Ah. I see. Yeah, those DID come from a prior product if I recall
correctly. I'm pretty sure John "said which," though, in that
ongoing conversation "when _I_ was pounding away on the SPARC;" I'll check
my archives and see if I can dredge up the package name. But I'm

constantly "on the hop" and have a lousy memory, so you'll want to KEEP REMINDING me... my e-mail address is all over this newsfeed lately...

>The heyday for a unix hosted cross-compiler for the Atari 8-bit is >probably long gone, but I started out on an old 800 and need some >closure.

back..) I know it's
>possible to play samples with the screen on, since CodeMaster's Grand Prix
Simaulator
>does it (albeit fairly crudely).

The problem is that ANTIC steals cycles away from the CPU, leaving fewer for the CPU. Also, these cycles are not stolen evenly across/down the screen (i.e., instead of stealing every 8 cycles, for example, it steals more at the start of scan lines than the middle, also, it steals more on the first scan line of text than later lines). All of this is VERY difficult to keep track of and trying to get a consistent playback rate for digitized audio can be nearly impossible. As a result, many programs will disable ANTIC (the screen goes black), and may only work in certain graphics modes.

>BTW, the Atari 800 is sometimes quoted as having "8 bit sound" (ie 256
>*tones*), but in terms of volume levels (standard measurement), it only has
>four bits, which sort of limits the quality, although at low playback rates

With some extra work, you can use all four channels together at different levels to get 64 levels (not necessarily linear).

I seem to recall that the Game BERZERK for the Atari 8-bits used to talk, and there
was also an entertaining utility called "S.A.M" or Software Automated Mouth, that contained
libraries of machine language routines which would supposedly allow you to add speach
to your own programs. I remember the accent was kinda thick, and you had to type
the speach phonetically, but it did chatter up a storm!

>description, let me know!

The best 8-bit term, hands down was/is BobTerm. I think 2.32 was the last release. (It's been a while). It supports VT52, not 100, but it is the best 8-bit term there is.

Oh, and you're using the MPP 100C modem? As long as you have the drivers, BobTerm can handle it. In fact, it can load them seperately.

There is an 80column VT100 term I used called VT10^2. Look around for it. Nice, but a tad slow, but fine for your modem.

Bob-

>Are you advocating a PBI IDE device? Basically, an MIOII? Is there a
>market for such?

A tough question to answer. The MIO was
(in my opinion) a wonderful device. They
did have some reliability problems. The Black Box is also a fine product, an
"updated MIO" but without the ram disk (and I loved the MIO stand-alone ram
disk). But then
you add the Floppy Board to the equation -
maybe, because Floppy Boards are not
available (unless CSS has started production
recently). So, the question is really, I think,
does the Atari market need an MIO II and the
Black Box. If the MIO II is a IDE interface,
and thats all, and it's inexpensive (say less than
$80 or so), then there might be a market. If it
is really an Multi-I/O device, then it would
have to be full-featured, and there would
probably be a smaller, but probably higher
margin market.

The Atari needs:
Hard drives (got that)
Removables (got that)
Fast Floppies (not so important if using removables, but got that,
maybe)
External or easy internal memory upgrades.
Good 80 column (Almost had that with MIO,
and someone we know of and truly
admire is rumored to have one again.
A 16 bit upgrade (had that, and maybe again.)
Good VGA-class video (for 50+ year old eyes, and this may exist
today)
Accelerator (at least for text mode)
CD Rom support for Hard Drive (supposedly
exists for one of the European IDE's?)
I would buy/support a lot of this stuff in a
heartbeat - if I knew it was available and worked.
Larry

1729. 850 driver locates at???

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-16 00:00:00 UTC
From: chrisw@srv1.thelanlab.com
Message-ID: <35d623a4.225534963@news.alterdial.uu.net>
Source record: 60695

I disassembled the AUTORUN.SYS which loads the 850 driver into memory and got it running from inside the C program I'm working on, but I'm wondering where the driver is actually getting loaded in memory. I've set the base for my app to $3800, and I don't seem to have any conflicts, but I'd like to move it back down around $2000 which I think is the default origin for the C compiler I'm using. (CC65). Obviously I'd like to avoid getting stepped on when the 850 handler gets loaded in. I need to break down and buy the 850 techincal reference manual I suppose, but I think it's going for about the same price as I paid for the 850 itself!

regards,
chris

I updated my page a bit. There is some of the 850 manual there. I will get around to finishing it sooner than later I hope..

By the way, I worked on OCR'ing some of De Re Atari a couple of months back, and somebody else even posted a couple of chapters. I seem to have lost mine, if anybody has them please post or email them to me so that I can finish it and put it on my page er something.

Also, Whomper Stomper says in the intro "Welcome to Whomper Stomper" (i
also assume that digitized samples are a 'go' for this thread..)
and, in Castle Wolfenstein, not only was Acktung! said, but,
Schweinhundt! Komerade! and a couple of others i can't remember... (i
don't spell German either) :)
3rd: a friend of mine bought Ghostbusters and i don't remember it
talking..(i'd have to check, i cracked his original and still have a copy
somewhere) but, my out-n-out pirated version DOES speak not only at the
beginning, but everytime you hit the space bar during the intro song...

1734. FT: Atari 8-bit Infocom games in MINT condition!

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-16 00:00:00 UTC
From: rpribish@wheel.dcn.davis.ca.us
Message-ID: <6r65du$k3h$1@mark.ucdavis.edu>
Source record: 60700
Cross-posted to: rec.games.video.classic,rec.games.video.marketplace,comp.sys.atari.8bit

I have the following Atari 8-bit Infocom disk games available for trade.
These are all in MINT condition, containing ALL of the contents and extras
to all of these games in MINT condition! All the boxes are mint/excellent
condition - only Hollywood Hijinx has a very slight bend in the front box
cover. All these games require at least 48K of RAM.

Ballyhoo
Cutthroats
Deadline
Hitchhiker's Guide to the Galaxy, The
Hollywood Hijinx
Infidel
Leather Goddess of Phobos
Lurking Horror, The
Moonmist
Planetfall
Plundered Hearts
Starcross
Stationfall
Suspect
Suspended
Zork III (Zork I, II & III)

I'm only looking for 2600/8-bit cartridges I don't have -
my have list is at: www.pribish.com/atari.html

Thanks, Reinhard

I recognise some of those games (and even wrote one of them). A lot
of those titles look like being of European origin. As to where they
can be found, if they're not on one of the archive sites, then *shrug*

Looking for info or a web that describes the sound chip in the 8-bits
pretty well. I know we've got 4 voices accessible through the SOUND
command in basic, but are there registers I can poke (a la C64) to
accomplish the same effect? What kind of waveforms do we get?

Any info would be greatly appreciated. Thank you all!

1738. Re: Fair Pricing Index for Atari?

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-16 00:00:00 UTC
From: Jason Whorton <jason@microxl.com>
Message-ID: <6r7k44$s4m$1@supernews.com>
Source record: 60704

Hello. After reading this post, I thought I could provide some information that might help the original poster, as well as perhaps others.
First, eBay prices fluctuate on the very same item and the exact same set-up is often not offered, therefore making your calculated average price being based on too many variables. I would suggest you check out other auction sites and attempt to find old posts from this newsgroup in www.dejanews.com. I buy and sell old computers myself and have read various newsgroups for over 1.5 years and try to keep in mind a fair value on items. I usually ask $15 - $20 for basic set-ups on non-rare platforms such as the Atari 400, Commodore 64, Texas Instruments TI-99/4A, Tandy CoCo, and Apple IIe. For example, I am currently negotiating a deal with someone who is to buy an Atari 65XE and power supply for $15 and an Atari 400 without power supply for $10. Items such as RF converters, manuals, cartridges or disks, disk drives, tape drives, etc. will of course add to the total price. Some items are harder to find than others and the prices people have paid pretty much reflect that. Some people are able to luck up and find package deals at yard sales and thrift stores that do not reflect what the items usually sell for. Also, please consider whether sale prices are from dealer to dealer, dealer to user, user to dealer, user to user, or other.

Thank you,
Jason Whorton (clicking on plain text instead of rich text)

peter <71farago@extra.net> wrote in message <35D611AB.68212762@extra.net>...
In an attempt to compute fair purchase prices for Atari 800 computers, I have collected the following from 3 months worth of auction sales at ebay. Here are the results. If anyone has a better notion of how I might come up with a better index please let me know. I would like to start collecting and need to compute fair prices.
I believe that a regular audit of sales would produce the most legitimate index but ebay is the only market I have found. Will report on what I find at the Atari Show in Las Vegas soon.

Best

So, I've tried to get my autoduel images to run on real atari hardware (1200XL, 800XL, and 130XE) using APE and also using real disks with no luck. Everytime I choose to practice in the arena, the game accesses the disk and freezes. I am guessing that the images in the archive are corrupted? I gave up my originals quite a while ago and would really like to play this again. Please let me know if you have had similar problems or if you managed to get it to work. Thanks -Dan

I've had exactly the same trouble trying to run with AtariWin 2.3 (and earlier versions) and yet people tell me its working. Can anyone give the address of a KNOWN working ATR set for Autoduel? I would love to get this guy working again too!

-Nick

1742. Definitive Known Software Lists (cartridge and CD) [08/17/98]

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-17 00:00:00 UTC
From: VideoGameAdvantage@DittosRush.com
Message-ID: <35de1355.1356534@nntp.ix.netcom.com>
Source record: 60708

The Video Game Advantage Definitive Known Software List Collection

If you are looking for the most complete, detailed software lists available you have found them. And the best part is that they are all in a standardized format, so you can change system files without having to learn a new style or format! Currently 32 of the 40 planned files are on-line (2600, Intellivision, NES, Odyssey2, Sega CD, SMS, SNES, and TG-16 all still need some work, and will be on-line as soon as possible).

32 bit and 64 bit video game systems:

3DO REAL Interactive Multiplayer
Amiga (?Commodore?) CD32
Atari Jaguar / Jaguar CD
Nintendo 64
Nintendo Virtual Boy
Sega 32X
Sega Saturn
Sony Playstation
Tiger Game.Com

16 bit video game systems:

Philips CD-i
Sega CD
Sega Genesis
SNK Neo Geo / Neo Geo CD
Super Nintendo

8 bit video game systems:

Atari Lynx
Nintendo Entertainment System (NES)
Nintendo Game Boy
Sega Game Gear
Sega Master System (SMS)
Turbographx-16, CD, & Duo

Classic video game systems:

Atari 2600
Atari 5200
Atari 7800
Bally Astrocade
Colecovision
Emerson Arcadia 2001

Fairchild Channel F
GCE Vectrex
Magnavox Odyssey2
Mattel Intellivision
Milton Bradley Microvision
RCA Studio II

Classic computers:

Atari 8-bit computers
Coleco Adam computer -- see Colecovision
Commodore 64 / 128 computers
Commodore Vic-20 computer
IBM PC Jr. computer
Mattel Aquarius computer
Radio Shack Color Computer
Texas Instruments TI 99/4A Computer
Tomy Tutor 16-Bit Graphic Computer

*****

If this is of interest to you, the URL is:
http://www.io.com/~vga2000/

and the link is in the "Collectors Corner" section.

And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

Michael

P.S. My old e-mail accounts all still work, but I'd prefer it if
people would begin to use the *new* account. Thank you!

NOTE: If rec.game.video.classic holds true to form someone
will follow up my announcement with lies and/or attacks. I left
that newsgroup approximately 2 years ago, and except for 2 days
in August 1997, I haven't read or posted there since (unless it was
to cross-post an occasional web site addition announcement or,
when I still did so, to occasionally cross-post four -- not 6 -- FS/T
lists).

However, I still receive e-mail from people who tell me that some
there are STILL talking about me. Very touching, now grow up!

For the record, I will continue to cross-post these types of
announcements there because the vast majority of the people
on RGVC probably enjoy video game related activities more
than the RGVC tradition of seeing how far you can stick the
"verbal knives" into someone.

If you are tired of wading through the lies and attacks here on
Usenet, and you would like to know my real position (on anything),
as opposed to what some with tell you is my position, then you

should either pay attention to what I say (or have said), or you
can ask me. I'll be happy to detail my TRUE position for you. :)

Buying/Selling/Trading video game systems Michael J. Novak Jr.

> "..."

Brian,
Yes and no. Yes there are memory locations. No in that the C64 uses the
SID and the Atari uses simple clock division to pick the frequency and a
noise masking technique for other sound effects.
The memory locations are:
Audio Control 53760-53767 bits: 7 6 5 4 3 2 1 0
53760=audc1 Distortion Volume Volume
53761=audf1 (noise) only level
53762=audc2 0 0 0 0 0 0 0 0 lowest
53763=audf2 0 0 1 0 0 0 1
53764=audc3 etc. to:
53765=audf3 1 1 1 1 1 1 1 1 higest
53766=audc4 (forced
53767=audf4 output)

Bits: 7 6 5 distortion
0 0 0 five bit, then 17 bit, polys
0 0 1 five bit poly only
0 1 0 five bit, then 4 bit, polys
0 1 1 five bit poly only
1 0 0 17 bit poly only
1 0 1 no poly counters (pure tone)
1 1 0 four bit poly only
1 1 1 no poly counters (pure tone)

Audio Control 53768 7 makes the 17 bit poly counter into 9-bit poly
6 Clock channel one with 1.79MHz
5 Clock channel three with 1.79MHz
4 Join channels two and one (16 bit sound)
3 Join channels four and three (16 bit sound)

2 Insert high pass filter into channel one, clocked by channel two
1 Insert high pass filter into channel two, clocked by channel four
0 Switch main clock to base from 64KHz to 15KHz

beeps 64,65 64 counter for tape beeps during the OPEN command
65 I/O Disk beep. 0 turns off >0 turns on

buzz 61530 CLOAD beep in cassette handler

keyboard speaker 53279 Used to control the tone of the console
speaker click/buzz
(400/800)
margins 63

Hope this helps. For full details see "Mapping the Atari" by Ian
Chadwick (Compute Books ISBN 0-87455-004-1). Also see the Atari hardware
manuals, Atari's De Re Atari book and may others.

1746. Need Help with SIO2PC, Atari800win, ATR!

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-17 00:00:00 UTC
From: Kevin A Haley <khaley@mich.com>
Message-ID: <Pine.LNX.4.00.9808171231230.10337-100000@zelgadis.mich.com>
Source record: 60712

I recently downloaded the Atari800Win Emulator for my PC, it works great! In fact, I was so impressed that a friend and I built an SIO2PC cable to transfer my software and programs from the Atari to the PC.

HOWEVER, I have several questions and problems, and I'm hoping some Atari folk out here can resolve these issues.

1. As I understand it, the ATR disk image is a read-only disk image format, due to the fact that it is not in a valid Atari disk format. Hence, any disk write operation within an Atari emulator, be it from DOS or BASIC, will fail. This has been the case for me, as I get an error 160 or error 165.

Unfortunately, this renders much software useless from within an emulator. Anything that writes to disk (such as an RPG game, word processor, etc) isn't going to work in an emulator. Further, the possibility of actually saving anything from within an emulator is unlikely.

I've seen people talk about playing Seven Cities of Gold within an emulator, but it's not working for me. How do you create a world disk when it can't even write to the disk image? How do you select a writeable disk?

Are these assumptions correct? From my experience, this is what is happening. If anyone knows a way around this, I would appreciate the info.

2. A friend and I built the SIO2PC cable and hooked it up. It works quite well, the Atari can see the disk image on the PC, files can be copied from the PC to the Atari... BUT not from the Atari to the PC!

The SIO2PC instructions say that once the software is running on the PC side, you can format a new disk image and start copying files from the Atari to the PC. I have the software running on the PC side, I create a new disk image, setting it as Drive #2. Then, from the Atari DOS, I format drive #2. Works perfectly, formats the PC image successfully.

So now I have D1:, an Atari disk drive, and D2: the PC disk image which has just been formatted by the Atari, which can see both.

So I try to copy a file from D1: to D2: using the DOS Copy command. Error 160 or 165 again! Files simply cannot be copied from the Atari drive to the PC using MyDOS 4.5 or

Atari DOS 2.5 without the operation failing.

What is going on? Why can the Atari format a disk image on the PC but cannot even copy a file to the same disk image? I must be missing something, as I thought the whole point of this was to be able to copy files from the Atari to the PC.

Any assistance with this would be greatly appreciated.

TIA,
Kevin

1747. Sweet 16 Atari FA

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-17 00:00:00 UTC
From: af332@freenet.hamilton.on.ca
Message-ID: <6r9h5u$ei1$1@mohawk.hwcn.org>
Source record: 60713

I have a Sweet 16 computer I have decided to sell by auction......

I would sell it separately, but it is currently installed and working in an upgraded 800xl (256k).....

When I installed the Sweet 16, I broke the bottom part of one of the feet of the chip....it looks like this...

```
[ ]
[ ]
[ ]
-----
[
[
[
```

I dont know what this type of socket is called, but they are circular.....and the bottom part of the chip foot fits into a hole on the socket......forutunately, when the entire Sweet 16 is plugged into these circular sockets, the foot with the broken bottom makes contact with the top part of the socket and works......I was considering soldering the connection, but I thought I would leave well enough alone.....

So, it would probably be best just to leave it in and as is........

I am looking for a minimum bid of $100 US funds plus shipping for the Atari 800XL with 256k and Sweet 16 installed.....it is an NTSC machine.

One other caveat.....this Sweet 16 upgraded computer stopped working with my Black Box with FLOPPY BOARD when it was installed.....it still however, works with a Black Box.....however, it would not when I had the FB on it.....I had three black Boxes at one time, and did some testing......and it WOULD work with only a Black Box.....your mileage may vary.....

So, if there is interest, I am willing to take public bids in this newsgroup.....highest bidder which meets the 100 dollar US minimum wins.....simple....please dont bid if you are not going to send the money...

Also....I live in Canada....please take that into consideration with regards to shipping....shipping and insurance are extra....
Payment is by INTERNATIONAL money order ONLY.....for those in the USA, this is easy.....just go to the post office and ask for an "International Postal Money Order".....you will notice the domestic money orders say that they can only be cashed in the USA.....they are no good in Canada....

Anyhow, if you have any questions, please feel free to ask...

Willy

1748. QUESTRON!

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-17 00:00:00 UTC
From: "Jeffrey T. Mason" <jmason@nauticom.net>
Message-ID: <35d87b48.0@news.nauticom.net>
Source record: 60714

I was the first on the block to have a computer...it was 1984, and it was an Atari 800XL. I had the keyboard (with cartridge port), disk drive, and printer. This machine is still existant in my father's attic...I have no idea if it even functions anymore!

There is a game that I would KILL to find again...since I lost it sometime in the late 80's. QUESTRON was an adventure game, with questionable graphics...but for the time...incredible stuff. It was interactive...combining a location map, casinos, jails, battles, etc... It was on 2 double-sided floppys.

If anyone knows where I can find this game, I would be grateful. And obviously, I'd like to know if it was ever made for a PC.

Thanks!

Well considering it's being cross posted to multiple groups (7 on my
server) and it's from a commercial site then I guess it qualifies as
SPAM.

I don't know why he states that 'Less than 1% of this web site is
devoted to actual "commercial" content' since that seems to be the major
point of it - stuff is for sale.

The "meow" in this game stunned me! That's for sure.
It sounded "real" to me anyway. And I love cats...
hmmm, that's maybe one of the reasons this game is one of my favourites.

>an error 160 or error 165.
Error 160 means that a wrong drive number is specified, 165 means that the
file name spec. has illegal characters. Nothing to do with write protection
I think (error 144).
All works fine for me with the same approach you described. Make sure the
ATR is loaded in the right bay in the emulator.

Peter

1754. Atari 8 stuff & junk - you pick up, you get :)

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-17 00:00:00 UTC
From: x@x.x
Message-ID: <MPG.104298bff094947d989680@news>
Source record: 60720

There are only 3 games that I like enough to keep an Atari around:
Star Raiders, Mule, and Seven Cities of Gold.
Since I haven't really played any of these in 4+ years, and since
my wife would truly appreciate if I got rid of all the clutter in
the basement, I'm giving away my remaining Atari eq to anyone who
wants it and can pick it up within a week.
I'm not shipping this stuff (well, ok, maybe to one or two
of the people I remember from the 8bit scene, and even then they'd
have to pay for the shipping).
What I have left: various joysticks, paddles, etc mostly
working. 2 800's in good shape (should be working). Some extra
800 memory modules. One of the 800's has a 32k ram card in it.
Some atari chips and a bunch of 256k drams. About 20 cartridges,
including an rtime-8, basic xl, and basic XE I think. Several
disk drives (1050, indus, 2xXF551) with some mods on them.
(The indus is dead - power problems, I'm not sure about the others.)
A bunch of diskettes of games. Lots of documentation (I think I
have copies or originals of schematics of all the Atari's that
were widely sold), a bunch of books, some original Atari-internal
800 documentation on the CTIA and POKEY chip. A bunch of Atari
related magazines (Antic, Analog, etc). And whatever else
I happen to have lying around.

If someone wants the stuff and can pick it up in the
Torrington, CT, USA (grin) area, email me. This is essentially
first come first serve, but I want to get rid of all of the stuff
in one shot - there will be no picking through the stuff to get
the goodies. :)
If we've ever spoken/emailed before and you're really dying
to have all this stuff, I'm willing to mail it but the mailing costs
would probably be over $100.

(For those curious as to who I am, my main claim to fame is
the docs for adding a 2nd PIA, and my second claim to fame is to
never having bought or owned any ST-related piece of equipment
on the justification that I couldn't stand Commodore crap before
Tramiel bought Atari so I wasn't going to put up with it afterwards. :)

> to play samples with the screen on, since CodeMaster's Grand Prix Simaulator
> does it (albeit fairly crudely).

Long ago, in a far away galaxy...grin...It's been a while, can you tell?

Anyway, the reason the Atari can't handle digitized speech very well when the screen is on is because of the interrupts. With some really fancy programming you can get it to sound somewhat intelligible with the screen on, but you get *much* better results turning all the interrupts off while doing the speech. That is pretty much the limit of my memory these days, or I'd be more explicit.

Seeya,
Charles Hughes

1756. Help me with name of game

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-17 00:00:00 UTC
From: Brian Whitman <bwhitman@wpi.edu>
Message-ID: <Pine.OSF.4.02A.9808172237140.2816-100000@wpi.WPI.EDU>
Source record: 60722

I've been going nutty trying to remember this. I recently pulled my 130 out of storage and have been playing around with it. I lost my favorite game cartridge in the move though and can't remember what it was called to go look for a new one. Nor can I remember much about the game. Well, here goes:

There were a bunch of planets that your ship had to land on. Once oyu landed, you had to get out of your ship and go look for a certain object. Of course, the only object I remember that oyu had to get was called a "Candleabra." And landing on each planet was no small task -- it was a lunar lander type affair-- if you came down too fast, you'd crash, and so on. I remember finsihing the game up to the last planet or whatever and crashing on the landing pad. Arrgh.

Anyway, any clues? Again, i had this on Cartridge. Don't know if it was on disk or not. Have a vauge recollection of buying it at a Kay-bee for a small amount of money (during the productive years of the 8-bit, so it must not have been a well-known game.)

Best Electronics sell replacements for the Mitsumi and the Sugiyama/Action Technologies keyboard Mylars (plastic film inserts). The Mitsumi are single sheet (Best had a company make him BETTER sheets, the stuff Atari had seemed to be crap), the other one (two companies, ONE sheet) is a big sheet folded over a smaller sheet (with those you only have to replace the big sheet).

Both the Mitsumi and the Sugiyama/Action Technologies (S/AT) sheets cost 22 dollars.

Sometimes wiggling the part of the sheet that's inside the connector will help, if you have problems with the XE's START, SELECT and OPTION keys. But there comes a time when nothing helps. My 130XE has a new Mitsumi sheet. Works great. I've ordered a new S/AT sheet for my 800XE. Keys in several rows (or should I say collumns) started to fail.

>Brian

Well, I've got the UltraSpeed Plus OS in two of my XE's (130 and 65, the 800XE doesn't have one yet and the XEGS is a major problem when it comes to replacing the OS). I like it. It's made by CSS (Bob Puff). Faster keyboard, built in RAMdisk handlers, boot off any disk (1 to 9), faster and better selftest, built in FIXXL (400/800 OS), built in XL/XE OS, reversed OPTION key, screen on/off toggle, automatic highspeed/ultraspeed diskaccess (if you drive can do so), BASIC on/off, cold reset without turning the power off or losing the contents of your RAMdisk (unless your software starts formatting it as part of it's routine. MyDOS 4.53 will let you cancel that). That's what I can remember right now (I'm only 10-12 miles from home, but my arms at THAT long.) A yes, there is a GameDOS (MACH TEN if I remember correctly) in the FIXXL.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

>just what is available for game and computer systems.

The thing is he steals other people's lists, reformats them, and then claims them as his own. I too have based a few of my lists on existing work (my NES list for example). However I give credit to the original author(s), and I always have a "value added" incentive. For example, I added cart numbers and copyrights to my NES list.

A lot of my and others hard work has been plagarized into (IMHO) really ugly looking lists, and MJNJ acts like he did all this hard work. His actions are as low as they can get for Netiquette and I'd recommend you boycott doing business with him.

> > Atari folk out here can resolve these issues.
> >
> > 1. As I understand it, the ATR disk image is a read-only disk image
>
> I don't think this is true.

The behavior seems to indicate otherwise:

1. Start up Atari800Win.
2. Set D1: to DOS_25.ATR, Set D2: to DEMOS.ATR (any ATR will do)
3. Reboot (Shift-F5 I think).
4. Go into DOS.
5. Copy: D1:RAMDISK.COM,D2:
6. Results in Error. (usually 160 or 165, sometimes a different one).
7. Exit to BASIC:

LOAD "D1:ATARI800.BAS"

READY
SAVE "D2:ATARI800.BAS"

ERROR- 160 (again, or 165, sometimes something else)

8. Now, Change D2: to DOS_25.XFD (XFD disk image) still in BASIC

SAVE "D2:ATARI800.BAS"

READY (operation successful!)

9. Go to DOS
10. Select copy- D1:RAMDISK.COM,D2:
11. Operation successful!

Hence, the ATR disk image appears to be read-only from within the
Atari. The Atari ROMS/Disk Operating System cannot process the
format of the ATR file, which is different from a normal Atari
disk. On the other hand, the XFD image is a "valid" Atari
disk, and can write to it with no problems. what else would
explain this behavior?

Unfortunately, XFD is useless on SIO2PC because it only
uses ATR format.

If this is incorrect, something is royally messed up here. I
have the normal set of options enabled in Atari800Win, the
only potential trouble spot could be the SIO Patch enable/
disable checkbox (does this matter?)

> I used APE to set up a 10248 sector dd disk. Mounted it as D2. Booted mydos

> basic programs.

Copying from the Atari to the ATR works fine? It doesn't work for me,
something is messed up somewhere. I'm running SIO2PC410 from
DOS (not in Win95), I followed the instructions, the disk can
be seen from the Atari, but it just refuses to write to it. ARGH!

> D1:*.*,D2: Are you forgetting the comma? No quotations? Wait it doesn't use
> quotes does it? I can't remember.

Yep, that should be the correct syntax.

> In my case there is no difference weather I'm using the emulator or my 800xl.

> games.

The games I downloaded work great in the emulator. I just can't get my
original software transferred over.

My personal favorite is his policy on game instruction manuals. First he claims that reproducing the manual accurately is more important than "feeding egos," so he strips out the "typed by" line at the beginning of most of them... and then adds a huge advertisement for his business, justifying it by calling it an EOF marker. What a wanker.

A close second, in terms of pure stupidity, would be his attempts to copyright screenshots.

This version was released about 2 years ago. It is now available for $10.00 plus $4.00 shipping. Total $14.00.

This is the Multiline version, can handle up to 7 different modems and users calling in at the same time if you have a MUX system from CSS with the addtional slaves.

Those of you that have the older versions and want to upgrade price the same but need your Node number to update your records.

This version has all the goodies, multiline, Pro_term (phone call out) Networking (high speed compaction), Completely IBM ANSI compatable.

Can run on 4 double density disk drives with limited ability, reccomended that you have a hard drive available on you system.

ATR files are read/write, not read-only. One thing I can think of is that maybe you've got the file attributes set as read-only. You can check this under Windows by right-clicking on the file and choosing Properties. On the Properties window at the bottom are your file attributes. Make sure that read-only is not checked.

Another possibility is that your SIO2PC cable is not set up correctly. You may have the read pins wired correctly but not the write pins. Still, this doesn't explain why the ATR's won't work on an emulator on the PC.

Rest assured, though, that the ATR format is definitely read/write. I have been using my 800 and 130XE connected to my PC for over a year now, and ATR is my format of choice.

One other thing to note is that SIO2PC can create images that aren't always allowed by DOS 2.5. I've had varied results trying to get SIO2PC to create a workable image that I can format, so I chose an alternate route. I got DiskCommunicator set up on a MyDOS 4.5 image by copying the file from my H: drive to D1: (DiskCommunicator is available on the UMich archive). Then I got one of the MegaImages from ftp.hackerz.com, and unlocked and deleted all the files from the image, so that I had a clean 1MB image to work with. I set my real drive to D4: (D3: will work also), the MyDOS image to D1: and the (blank) MegaImage to D2:. I then booted MyDOS and ran DiskCommunicator to copy from D4: to D2:, supplying a name for the DCM file (extension needs to be DCM for this to work). I could copy many disks to the MegaImage at one time before transferring them to the H: drive one at a time. Once each DCM file was on the H: drive, I switched over to the PC and ran DCM2ATR on each DCM file to make it into an ATR. Worked beautifully every time. Yeah, it's a roundabout way of doing it, but it solved several problems I was

having with transferring files, and once I got used to it, I never wanted to do it any other way.

Lastly, when using SIO2PC, I recommend booting to DOS (reboot, at "Starting Windows 95" message press F8, then choose "DOS prompt only" from the menu). Even with a very fast PC, I still don't trust Windows to give SIO2PC the most accurate timings.

I hope some of this helps, and good luck!
Steven

Although I'm not Nick Kennedy (author of .ATR images),
I'll try to answer a few of the questions...
-=> Quoting Khaley@mich.com to All <=-

Kh> I recently downloaded the Atari800Win Emulator for my PC, it
Kh> works great! In fact, I was so impressed that a friend and I
Kh> built an SIO2PC cable to transfer my software and programs from
Kh> the Atari to the PC.
Good for you.

Kh> HOWEVER, I have several questions and problems, and I'm hoping some
Kh> Atari folk out here can resolve these issues.
Ok, will try.

Kh> 1. As I understand it, the ATR disk image is a read-only disk image
Kh> format, due to the fact that it is not in a valid Atari disk format.
Wrong. If you load an .ATR image into SIO2PC (or APE for that matter),
you can change the contents of the disk.
It's a regular disk, allbeit an image.

Kh> Hence, any disk write operation within an Atari emulator, be it from
Kh> DOS or BASIC, will fail. This has been the case for me, as I get
Kh> an error 160 or error 165.
I guess your SIO2PC interface does not work according to specs then.
Do you have a friend who has a working SIO2PC interface? Try that one first.
If not, order a working version (from B&C or ABBUC or anyone who is willing
to build one for you in this newsgroup).
If everything fails, I'm willing to buy one for you when the ABBUC
has his JHV this october 24th in Herten (Germany), and send it to you
(asssuming you pay the cost of the interface and the shipping).

Kh> Unfortunately, this renders much software useless from within an
Kh> emulator. Anything that writes to disk (such as an RPG game,
Kh> word processor, etc) isn't going to work in an emulator. Further,
Kh> the possibility of actually saving anything from within an
Kh> emulator is unlikely.
SIO2PC just behaves like a "regular" Atari 810 or 1050 drive.
Your Atari computer (800XL or similar), thinks it "talks" to a real drive.
So you should be able to read/write to the (imaginary) disk!
Since it doesn't do this, I presume your SIO2PC interface is not working
correctly.

Kh> I've seen people talk about playing Seven Cities of Gold within an
Kh> emulator, but it's not working for me. How do you create a world
Kh> disk when it can't even write to the disk image? How do you select
Kh> a writeable disk?

Kh> Are these assumptions correct? From my experience, this is what
Kh> is happening. If anyone knows a way around this, I would
Kh> appreciate the info.
Ok, try this checklist:
a. Connect the SIO2PC interface to your pc and Atari. Load the most
recent version of the SIO2PC software (I think it is 4.13 or later).
Load an .ATR disk image containing DOS 2.5 or MYDOS 4.53.
Boot up your Atari with OPTION key pressed.
Do you get the DOS menu?
If not:
b. Try this on another computer.
Still the same?
c. Try another SIO2PC interface.
Still the same?
d. Try another Atari.
Still the same?
You get the picture by now. Try to look for the piece of hardware
which fails to work.

Kh> 2. A friend and I built the SIO2PC cable and hooked it up. It
Kh> works quite well, the Atari can see the disk image on the PC,
Kh> files can be copied from the PC to the Atari... BUT not from the
Kh> Atari to the PC!
Ah, ok, then it seems your interface is partially working, or
the cables are faulty.

Kh> The SIO2PC instructions say that once the software is running
Kh> on the PC side, you can format a new disk image and start
Kh> copying files from the Atari to the PC. I have the software
Kh> running on the PC side, I create a new disk image, setting
Kh> it as Drive #2. Then, from the Atari DOS, I format drive #2.
Kh> Works perfectly, formats the PC image successfully.
If you can format the "disk", you should be able to write to it too
as far as I know...

Kh> So now I have D1:, an Atari disk drive, and D2: the PC disk image
Kh> which has just been formatted by the Atari, which can see both.

Kh> So I try to copy a file from D1: to D2: using the DOS
Kh> Copy command. Error 160 or 165 again! Files simply cannot
Kh> be copied from the Atari drive to the PC using MyDOS 4.5 or
Kh> Atari DOS 2.5 without the operation failing.
Put the disk in D1, Load the (formatted) disk image in D2 on your pc.
Turn off your Atari, and REBOOT. Go to the DOS menu, and
try copying the files now from D1 to D2. Does this work?

Kh> What is going on? Why can the Atari format a disk image on the
Kh> PC but cannot even copy a file to the same disk image? I must
Kh> be missing something, as I thought the whole point of this
Kh> was to be able to copy files from the Atari to the PC.

Kh> Any assistance with this would be greatly appreciated.

Kh> TIA,
Kh> Kevin

Let me know if anything I was babbling about helped you in any way...
Bo.

Just a few remarks about auctions and "For Sale" adverts in this ng.
<Flame on>
Sometimes stuff is offered for outrageous prices.
Of course collectors won't mind that, but for the "beginners" amongst us
(and I'm not one of them) it will seem those prices are "normal".
And they aren't.
My advice it to look around on flea markets, garage sales, etc. first,
before spending a lot of time in these (overpriced) auction areas.
Or visit your local Atari 8bit usergroup, or set one up.
I can remember S*P*A*C*E meetings in the Seattle area and software/hardware
auctions over there who were fun, and the prices were right.
Software for just $.025 or less. Hardware for laughable prices.
Over here in Holland I got an Atari with Tape drive for a mere $1,
sold the Tape drive for $1 (someone on that flea market asked me if that
tape drive was for sale), and ended up wit having a free Atari.

Together with some Atari friends we purchased some remaining Atari
inventory. We sold a lot of Atari software and hardware REAL CHEAP.
But then agai, we were not looking for profits, but just trying to
help the Atari community. The ABBUC gave away free XEP80's to their
members, once again just to help the Atari community.

Am I against auctions? No, this is the a place were collectors can
expand their collection for sure (for a price).
Are some people asking unreasonable prices? Yes, definitely.
Are some people willing to pay them? Most certainly are.
Everything's worth what a fool is willing to pay for it.

Lately it seems like that if someone has something with an Atari logo on it,
he/she thinks it is "rare", "special", "funny" and worth a lot of money
to say the least.
If it is really that "rare" it would have been auctioned at Sotheby's.
If it is really that "funny", why part from it.

Ok, ok, I'm rambling here.
Just wanted to get this of my chest.
<Flame off>

Do yourself a favor if you're a beginner (or advanced user for that matter :)
if you really want to support the Atari, buy some stuff from your local
Atari usergroup and join them.
Sign up for an Atari newsletter (if they still exist).
Buy some new (Polish) software.
Buy some new hardware (BB or IDE interface from Germany).
Post something about your Atari experiences in this ng.
Build SIO2PC interfaces, and sell them for a reasonable price.

And for auctions, well, bid laughably low and try to get away with it ;)
Let me know what you think.

Bo.
Working on Pooldisk Too CDrom (to be released on October 24th).

1782. FS: Too much to auction individually!

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-18 00:00:00 UTC
From: sripkowski@my-dejanews.com
Message-ID: <6ravv5ogd1@nnrp1.dejanews.com>
Source record: 60728

I am selling the following Atari stuff. All of it works and is in good shape!

Atari 130 XE Computer: $50.00 (w/power supply)
Atari 800 XL Computer: $25.00 (no power supply)
Atari 1050 Disk Drive: $25.00 (w/power supply)
Atari 1010 Tape Drive: $10.00 (in box with everything it came with)
Indus GT Disk Drive: $50.00 (w/power supply)
Indus GT Disk Drive: $50.00 (w/power supply)
Atari CX85 Keypad: $ 5.00 (w/programming manual)
Atari Deluxe Trackball: $ 8.00 (new in box)
6 Atari 3ft SIO Cables: $12.00 (quantity of 6, $2.00 each)
20 or so DSDD disks: $10.00 (hard to find, these are new)
Misc Software as follows:$20.00
Atari Writer Plus (normal/130XE version with disks and manual)
Atari Assembler Editor (cartridge with manual)
Atari DOS 2.5 (disk and manual)
Indus/OSS DOS XL (disk and manual with synchromesh)
Tons of game and demo software on diskette
User assembled documentaion in Atari 3 ring binder

All for $265. Will consider piecing it out if I am left with enough for a complete system to sell as one. Would really like to sell it all as one big package. Make a reasonable offer and I may sell it to you at that. Anything not sold will got to eBay for clearance so act now!

Buyer pays shipping. Shipping to US only unless prepaid. Funds in US$ only. Cashiers check, money order or COD.

Thanx!
Please reply to 'wade.ripkowski@DIESPAMpsc.bellhowell.com' and remove the DIESPAM from the address.

I have contacted a few Atari hobbyists (I have not forgotten about you) about the possibility of creating the ultimate Atari on-line resource center. I have registered AtariWorld.com for such a place. I'm looking for a group to build this site. A site for Atari users by Atari users. I find myself falling farther behind in building the site because of work and family. If you or anyone would like to start on this site I will provide FTP access to the server and all the emails@atariworld.com you want. I need a core group to oversee the basic layout (about 4 people max) and many contributers for content. If you are interested please contact wiz@atariworld.com

Thanks!

Steve,
I think we all pretty much agreed that as long as the files were 90K or
less it would be OK to post binaries that will benefit most readers.
There was a discussion a while back about this. They are generally few
and far between, as well. However, you are correct, in that, files
specific to one or only a couple of readers should be kept to e-mail.

> works quite well, the Atari can see the disk image on the PC,
> files can be copied from the PC to the Atari... BUT not from the
> Atari to the PC!

I just got my SIO2PC cable last week. Took a little bit to figure it all out
but it works perfect. I also have the new dos 800 emulator.

> running on the PC side, I create a new disk image, setting
> it as Drive #2. Then, from the Atari DOS, I format drive #2.
> Works perfectly, formats the PC image successfully.

I used APE to set up a 10248 sector dd disk. Mounted it as D2. Booted mydos
and configured D2 to match the size I set up. Formatted D2. Then wrote dos
files to D2. This 2.5 meg atr file is now bootable in either the emulator or
through APE. I originally thought I would have to use the atari to start
transferring files but the emulator works great on it's own. I have been
copying individual files from my other atr images into this 'disk' so I only
have to mount 1 file in APE to get to all my favorite games. I have also saved
basic programs.

> So now I have D1:, an Atari disk drive, and D2: the PC disk image
> which has just been formatted by the Atari, which can see both.

I wouldn't think of it as a PC image. think of it as a virtual atari disk

> So I try to copy a file from D1: to D2: using the DOS
> Copy command. Error 160 or 165 again! Files simply cannot
> be copied from the Atari drive to the PC using MyDOS 4.5 or
> Atari DOS 2.5 without the operation failing.

D1:*.*,D2: Are you forgetting the comma? No quotations? Wait it doesn't use
quotes does it? I can't remember.

> What is going on? Why can the Atari format a disk image on the
> PC but cannot even copy a file to the same disk image? I must
> be missing something, as I thought the whole point of this

> was to be able to copy files from the Atari to the PC.
>
> Any assistance with this would be greatly appreciated.

In my case there is no difference weather I'm using the emulator or my 800xl. Well the emu disk access is faster :) But it just doesn't cut it for playing games.

Hope this is a little help.
Mark

Howdy Justin (not related to Matthew J. Ratcliff are ye'?) and Ryan.

Issues 44 and 45 of Analog Computing. The first one I saw (and bought and
still have) was 45. I always regretted not being able to buy issue 44 because
of the Armatron article.

I have been able to read and write files from AtariWin 2.3.
Crash Crumble and Chomp is an entertaining Basic game with an anoyingly long winded intro screen. I edited the code to speed things along a bit, and could not save the new file because of an error 165. I found that the files that I was trying to modify were locked from within Atari Dos. I unlocked the files using a Dos Atr and then was able to save files just fine.
In fact, I have a few atr disk images called "blank.atr" that I copy to and then rename as they
get full. Useful for the characters in mail-order monsters and such. Hope that helps!

ANNOUNCING THE OFFICIAL WORLD OF ATARI VIDEO!

It's the only one that can sue the name, show you the speakers, get you behind the scenes, and more! That's right, this is the video to own. If you can't make it to the show, than this will give you the experience(compressed down to two hours - think of it as a Blipvert). If you are going, than this is the perfect way to remember the show. Here's what you need to know.

All the speakers will be present on the tape.

Auctions, dealer rooms, and the Atari Archives Museum will be on the tape.

The BattleSphere Tournement will be on the tape.

Extras like direct feeds from the new games and software being displayed at the fair.

AND MUCH, MUCH, MORE!

How does one get tehir hands on this tape? Easily! Just go here http://home.earthlink.net/~santora/woav.htm and fill out the form. It's that easy! After you receive a confirmation, send off your check or money order to the address you will be given tand then that's it. Soon afterwards you will find yourself in posesion of the only World of Atari Video!

ORDER YOURS TODAY!

>just what is available for game and computer systems.

Oh, his info is useful (but not definitive). He just has some problems getting along with people. He seems to freely offend people, including potential and former customers. He also has been known to lie publicly to defend his ego.

And when he gets caught lying, he makes viscious and maliscious claims against those who caught him. If this were the real world, he would have been sued out of business long ago. I'm surprized no one has pursued him for what he says in cyberspace.

A PLETHORA OF CLASSIC GAMES AT VEGAS SHOW THIS WEEKEND
ï¿½ï¿½ By Keita Iida (keita@mindspring.com), Edited by Donald A.
Thomas, Jr. (curator@icwhen.com)

--At the "World of Atari '98" show this Saturday and Sunday,
attendees will get a rare opportunity to play memorable games
that once were and some that are yet to be. An assortment of
coin-op, console and computer games will be spread out among
the vast convention floor at the Holiday Inn Boardwalk Hotel
and Casino directly on the Vegas strip. With a intriguing blend
of the historic, rare and prototypical offerings, this weekend's
exposition will undoubtedly be one of the most diverse
presentations in the history of video gaming.

One of the highlights of the arcade games on display will be
the first coin-operated game title ever produced. "Computer
Space" was designed by Nolan Bushnell of Nutting & Associates
who later co-founded Atari. Not far away will stand Atari's
original "Pong" which is considered as the first commercially
successful coin-op video game. Also on display will be two
never-released prototypes. The "Freeze" machine is the only one
of two in existence today. It was produced by Atari Games in
1993. "Neutron Star" was the last pinball game made by Atari,
and only one was ever built before Atari decided not to release
the game in arcades. Other playable exhibits include Atari's
"Star Wars", "Battlezone", "Tempest", "Centipede", "S.T.U.N.
Runner", "Gauntlet", "RoadBlasters", "Peter Packrat", "Marble
Madness" and "Road Runner". From Bally/Midway will be "Wizard
of Wor" and from Williams will be "Robotron: 2084".

Among the platform systems on display will be the 5200
SuperSystem, Atari's successor to its wildly successful Video
Computer System (VCS, also known as the 2600). "Tempest",
"Asteroids", "Behind Jaggi Lines", "Final Legacy" and "Super
Pac-Man" will be demonstrated for the first time and "Black
Belt" -- only two are believed to still exist today -- will also

be shown.

Atari's 64-bit Jaguar system roars back into action for this event with the world premiere of the released version of "BattleSphere", 4Play's eagerly anticipated multiplayer space combat game. "Native", by Duranik Software, was never completed but the horizontal shooting game will be demonstrated at the Classic Gaming Show for retro-gaming aficionados everywhere. "JagMania", "Jagmarble" and "Painter" are games developed by amateur developers to round out the stellar repertoire of Jaguar titles to be shown at World of Atari '98.

Attendees will also get to take a sneak peek at several new Atari Lynx games in development. "SFX" and "Ponx" are designed by Carl Forhan. "Hyperdrome" -- a recently announced Telegames title -- will be shown in finished form. "TNT-Terry", a Bomberman-esque multiplayer extravaganza, comes courtesy of Laurens Simonis, and "S.I.M.I.S." is a multigame cartridge consisting of several homebrew Lynx games and demos.

Additionally, game stations will be set up so that players can take a shot at world record scores in games for the Atari 2600, Vectrex, Atari 5200 and other machines. In association with Twin Galaxies, World of Atari '98 will enable players to achieve immortal status. High scores that are confirmed and which top the scores in the Twin Galaxies record book will be entered in next year's edition of the authoritative publication chronicling video games' high scores. Attendees who wish to make an attempt at a record on a specific game should bring their own cartridge as just about every game in history is covered in the Twin Galaxies record book.

"We have a lot of other systems such as Intellivision, Colecovision and Odyssey", states a smiling Mr. Keita Iida, co-promoter and co-editor of Atari Gaming Headquarters (http://www.atarihq.com), "This year, we toast the company that launched 'a thousand chips'."

For more information about World of Atari '98, visit: http://www.atarihq.com/atari98 on the World Wide Web.

1797. Info on XF551 replacement

Newsgroup: comp.sys.atari.8bit
Date: 1998-08-19 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <NGT1CRN@tos.pl.net>
Source record: 60659

I am not fully famaliar with the 8-bit but am trying to help a club member. One person says that you can replace the mechanism with the commonly available drives from old PCs. I understand these are HD drives.

Now some tell me you can't put that in an XF551, - that it accepts only the DD mechanism - others say I can.

What is the situation?

Does someone know how to use the HD mechanism or what changes are necessary so it can be used as a replacement in the XF551?

Does it involve some electronics? Or is it like the situation with the Atari ST where the HD 3 1/2 drive can be used with a few simple fixes, but just operates as a DD drive?

All and any details on this matter would be appreciated.

Mario,
The XF551 uses a 360K DSDD Low Power mechanism. It can be replaced with
a similar PC mechanism, as long as you observe the power limitations of
the XF551's power supply. A higher power usage mechanism can be used if
seperate power for the mechanism is supplied. The reason that you can't
use an HD (1.2MB) mechanism is that the head gap is much finer than the
360K gead gap. This means that if you write disks with the HD drive,
they most likely won't be readable on a stock Atari drive. Physically,
the 1.2MB mechanism will work, but compatibility with other equipment is
lost.
Hope this helps.

> disk.

The ATR format is writable. A couple of thing to check:

Make sure the ATR file is not write protected. From MS-DOS (not Atari
DOS) type, in the correct directory:
DIR /AR *.ATR
You shouldn't see any files displayed, if any are then they are write
protected, use ATTRIB to unprotect them.

Make sure the ATR has not been opened somewhere else by another
program, causing a sharing violation.

Make sure that your ATR image is formated and has been formated with
the same DOS and in the same density as those that you're using to
save the file with. (i.e. if you formated it originaly with DOS 2.5 in
medium density, then try using DOS 2.5, not MYDOS in DD, or whatever).

If all else fails, try creating a brand new ATR, format it, and save
something to the file straight away. See if that works.

My problems are resolved.

After de-selecting "SIO Patch (fast disk access)" in the Atari800win,
I have no problems writing to ATR files. Works great.

Also, SIO2PC now works. I was selecting "Double Density" disk for
a disk image, 133K, when it suddenly dawned on me that it is really
Enhanced Density, not true Double Density. DOS was probably croaking
on the disk format. I select Single Density 133K (enhanced density),
and I can write to the PC no problem.

Thanks to all those who offered insight and suggestions.

Kevin

At least your father didn't put it in the garage and then drop a 350 V8 on the thing and crush it big time.

Course at the time I thought I'd get an 810 disk drive, but now I just have my Atari 800 and 20 game carts. Hopefully if an auction goes well I'll get a 1050 finally after 10 years 8-)

You asked for it, you've got it. I'M BACK!

1) the announcements *were* crossposted. As of 08/17/98
(a.m., two days before I read this message) that changed.

2) useful FREE information is not SPAM. You've got to have better
things to do than attack someone for posting 1 announcement
message a week, don't you?

3) there is commercial content on my site. Add it up, divide it by
the total content and its less than 1% (253KB on a 110MB site,
HTML not included, but it wouldn't make any difference if it was).
There is no charge to access *any* part of my site, and nobody
is forced to hit that ONE bullet on the main page and look at the
FS/T lists.

4) the main point of my site is my hobby -- VIDEO GAMES, and
the dissemination of related material. I am now, and will always
be, a collector first. If I stopped running VGA today I would still
collect (the opposite is not true).

Michael
(I stop reading Usenet and only post occasional announcements
for two years and they STILL attack me. You people are f'n sad!)

Actually, there is only ONE bullet on the main page that links to
my FS/T list section. This can easily be skipped. There are
no other ads, unless you are counting the Link Exchange banner!?!
The actual commercial content of the site is 253KB on a 110MB
site (ie, less than 1%).

Anyway, thanks for the other comments. I'm very glad that you
found the lists useful.

Michael
